STRATEGY ENGAGEMENT · DATA FROZEN 30 JUL 2026

Inside TrustMRR

What if you could invest in a profitable startup the way you buy a house?

1,000 verified businesses · $13.5M monthly recurring revenue · 262 for sale

WHAT IS TRUSTMRR

The "Zillow" for profitable internet businesses — where the income is proven by real payment data, not promised.

1 → 2 → 3 → 4 → 5

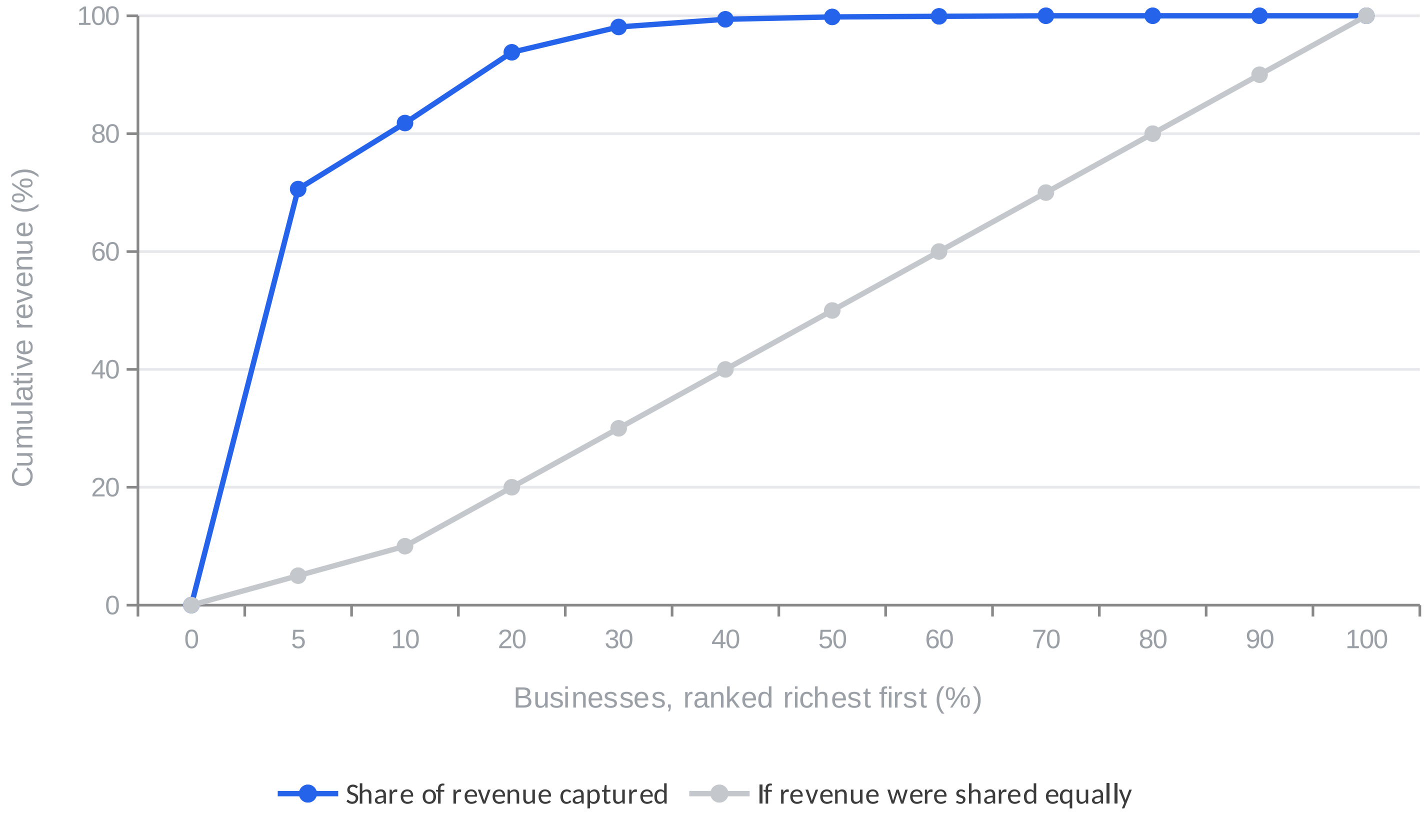
1	2	3	4	5
Founder	**Connects Stripe**	**Revenue verified**	**Business listed**	**Buyer acquires**
builds an online business	links real payment data	income audited by the platform	published for all to see	purchases a proven asset

