TRUSTMRR DATASET PITCH DECK

TrustMRR Revenue & Distribution Analysis

Empirical Market Insights, Sheet Correlations & Investment Playbook from 5,000+ Verified Stripe Startup Listings (2026 Telemetry)

TARGET AUDIENCE
Micro-PE, Rollups & Angel Investors

PRIMARY DATASET
TrustMRR Stripe API Telemetry

ANALYTICAL FOCUS
Valuation & Growth Correlation Drivers

Market Concentration & AI Growth

US Market Dominance

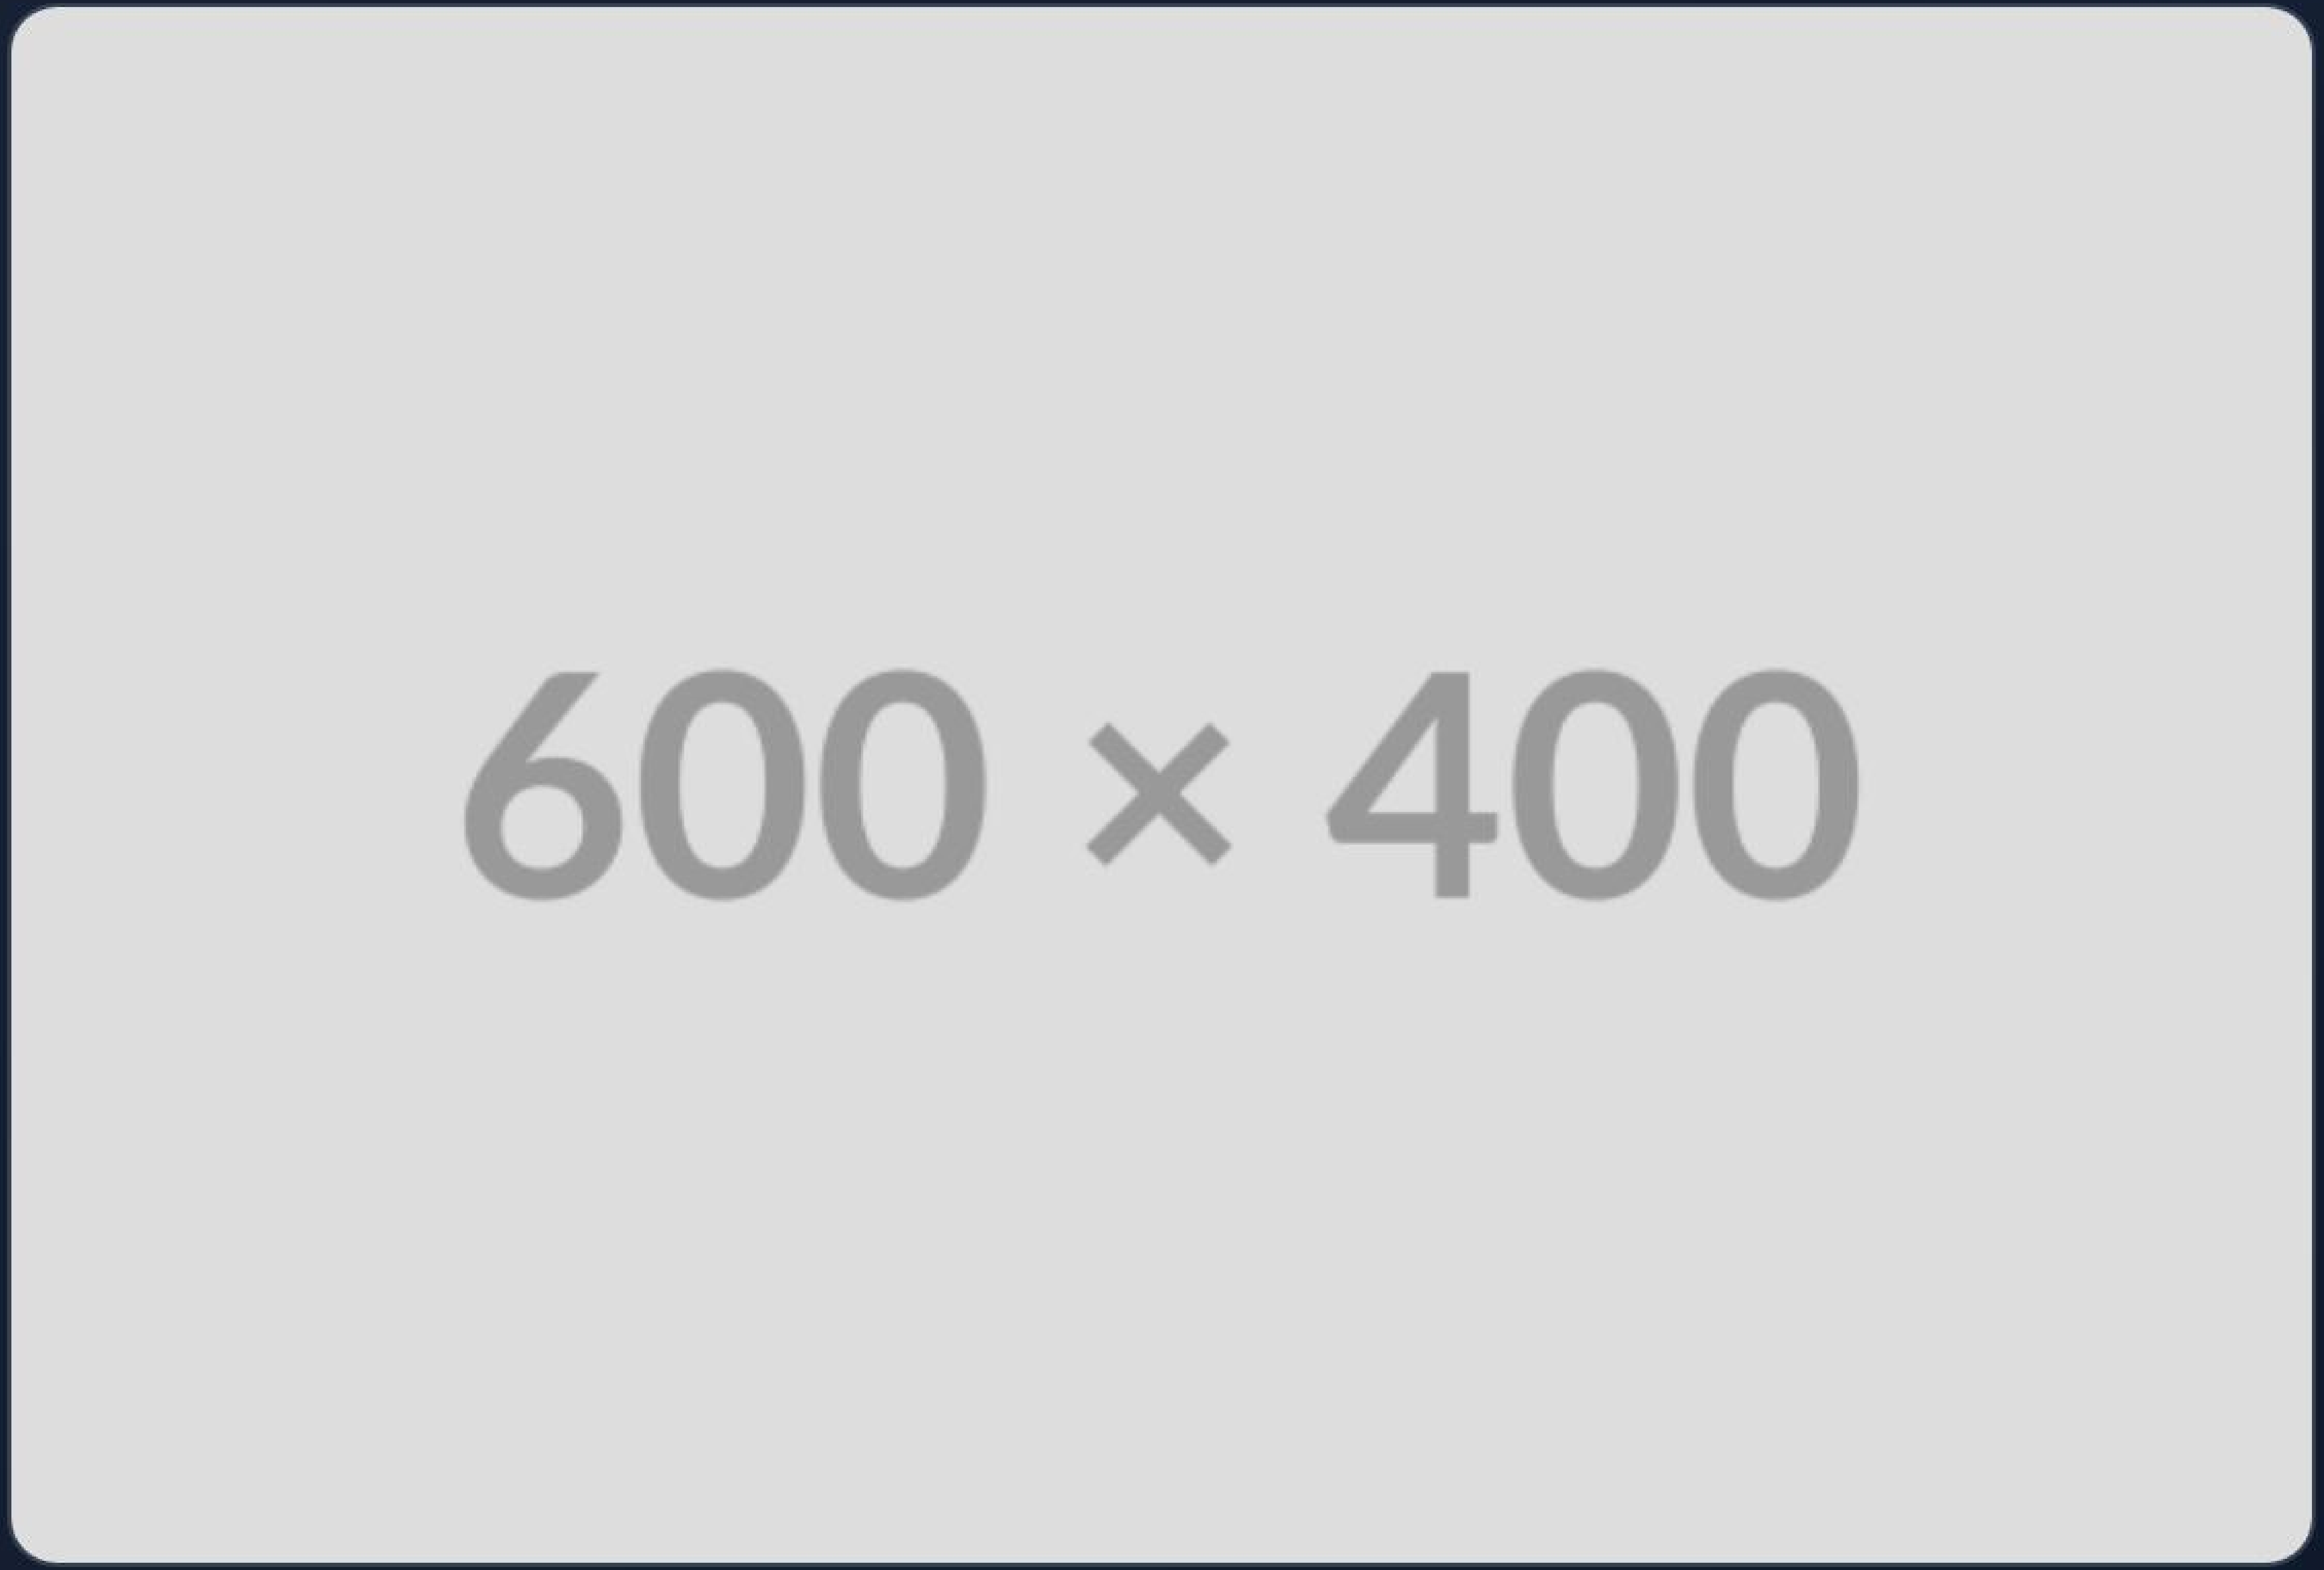
US startups comprise ~48% of listings, capturing the highest tier MRR multiples and VC participation.

