Uncovering investments in the SaaS landscape

Arpita Deshpande_C7_D_PGP TBM

TrustMRR is a concentrated panel of 1,000 SaaS start-ups spanning 29 industries, with 12-month revenue available for the large majority

1,000
Total start-ups in the panel

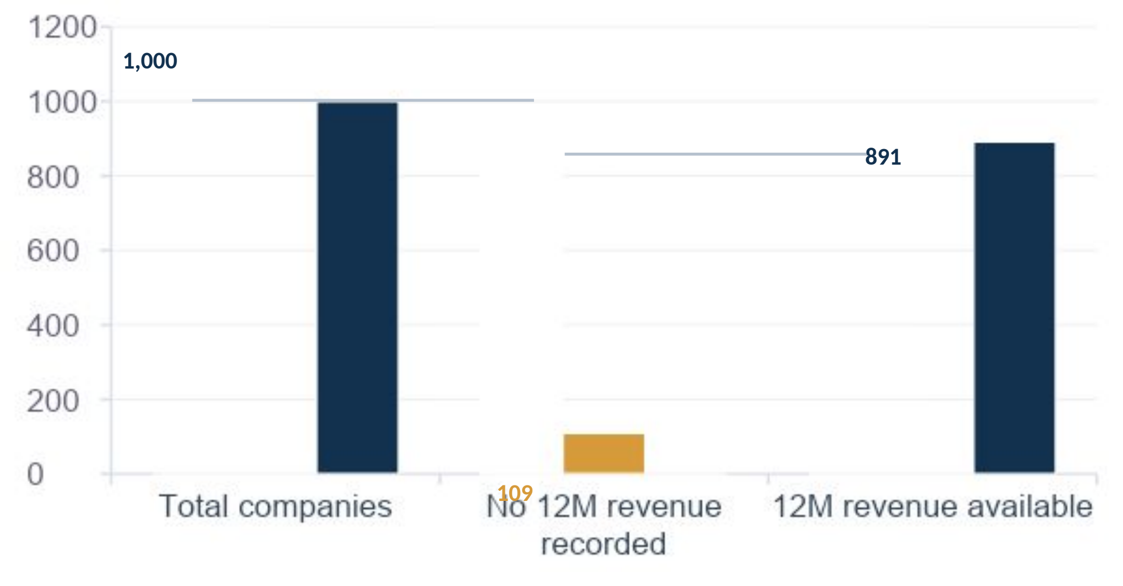
891
With 12M revenue available

274
Untagged or stealth listings

KEY POINTS

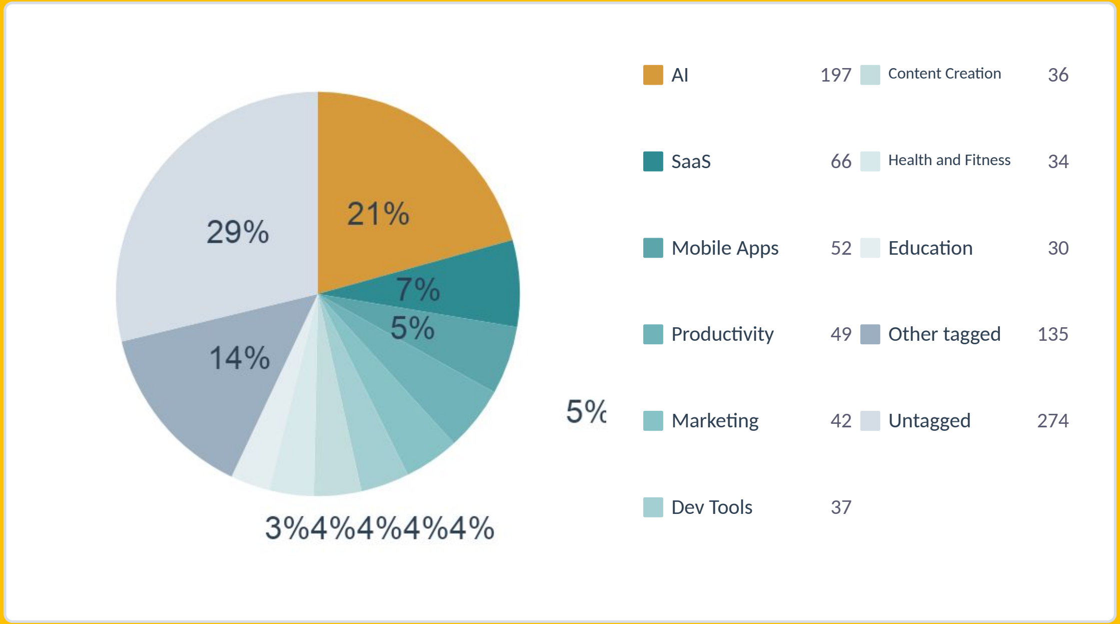
- Trailing 12-month revenue is available for 891 companies and unavailable for 109
- Companies span 29 tagged industries, with AI the largest by company count
- 274 companies carry no industry tag and are shown as Untagged

