STARTUP DATA DIVE

TrustMRR

A Verified Snapshot for Verified Startup Revenues

0 CONTEXT

One row is one startup, with its payment provider connected

1,000

startups, each verified through a payment API key

$133.8M

combined revenue over the trailing twelve months

19.7%

report no MRR at all — analysed separately

No history

four revenue windows, not a time series

The four findings ahead

- The shape of the market — and why the average is useless
- B2C recruits more subscribers and earns less for each one
- The largest subscription businesses are the anonymous ones
- Zero MRR is not the same thing as zero business

Source: TrustMRR 1,000-row dataset, frozen 30 July 2026.

The average startup here describes nobody

$16,777
Mean monthly recurring revenue

$1,036
Median monthly recurring revenue

82.2%
of startups earn less than the mean

The mean is 16.2× the median. It is not a typical business — it is the top of the table leaking into the average.

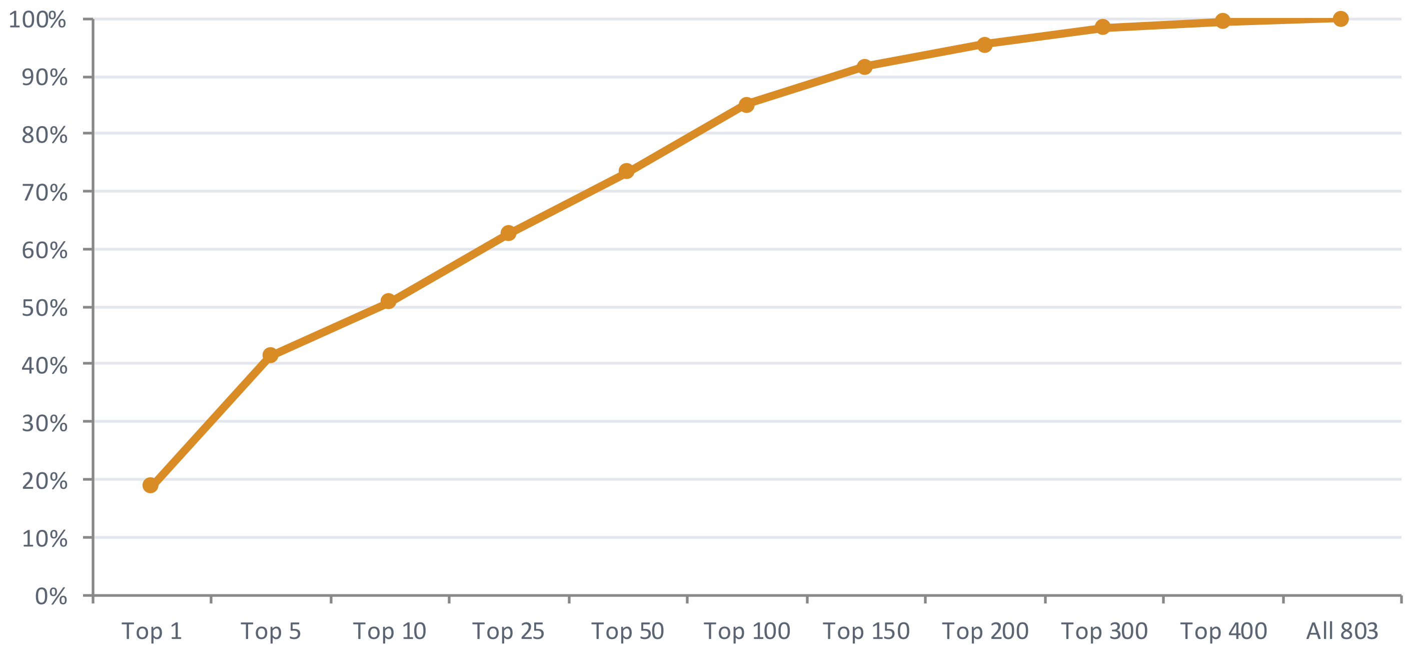
49.1% earn under $1,000 a month

26.4% clear $10,000 a month

48.0% of all MRR sits with 10 firms

Cohort: 803 startups reporting MRR above zero. Combined MRR $13.47M.