The key difference: a pitch deck shows a founder's hopes; TrustMRR shows what Stripe actually processed — dyno-verified revenue, not brochure horsepower.

1,000	**$13.5M**	**262**	**100%**
verified businesses	monthly recurring	for sale (≈26%)	revenue verified

THE SHAPE OF THE MARKET

This is a winner-take-most market: the top 10% of businesses earn 82% of all the money.



26% — **TOP 1**
of all revenue — one company

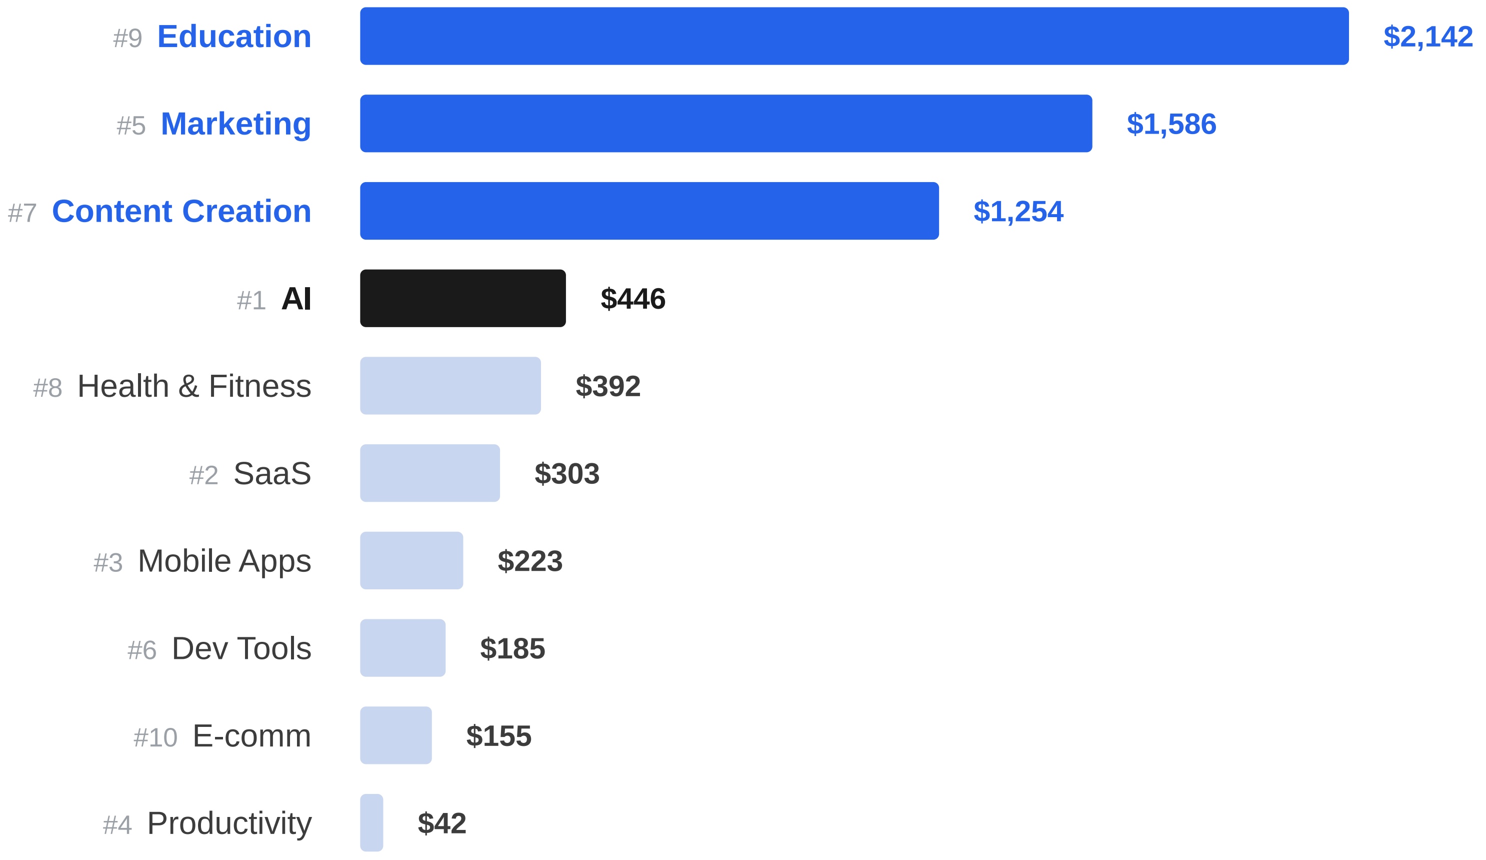
82% — **TOP 100**
earned by 1 in 10 businesses