Lean Micro-SaaS Hubs

European and Baltic ecosystems (Estonia, UK) drive lean, high-margin indie products with under $5k CAC.

Vertical AI MoM Velocity

AI tools (SEO, Agents, Content) achieve 99.9% MoM revenue scaling with 65-80% gross margins.



Distribution Signals & Operating Models

Founder Audience Leverage

Founders with >10k X/Twitter followers unlock near-zero CAC initial launches, driving rapid early ARR traction.

Stealth Operators (~20%)

One-fifth of dataset listings operate anonymously, utilizing Stripe-verified telemetry to attract buyers without public exposure.

Usage-Based Monetization

Top-quartile micro-SaaS transition to per-unit value pricing ($9–$29 per run), driving superior expansion NRR.

Correlation #3: Revenue vs. Domain Rating

r = 0.43

Moderate Positive Correlation

Sheet Formula: Pearson Corr(Log Revenue, Log DR)
Sample Size: n = 5,130 Startups

SEO Authority is a Strong Metric Proxy

With **r = 0.43 across 5,130 verified startups**, Domain Rating (DR) is the single strongest structural asset in the dataset correlating with top-line revenue.

Compounding Organic Distribution

Startups positioned above the regression trend line leverage programmatic SEO and backlink authority to scale ARR predictably without ongoing ad spend.

M&A Due Diligence Rule

Target startups with DR > 30 offer defensive moats. Low DR combined with high revenue indicates dependence on paid channels or founder personal brand.

Correlation #4: Social Growth vs Revenue Growth

r = -0.03

81% Revenue Velocity Outpace

Sheet Formula: Corr(Log Follower Delta, Log Revenue Delta)
Sample Size: n = 233 Longitudinal Startups

Social Hype Doesn't Drive Scale

The sheet data reveals a near-zero correlation (**r = -0.03**). Audience growth velocity shows zero predictive power for revenue growth velocity over time.

Revenue Outpaces Audience in 81% of Cases

In **81% of tracked startups**, top-line revenue grew faster than social follower count, proving revenue scales via retention, pricing power, and organic product search.

Strategic Takeaway for Buyers

While social followers help launch a product, long-term ARR scaling requires product-led expansion and SEO rather than personal brand hype.

Master Dataset Correlation Metrics

Correlation Pairing (Dataset Variables)	Pearson r	Sample (n)	Growth Direction & Key Insights
Revenue vs. Time in Business	$r = 0.48$	$n = 5{,}567$	Strongest correlation; age & compounding retention drive highest cumulative revenue.
Revenue vs. Domain Rating (DR)	$r = 0.43$	$n = 5{,}130$	**Last 2 (#1):** High SEO authority directly mirrors verified top-line scale.
Revenue vs. Founder 𝕏 Followers	$r = 0.29$	$n = 4{,}410$	Moderate impact; audience accelerates early product launch but reaches a plateau.
Follower Growth vs. Revenue Growth	$r = -0.03$	$n = 233$	**Last 2 (#2):** Zero correlation; revenue outpaced followers in 81% of startups.

Investor Playbook & Buyout Strategy

High-DR Consolidation & Micro-Rollups

Target $1k–$30k MRR startups with strong Domain Rating ($r=0.43$) to consolidate organic search moats and eliminate CAC across portfolios.

Discount Social-Heavily Valued Startups

Factor in the $r = -0.03$ decoupling between follower velocity and revenue growth. Do not pay vanity multiples for social audience size alone.

De-risk Sourcing via Direct Telemetry

Leverage Stripe-verified MRR and historical churn records to perform instant algorithmic due diligence before committing buyout capital.
