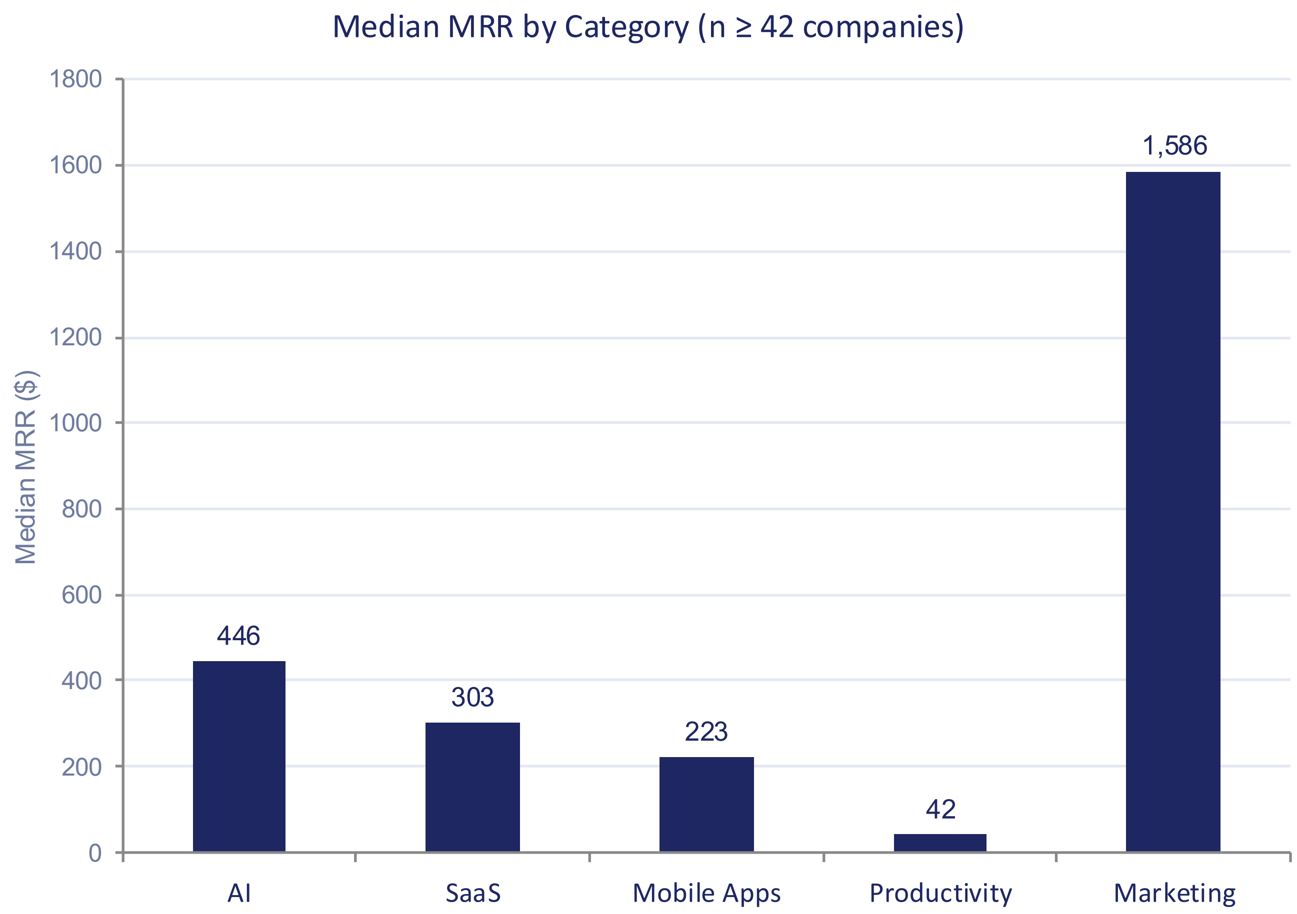
Where Should We Build Next?

