Evaluating internet business opportunities using the TrustMRR dataset

Question: What data are we using to make this investment decision?

Takeaway: We analyzed 1,000 real internet businesses using verified revenue and subscriber metrics to identify the most attractive industries for investment.

What is TrustMRR?

TrustMRR is a marketplace where internet businesses are listed with business metrics such as recurring revenue, subscribers, growth, pricing, and other operating data. It provides real company data that can be used to compare industries.

How we compared:

Industries are ranked using an Opportunity Score (0–100), which weighs market size, economics, and growth signals.

Important Limitation: All economic conclusions are based on revenue proxies, not true profit margins.

Education, Marketing, and Health lead the target market

Question: Based on this dataset, where should we invest our time and money?

Takeaway: Education is our primary recommendation due to unmatched **subscriber scale**, with **Marketing** and **Health & Fitness** as strong alternatives.

1

Education

Score: 74.2 / 100

118
Subscribers

$2,141
MRR

Combines the highest median subscriber count with the second-highest recurring revenue.

2

Marketing

Score: 71.4 / 100

16.5
Subscribers

$1,586
MRR

Offers the most stable B2B revenue base and positive category-wide growth.

3

Health & Fitness

Score: 70.6 / 100

58.5
Subscribers

2.77x
Momentum

Exhibits the strongest revenue acceleration among major categories.

Insight on AI: Artificial Intelligence generates the most absolute revenue ($2.35M) but is overwhelmingly the most crowded and competitive category, dropping its opportunity rank to #6.

We prioritized scale, economics, and measurable growth signals

Question: How did we define and measure a good opportunity?

Takeaway: We scored 25 eligible industries out of 100, heavily weighting **measurable revenue and market size** over competition and subjective moats.

Market Size (25%):
Total category revenue and subscriber base.

Economics (25%):
Median Monthly Recurring Revenue Revenue (MRR).

Growth (20%):
Relies exclusively on the **Momentum Ratio** metric.

Competition, Valuations, Moat (30% combined):
Weighted lower due to partial data availability.