DATA COVERAGE



Waterfall from the full panel to companies with usable 12M revenue.

INDUSTRY MIX



Among companies with data, revenue concentrates in three sectors, and AI dominates the for-sale pipeline

60%

Share of tagged-sector 12M revenue held by AI, Marketing, and E-comm

24.5%

AI share of tagged-sector revenue

54

AI companies listed for sale

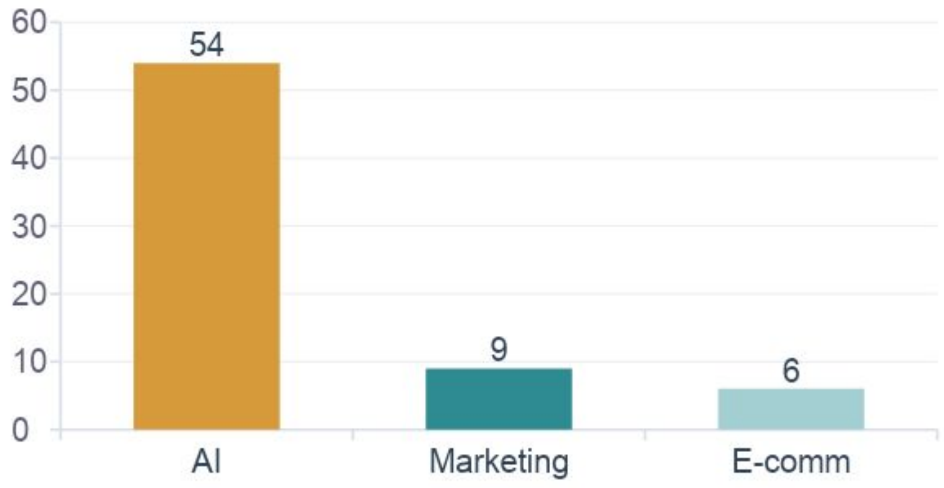
KEY POINTS

- AI, Marketing, and E-comm together hold about 60% of tagged-sector 12M revenue
- AI leads both revenue and for-sale volume, making it the logical target sector
- The acquisition pipeline drops sharply after AI

12M REVENUE BY TOP SECTOR

Values shown in US$ millions.

FOR-SALE COMPANIES IN THE TOP 3 REVENUE SECTORS



AI is the target sector: 54 companies are for sale, with 12-month revenue ranging from about $5 to $507k

54
AI companies listed for sale

$5 to $507k
12M revenue range across the 54 targets

$7.5k
Median 12M revenue

KEY POINTS

- Revenue is top-heavy, with a few names carrying most of the value
- The long tail is sub-scale and likely difficult to diligence efficiently
- Recent momentum is mixed across the top cohort

Company	Description	12M revenue	Recent momentum
PROSP	AI outbound campaigns at scale	$507,250	2.3x (up)
Atlas	AI study and writing tool for students	$390,488	0.5x (down)
Low Content AI	Create low-content books with AI	$242,635	0.7x (down)
Kortex-Notebooklm	Unified searchable AI research repository	$206,255	1.0x (flat)
Based Labs AI	Turn ideas into images and video	$203,918	n/a
Stat AI	AI sports analytics assistant	$173,738	0.9x (down)
Videotok	AI video ads and social content from a prompt	$137,149	0.6x (down)
VoiceCheap	AI video translation and dubbing	$69,923	0.5x (down)
CheatMate	Invisible AI homework and exam help	$60,743	0.7x (down)
Blabla	Convert social DMs and comments into sales	$58,865	0.5x (down)

Top 10 AI targets by 12M revenue. Forty-four further companies are smaller.