Five insights from 1,000 TrustMRR startup listings

Submitted by- Abhinav Dua

Insight 1

Viable Categories to Build In



Why these five

AI leads on depth
197 companies — the largest sample in the dataset — with 54 already resold. Proof of a working market, not a one-off.

SaaS and Mobile Apps add scale
66 and 52 companies respectively, both with real MRR and active resale activity.

Marketing has the outlier MRR
$1,586 median — but only 42 companies. Worth building in, but a thinner bench than AI or SaaS.

Sample size matters: categories under 10 companies (e.g. Customer Support, Marketplace) show high median MRR but too thin a bench to call “viable.”

Insight 2

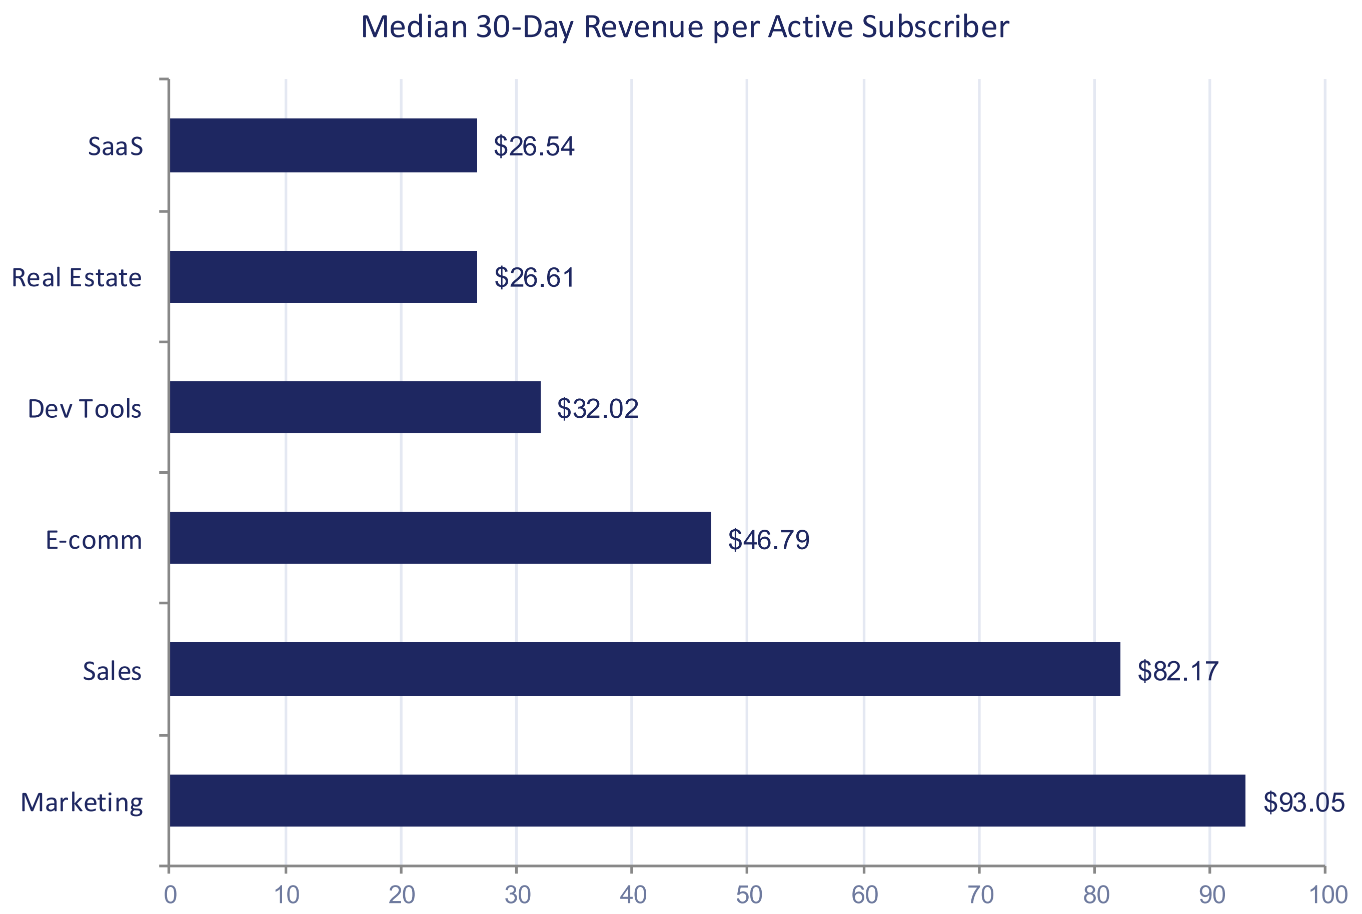
Quickest to Build for Revenue

Revenue per customer, not per company

ARPU — 30-day revenue ÷ active subscriptions — shows how few customers a category needs before revenue adds up.

Marketing and Sales lead
$93 and $82 per customer — far higher-touch, higher-ticket than the volume categories.

AI and SaaS sit lower
~$23–$27 ARPU. They win on volume (Insight 1), not on speed per customer.



Categories shown have ≥ 10 companies with active subscriptions, to keep the median meaningful.

Insight 3

Who to Sell To: B2B vs. B2C Economics

B2B	Both	B2C
$1,036	$352	$181
median MRR	median MRR	median MRR
255 companies	56 companies	401 companies

Takeaway: B2B companies monetize ~5.7x better per company than B2C ($1,036 vs $181 median MRR), despite B2C having far more listings (401 vs 255). Fewer B2B customers are needed to reach meaningful revenue.