Technical Definition: Momentum Ratio

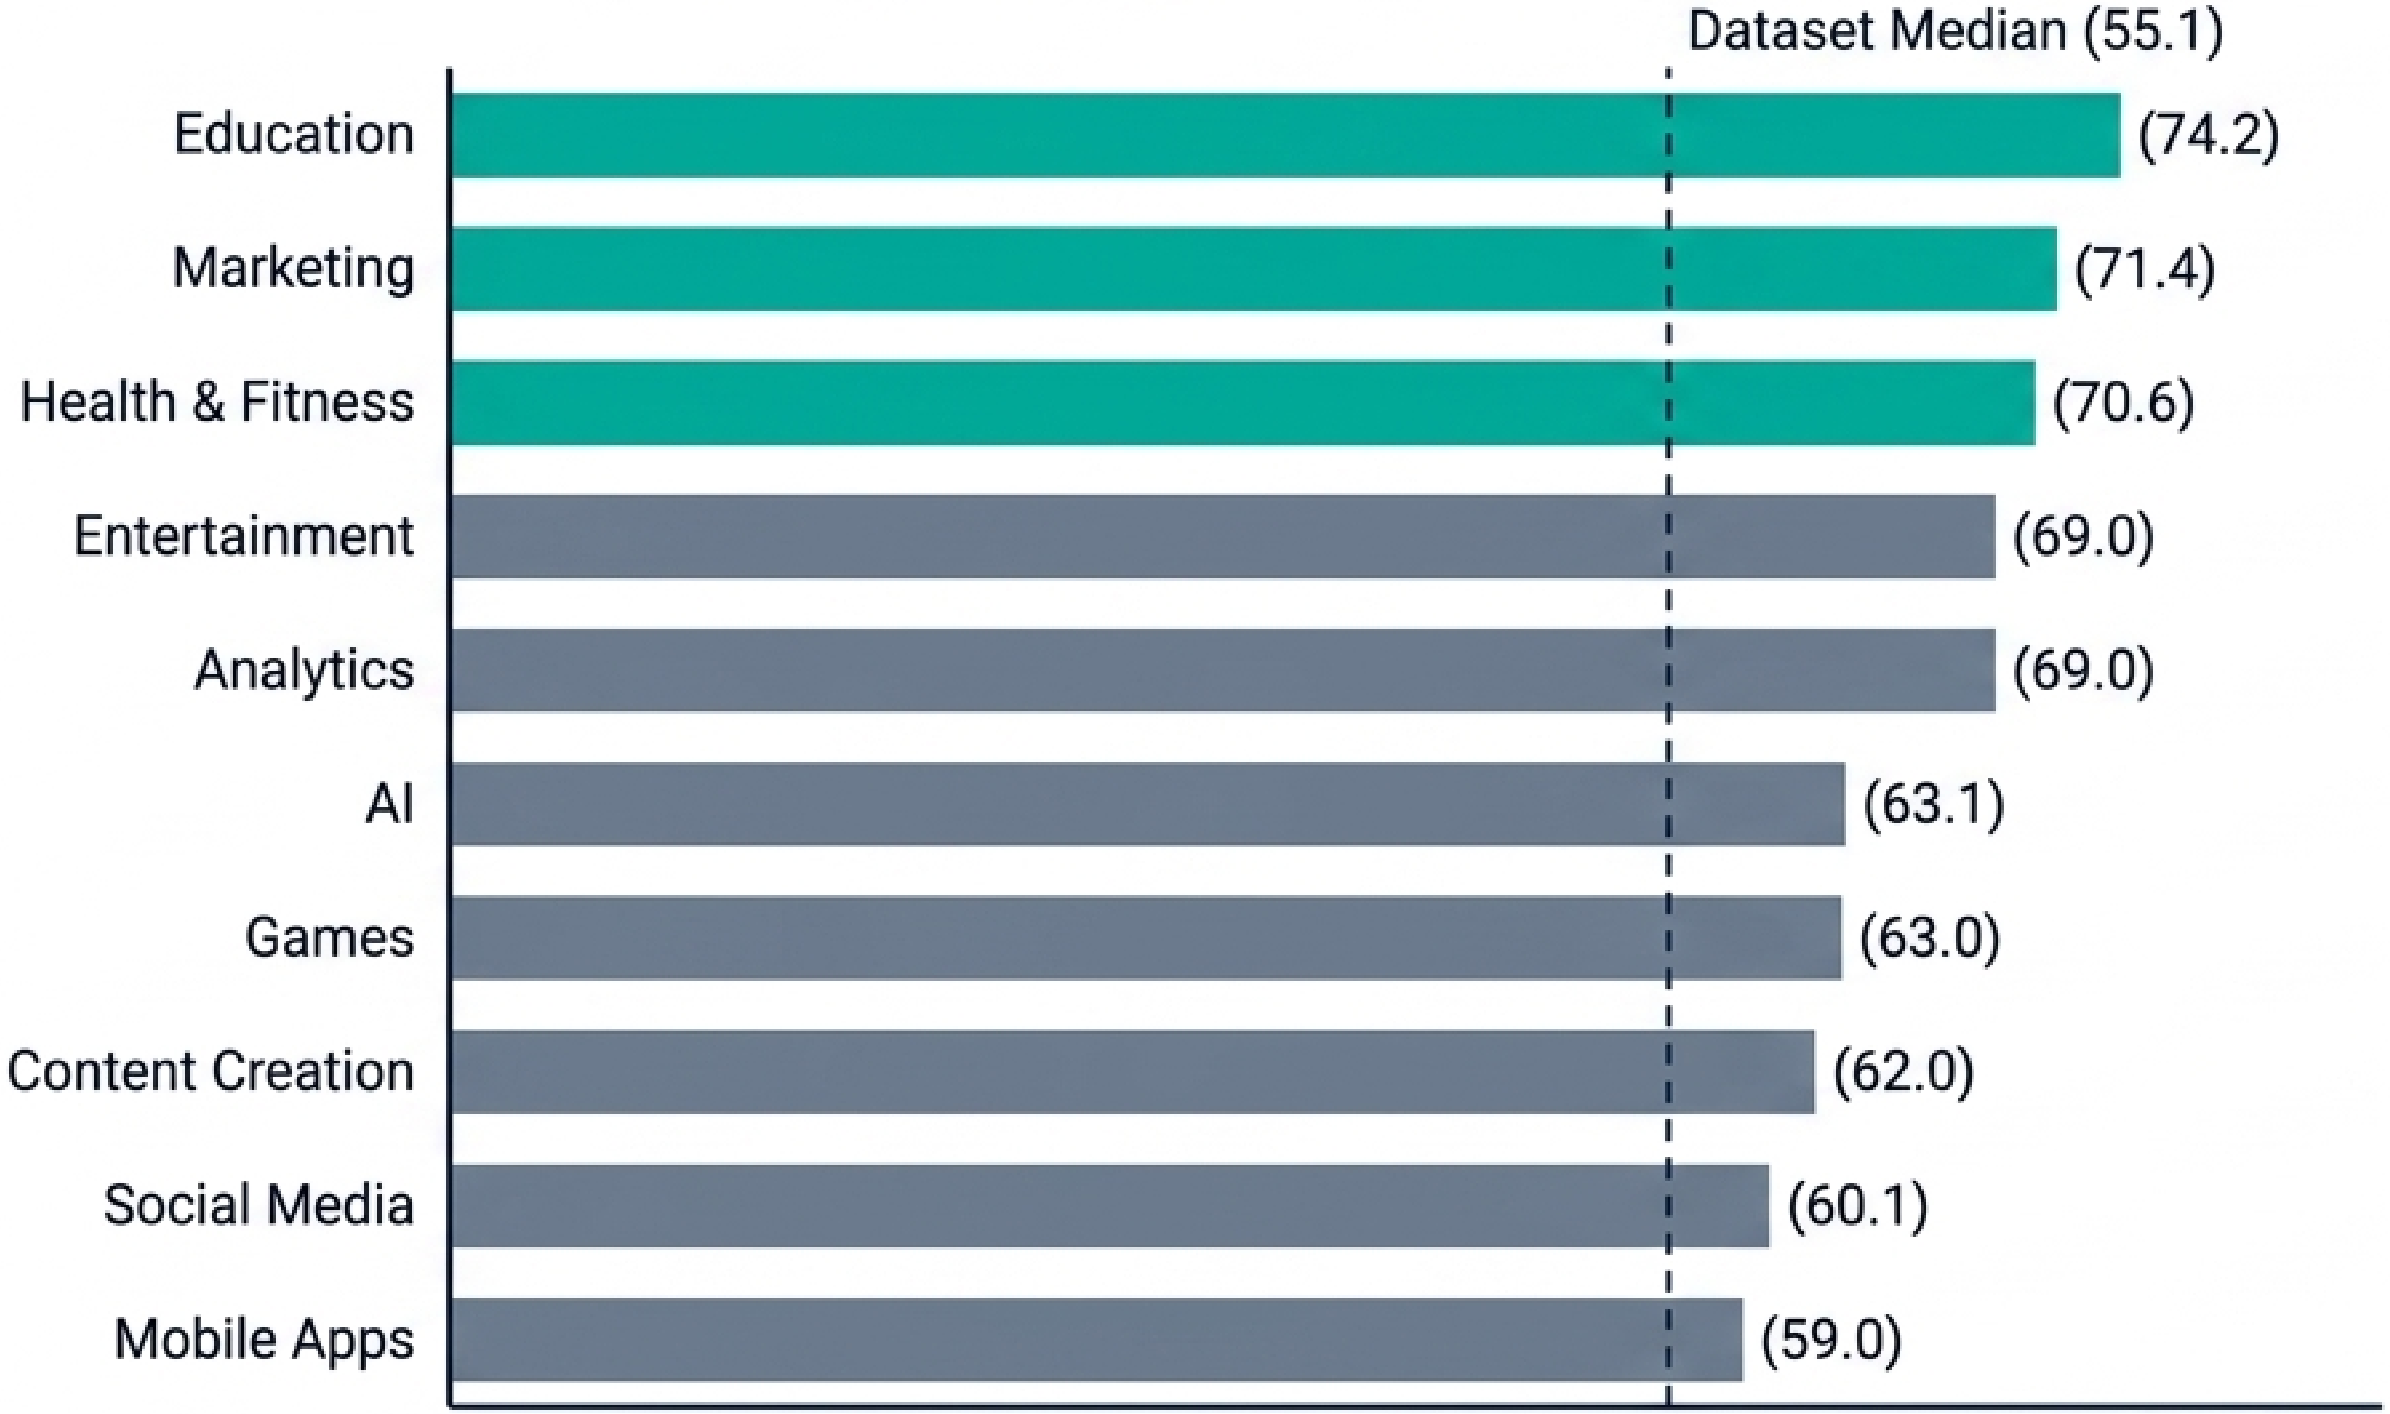
This compares a company's current 30-day run-rate against its trailing 12-month average. We use this proxy because standard 30-day growth was exactly 0.0% for most companies in the dataset.