The AI targets skew B2C, and cluster tightly around content and media generation

27 B2C
Largest model cohort among the 54 targets

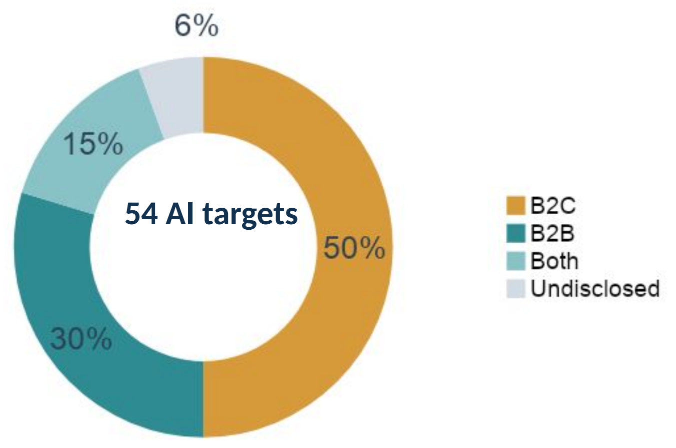
16 B2B
Smaller but more durable buyer base

8 Both
Cross-over tools serving both sides

KEY POINTS

- B2C dominance raises churn risk and lowers deal durability versus B2B software
- Value propositions cluster around content, video, image, and marketing creation
- The language points to a crowded, weakly differentiated AI tool set

BUSINESS MODEL SPLIT



VALUE PROPOSITION WORD CLOUD

Word frequencies from the 54 AI value propositions after stop-word removal.

Domain authority is weak across most targets, signalling thin distribution moats

45 of 54
Targets with Domain Rating available

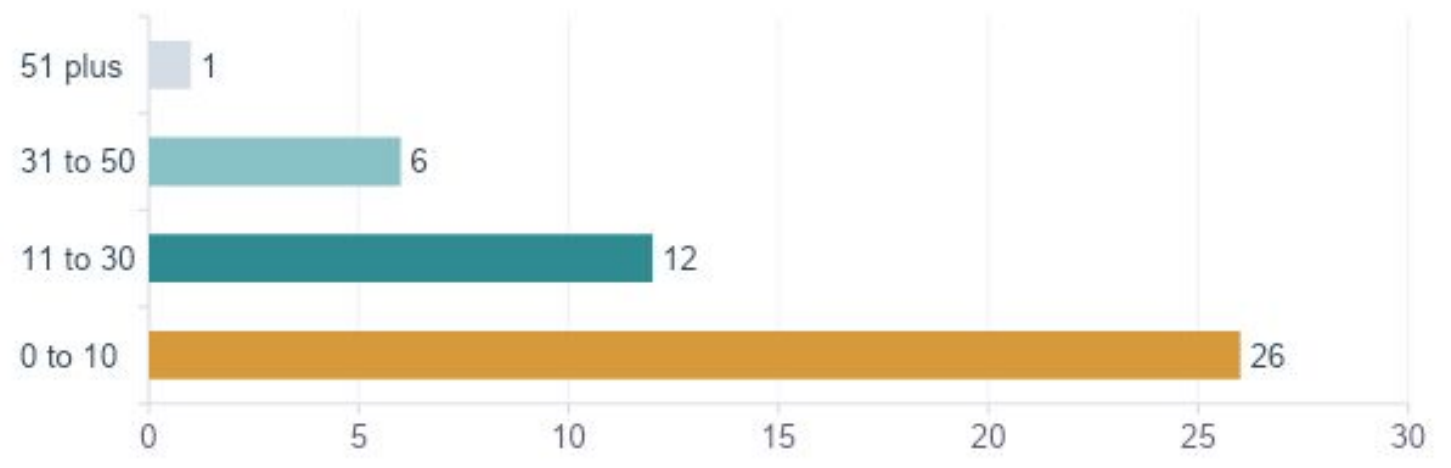
8
Median Domain Rating

26
Targets in the 0 to 10 bucket

KEY POINTS

- Only 7 targets exceed a Domain Rating of 30
- Most AI targets lack meaningful organic-search authority
- Thin discovery moats are a material risk in crowded tool categories

DOMAIN RATING BUCKETS ACROSS AI TARGETS



INTERPRETATION

Low domain authority suggests limited organic distribution strength. For AI tools that rely on discovery, this raises CAC and retention risk.