$282 — **MEDIAN**
what a typical business makes / mo

THE CROWD VS. THE MONEY

Founders are chasing AI — but AI isn't where the money is: "boring" niches out-earn it 3–5×.

AI = 1 in 5 listings · the most-built category. *Bars: median monthly revenue · #N = rank by how many exist*



AI

$446

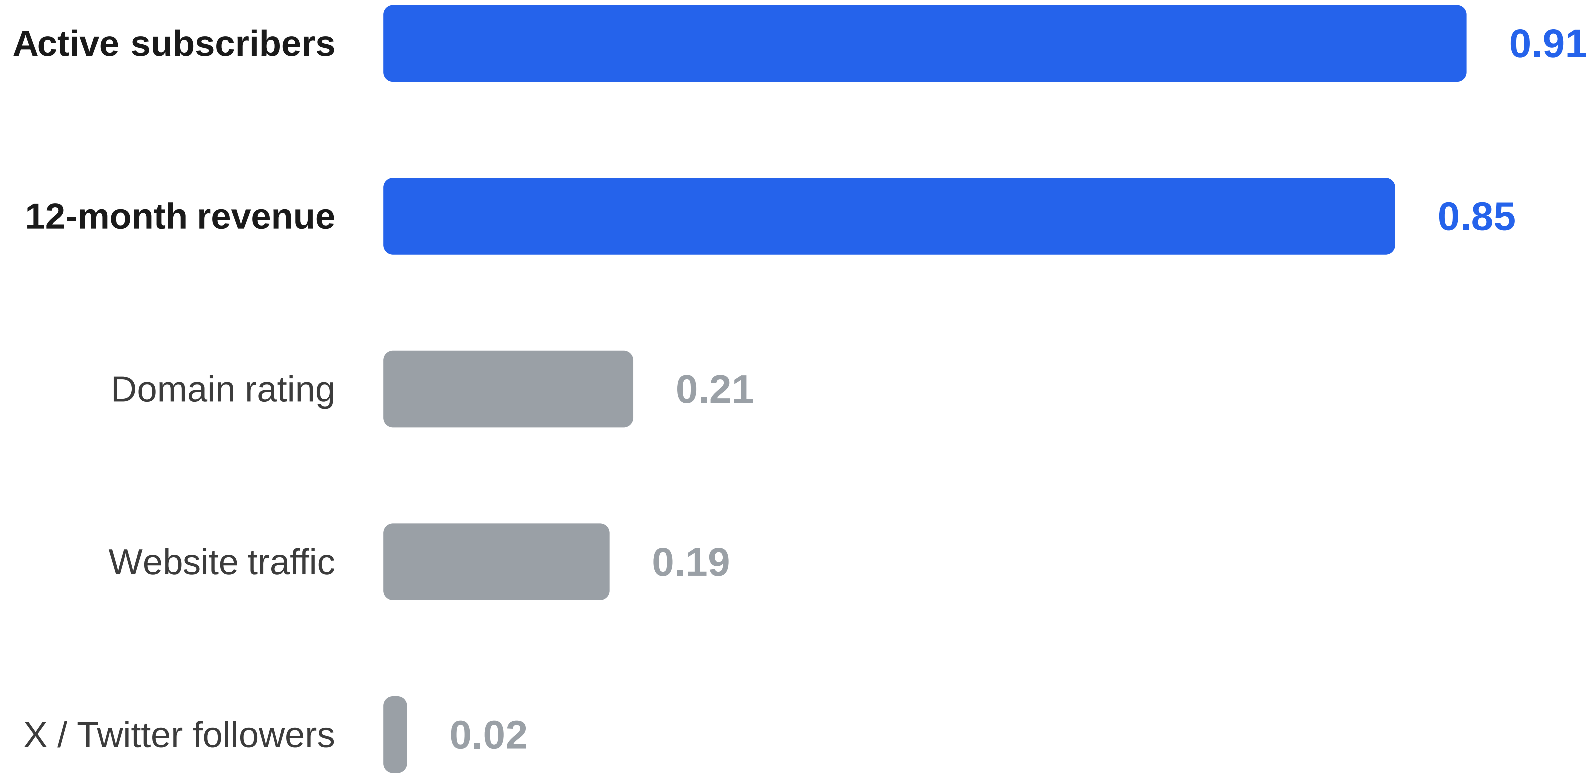
median MRR — the most-built category earns barely a quarter of Education's $2,142.