Only three industries cross the 70-point viability threshold

Question: How do all the industries stack up against one another?

Takeaway: Education, Marketing, and Health & Fitness separate themselves from a pack of 25 industries evaluated.

Top 10 Opportunity Scores (out of 25 categories)



Key Landscape Insights

Dataset Baselines

Across all 25 industries, the average business shows $392 MRR and 20 Active Subscribers.

AI Caveat

AI holds the largest revenue pool ($2.35M) but faces extreme competition (197 listed companies), lowering its overall score.

Sample Size Warning

Games & Entertainment show high momentum but are excluded from top recommendations due to very small sample sizes (under 10).

Education is our primary recommendation due to unmatched subscriber scale

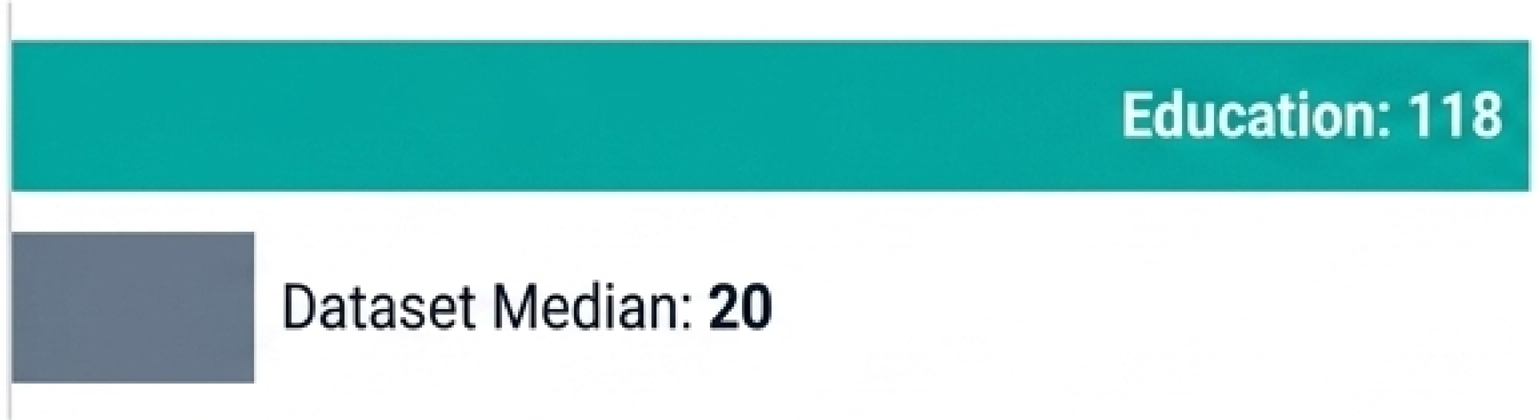
Question: Why is Education our primary investment recommendation?

Takeaway: Education ranks **#1** overall by delivering **nearly 6x the median subscriber base** and the **second-highest recurring revenue** of any category.

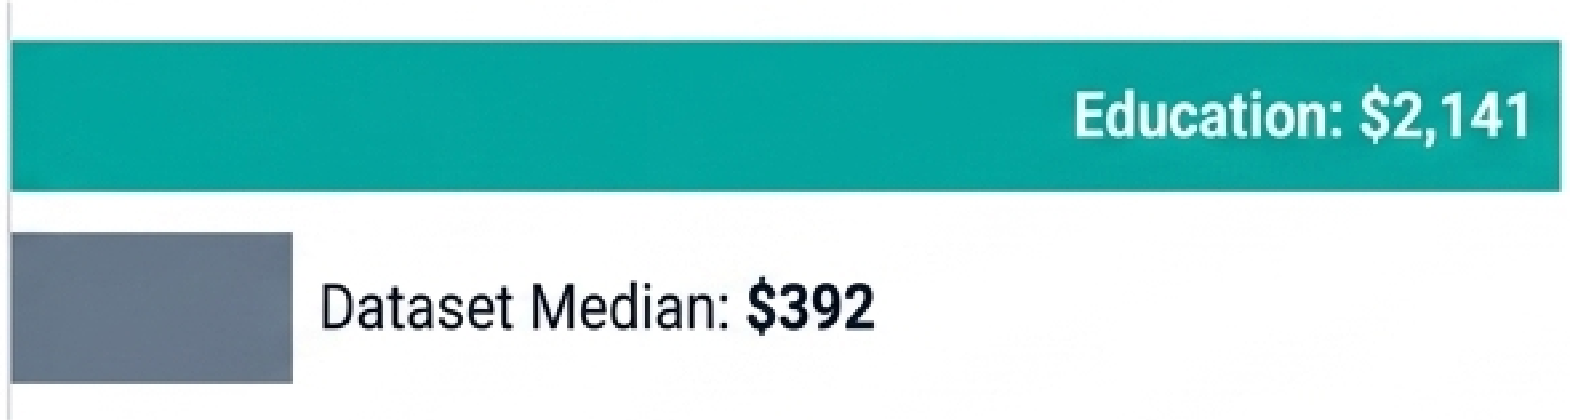
The Bull Case: Massive Audience & Strong Economics