Range: 0 to 68
Mean: 14.7
Missing: 9 targets

Revenue per subscription varies widely, pointing to very different monetization quality

$17
Lowest revenue per subscription

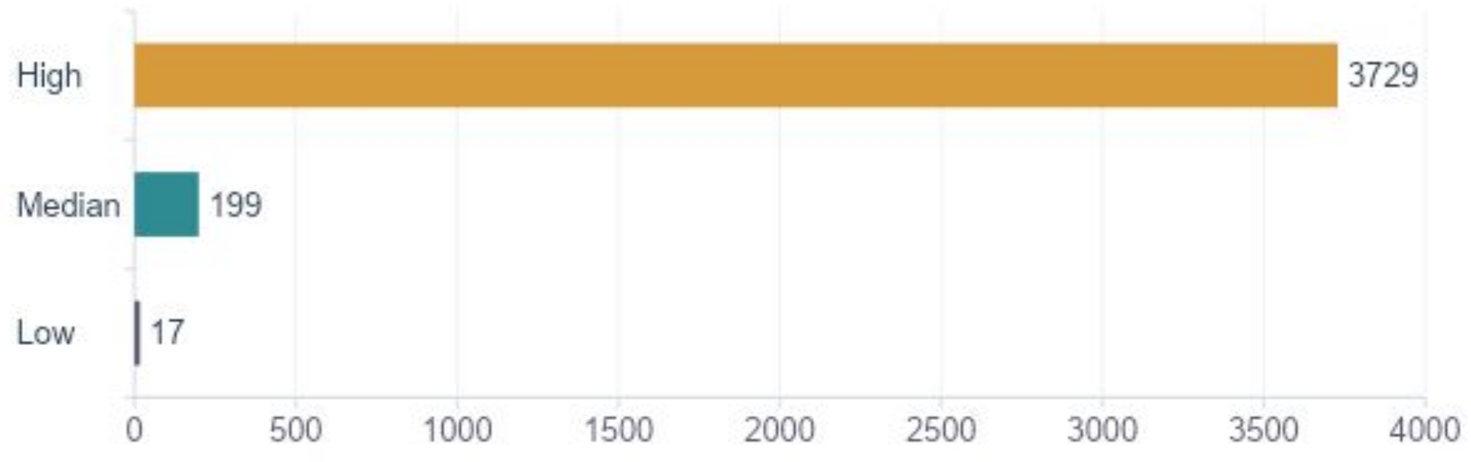
$199
Median revenue per subscription

$3,729
Highest revenue per subscription

KEY POINTS

- The spread separates low-price consumer apps from higher-value prosumer or B2B tools
- Revenue per subscription is a practical pricing-power screen
- Nine AI targets are excluded because active subscriptions were zero or missing

SPREAD ACROSS THE 45 USABLE TARGETS



READ-THROUGH

Low values typically indicate mass consumer apps. Higher values usually map to prosumer or B2B pricing power.