Seventeen startups out-earn the other 786 combined



57.7%

of revenue held by the 17 firms above $1M a year

85.1%

held by the top 100 — 12.5% of the cohort

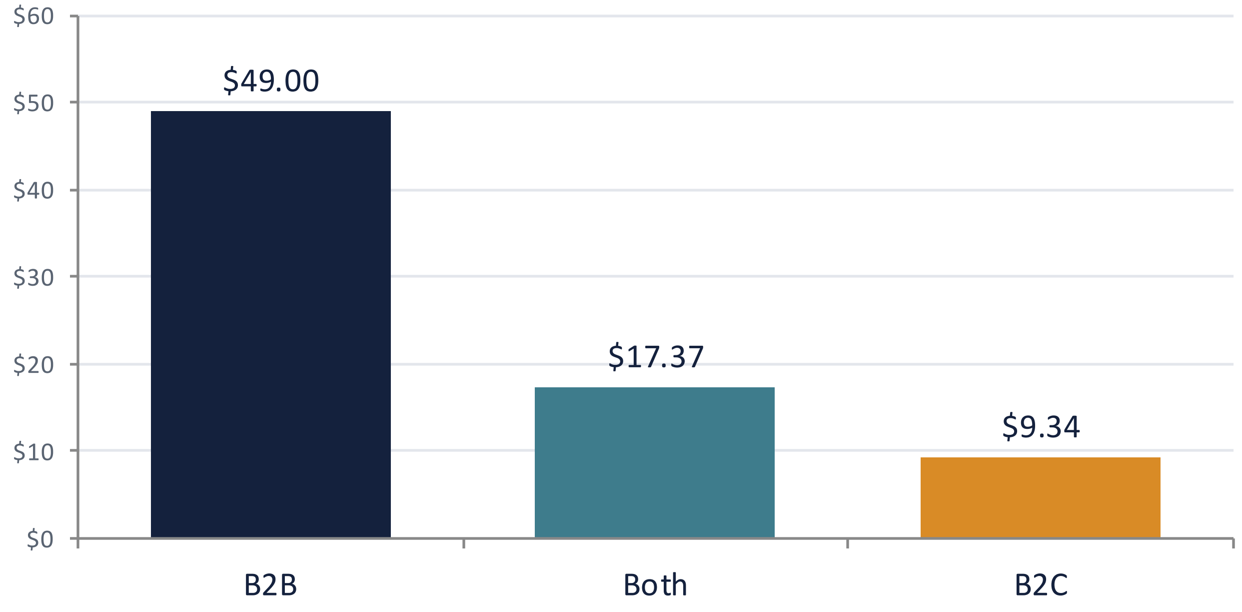
0.05%

held by the 222 firms earning under $1,000 a year

Cumulative share of $132.9M trailing 12-month revenue, firms ranked largest first. Cohort: 803 startups with MRR above zero.

2 PRICE BEATS VOLUME

B2C signs up more subscribers and earns less from each



Median revenue per subscriber, per month

5.2×

the price gap between a B2B and a B2C subscriber

Volume runs the other way

40 median subscribers, B2C

22 median subscribers, B2B

91.7% of B2B firms price above the B2C median.

Cohort: 620 startups with an audience type disclosed and at least one active subscriber.