Total Score: 74.2 / 100 | Sample Size: 30 companies

Active Subscribers



Monthly Recurring Revenue



The Bear Case

Identified Risk Factors

Stagnant Month-over-Month Growth
The category median for 30-day growth is 0.0%, relying entirely on a 1.22x momentum ratio for growth signaling.

Sparse Valuation Data
Only 33% of education companies list an asking price, and the mean multiple is heavily distorted by an extreme outlier.

Marketing offers B2B stability while Health provides B2C momentum

Question: If we do not invest in Education, what are the strongest backup options?

Takeaway: Marketing provides a **highly concentrated B2B revenue base**, while **Health & Fitness** offers the strongest revenue acceleration of any major category.

	Option A: Marketing	Option B: Health & Fitness
Total Score	**71.4** / 100	**70.6** / 100
Primary Audience	**78.6%** B2B (Highly Addressable)	**97.1%** B2C
Momentum Ratio	**1.67x**	**2.77x (Highest among top categories)**
Median MRR	$1,586	$392
Key Weakness	Growth is heavily concentrated in a few extreme outlier companies.	Lowest organic search authority/moat among the top 3 recommendations.

Diagnostic Lens

Pursue Education as a primary target while accounting for critical data blind spots

Question: What is the final conclusion and what are the blind spots for due diligence?

Takeaway: We confidently recommend targeting **Education, Marketing, or Health**, provided subsequent investments account for missing **profitability and retention data**.

Where to Invest

1. Education (First choice - Unmatched Scale)

Education is (First choice - Unmatched) scalet of healthcals and altency for sunscments.

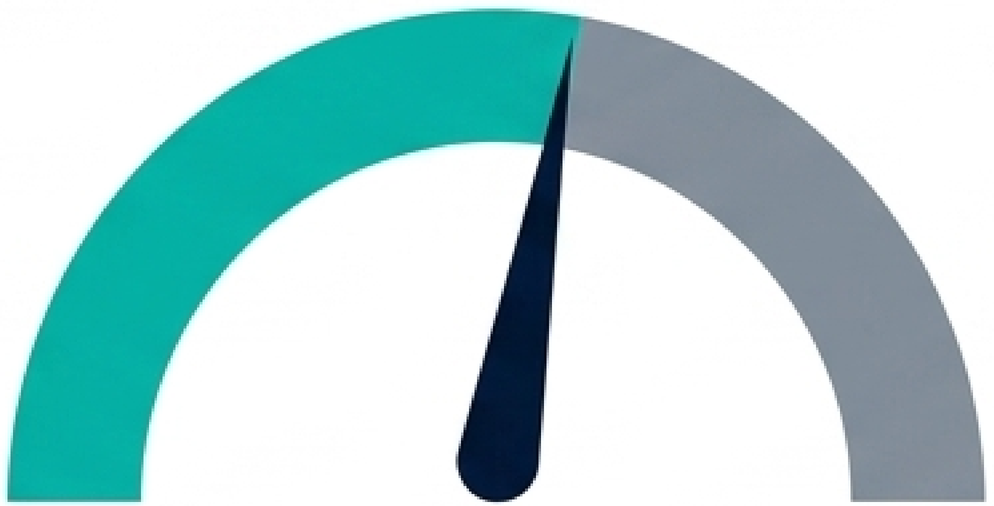
2. Marketing (B2B alternative)

Marketing counts are high, but customer lifespan is based and drimately completet growth.

3. Health & Fitness (Momentum alternative)

Health & Fitness (Momentum alternative) performance, or healthy margins.

Recommendation Confidence



55 / 100

What We Cannot See (Critical Blind Spots)

No Profit Data

High MRR does not guarantee positive unit economics or healthy margins.

No Churn Data

Subscriber counts are high, but customer lifespan is completely unknown.

No Funding Data

Cannot assess historical capital efficiency or past investor validation.