Education

$2,142

median MRR — only #9 by count, yet the top earner. Thin field, real willingness to pay.

Followers don’t pay the bills: paying subscribers predict revenue almost perfectly — audience size barely at all.



In diligence: count the paying subscribers. Ignore the Twitter following and the pageviews — that’s paint, not engine.

correlation with monthly revenue (1.00 = perfect)

READ THE FINE PRINT

One in three “startups” is already dead — size the market on the survivors, not the headline count.

All 1,000 listings

197

earn $0 this month

the walking dead

101

never earned a cent

launched, never sold

108

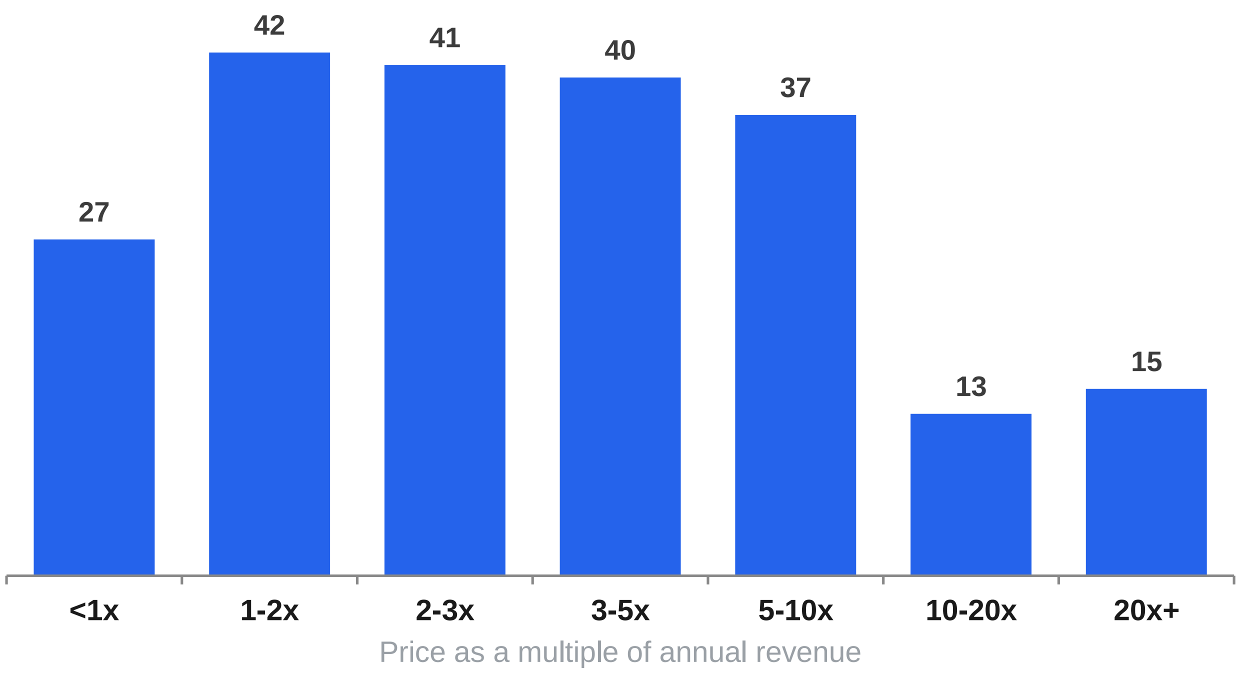
churned to zero

had customers, lost them all

The denominator that matters is ~650 live businesses — not 1,000.

HOW ASSETS ARE PRICED

Assets trade at ~2.3× revenue — and the market ignores quality, which is exactly the arbitrage.



2.3×

median multiple (B2C) — your anchor. Ignore the ~8× average; a handful of sellers price dreams.

THE ARBITRAGE

0.22 & ≈0.00

how much domain authority moves the price, then the multiple — barely, then not at all. Buy the moat sellers forgot to price.

A clean buy-list exists at liquidation prices — and a fantasy tier to walk straight past.

BUY — cheap + growing

Linkeddit
Sales

0.2×

$1,036/mo · +90% growth · $5,000 ask