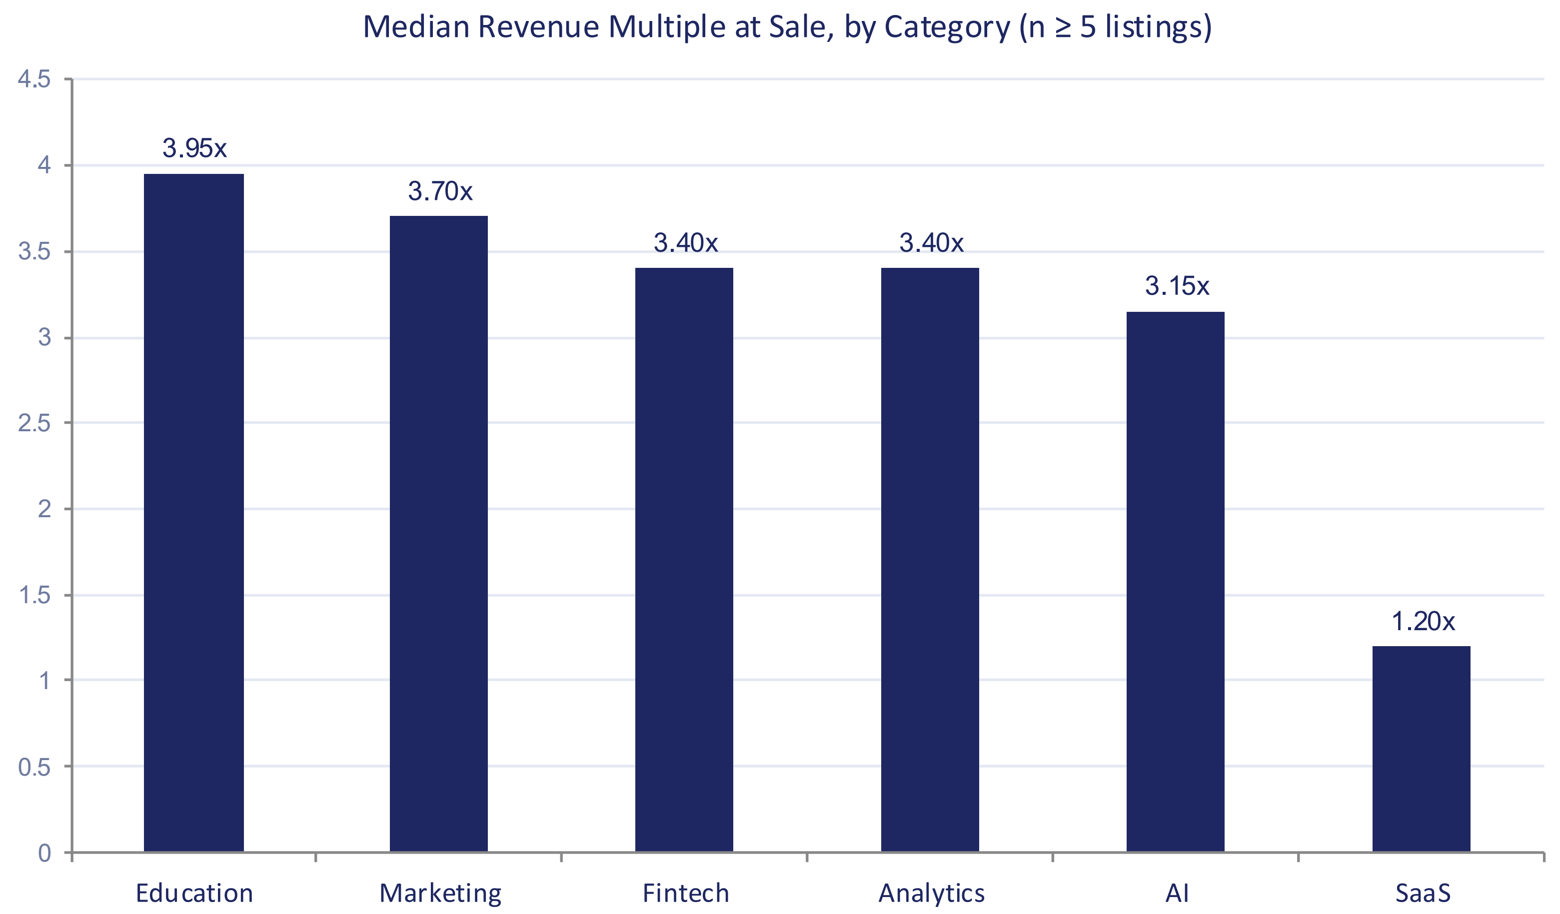
Insight 4

The Resale Market: What's Valued at Exit

26.2%

of all 1,000 listings

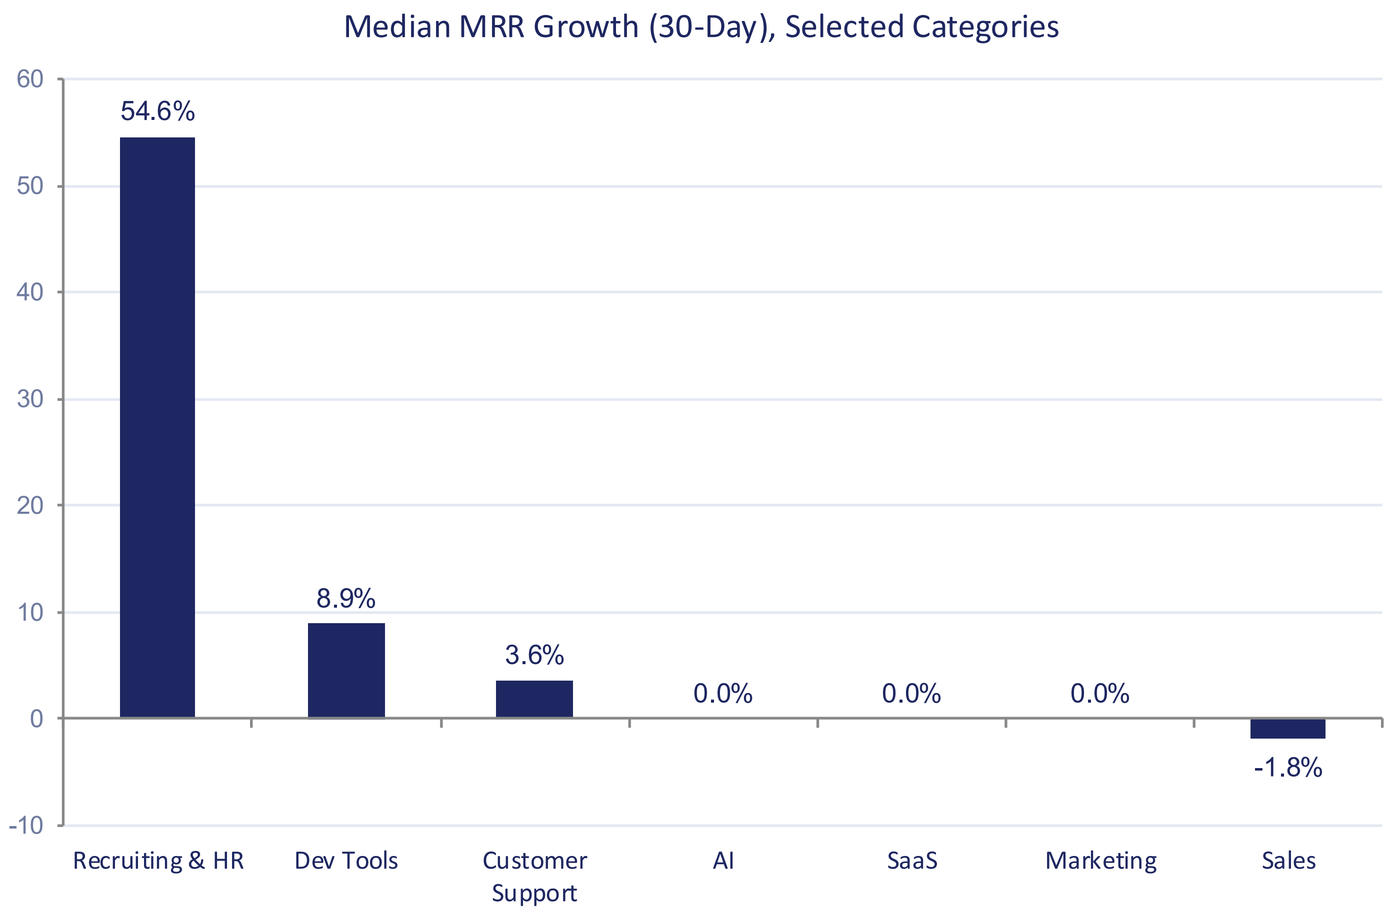
are actively for sale (262 companies) — a sizeable secondary market for anyone thinking about building to exit.



Note: SaaS has the most active resale volume (22 listings) but the lowest median multiple (1.20x) of the group shown — volume and price don't move together.

Insight 5

Small & Accelerating vs. Large & Flat



Reading the pattern

Most of the dataset is flat.
Every large category from Insight 1 — AI, SaaS, Marketing — shows 0% median 30-day MRR growth. Big doesn't mean moving.

Two categories are actually accelerating.
Recruiting & HR (+54.6%) and Dev Tools (+8.9%) are small (6 and 37 companies) but genuinely growing — worth watching as emerging bets, not just safe scale plays.

Putting It Together

Viable categories	AI, SaaS, Mobile Apps lead on scale and sample depth
Quickest to revenue	Marketing & Sales need fewer customers to monetize ($93 / $82 ARPU)
Segment economics	B2B monetizes ~5.7x better per company than B2C
Exit market	26% of listings are for sale; Education & Marketing command top multiples
Momentum	Recruiting & HR and Dev Tools are the only categories with real growth