Derived metric:
12M revenue / active subscriptions

Asking multiples are dispersed and often rich, with a median near 4x revenue

4.2x
Median AI revenue multiple

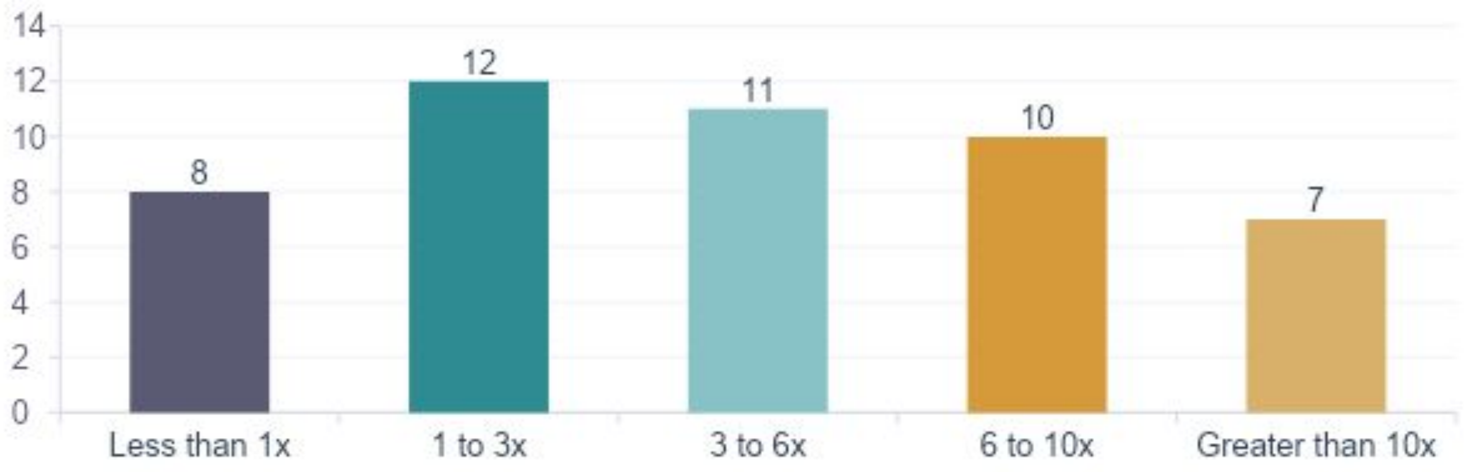
3.0x
Full-panel median benchmark

7
Targets priced above 10x

KEY POINTS

- Revenue multiples span 0.4x to 172x across the usable AI set
- The median sits above the full-panel benchmark, implying hotter seller expectations
- Wide dispersion means price discipline matters as much as sourcing

REVENUE MULTIPLE BUCKETS ACROSS AI TARGETS



VALUATION CONTEXT

P25: 1.5x
Median: 4.2x
P75: 8.2x
Max: 172x

Seller-stated asks do not always reconcile cleanly to 12M revenue, so valuation work needs a full rebuild before any LOI.

Six AI targets clear a real-revenue and rational-price bar

6 of 54
Targets left after the revenue and price screen

$50k+
Minimum 12M revenue threshold

6x or less
Maximum asking multiple threshold

KEY POINTS

- PROSP is the standout, pairing meaningful scale with a sub-1x multiple and acceleration
- The other five have real revenue at reasonable prices but softer momentum
- Retention and turnaround diligence is the gating work for the broader shortlist

Company	Model	12M revenue	Multiple	Recent momentum
PROSP	B2B	$507,250	0.8x	2.3x (up)
Low Content AI	B2C	$242,635	4.4x	0.7x (down)
Kortex-Notebooklm	B2C	$206,255	0.7x	1.0x (flat)
Stat AI	B2C	$173,738	1.5x	0.9x (down)
Videotok	Both	$137,149	0.9x	0.6x (down)
CheatMate	B2C	$60,743	4.7x	0.7x (down)

Screen used: 12M revenue at least $50,000 and revenue multiple greater than 0 and at or below 6x. Thresholds are analyst-set and can be tuned.

Takeaway: Only one name combines scale, price, and acceleration. The rest require a sharper retention and quality-of-revenue diligence lens.

Key additional considerations for investors

Momentum is volatile

The raw 30-day growth field swings wildly, so validate trends with cohorts, not a single snapshot.

Revenue quality

Some targets include one-time or lifetime-deal revenue. Rebuild recurring versus one-time before pricing.

Distribution risk

Most targets have weak domain authority, so paid-acquisition dependence and organic reach need testing.

Disclosure and scale

274 panel companies are untagged or stealth, and most AI targets are small in absolute terms. Confirm identity, ownership, and defensibility before any LOI.

Data caveats

Single-period snapshot. Category missing for 27%, country for 24%, audience type for 29%. Subgroup figures exclude blanks.

Bottom line: this screen is directionally useful, but every serious candidate still needs a full quality-of-revenue, distribution, and ownership rebuild before conviction capital.

Thank you