2 PRICE BEATS VOLUME

Price wins. More customers does not mean more money

B2B

fewer customers, priced high

36.8% of listings

58.4% of all MRR

$1,638 median MRR

B2C

more customers, priced low

55.0% of listings

35.7% of all MRR

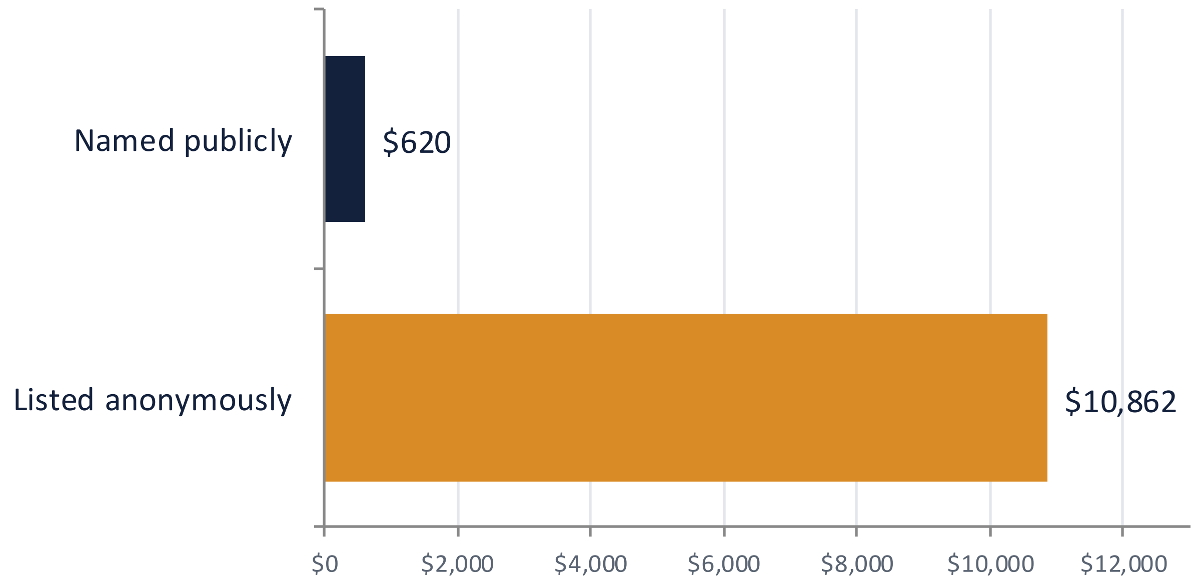
$366 median MRR

B2C is the larger half of the directory by headcount and the smaller half by revenue. The extra subscribers do not close a 5.2× price gap.

Cohort: 620 startups with an audience type disclosed. MRR shares computed across that subset.

3 WHO IS HIDING

The largest subscription businesses tell you the least



Median monthly recurring revenue

17.5×

the MRR of a named listing, at the median

14.4% of listings are anonymous

28.1% of all MRR is theirs

36 of 100 top earners are anonymous

314 vs 26 median subscribers

Cohort: 803 startups with MRR above zero, of which 116 are listed without a company name.

4 THE OTHER 197

Zero MRR is three different things wearing one label

89 45% of the 197

Never started

No revenue, ever.
No subscribers, no traffic, median domain rating 0.

73 37% of the 197

Stopped

Earned once and went quiet.
Median lifetime revenue $39.
Only 24 sold anything last quarter.

35 18% of the 197

Trading, just not on subscriptions

Holds 92.8% of the group's revenue.
Median domain rating 20 — above the subscription cohort's 13.

Filtering on MRR deletes 35 working businesses — pay-once, lifetime licence and per-job pricing — including one earning $399k a year.

Cohort: the 197 startups reporting zero MRR. None has an active subscription — the field is a missing business model, not a low number.

WHAT THE FOUR HAVE IN COMMON

Every headline number in this directory is set by a handful of firms you cannot see

01 **The distribution is not normal**

Ten firms hold half the revenue, so means, totals and averages all describe the top of the table rather than the market.

02 **Price sets the ranking, not reach**

B2B is the smaller half by headcount and the larger half by revenue. Subscriber counts do not close a 5.2× price gap.

03 **The top is largely anonymous**

116 listings carry no company name and 28.1% of the MRR. Any visible-only analysis is an analysis of the smaller businesses.

04 **The filter you choose is an argument**

Excluding zero-MRR removes a business model, not just weak firms. State the cut on the slide or expect to be asked.

Four things a sceptic will ask

Missing data is not random	Country is blank for 24% of rows and category for 27%, clustered on the same anonymous listings that hold the most revenue. Every segment cut quietly excludes the top of the market.
No time series exists	Four revenue windows and a 30-day growth figure. Nothing here can show a trajectory, and growth reads exactly 0.00% for 30% of rows.
The arithmetic does not always hold	32 rows report 30-day revenue above their 3-month revenue, which cannot be true. Medians used throughout for this reason.
Coverage varies by finding	Findings 2 and 3 rest on the 620 to 803 rows with the relevant fields disclosed, not on all 1,000.