Leadbomb
SaaS

0.6×

$3,633/mo · +39% growth · $25,000 ask

AVOID — fantasy multiples

Rolely
Education

327×

$17/mo · $4,000 ask · denominator ≈ 0

Abun.com
AI

172×

$274/mo · $50,000 ask · shrinking

The rule: *buy below ~1× with growth; hard-pass any multiple above ~20× on sub-$1k monthly revenue.*

EXECUTIVE SUMMARY

The market's value is extreme, concentrated, and mispriced — and that is the opportunity.

1	**Concentrated**	Top 100 businesses earn 82% of all revenue; the median makes $282/mo.
2	**Misdirected**	AI is 20% of listings but among the least profitable; niches out-earn it 3–5×.
3	**Vanity ≠ value**	Followers correlate 0.02 with revenue; paying subscribers, 0.91.
4	**Polluted base**	~1 in 3 businesses is dead or never earned — size on survivors.
5	**Mispriced**	Assets trade at ~2.3× revenue; quality moats go unpriced → arbitrage.

IF I HAD $100,000 TO INVEST TOMORROW

Where I'd put the money — and what I'd walk past.

BUY

Cheap + growing + moated

Sub-1× businesses like Linkeddit (+90%/mo) — real revenue at liquidation prices.

AVOID

Fantasy multiples

300× on $17/mo. Anything above 20× on sub-$1k revenue is a story, not a business.

THE PROFILE

The ideal target

≥$1k MRR, growing, subscriber-driven, ≤2.5× revenue, strong domain — all five.

The biggest hidden opportunity

A market that prices revenue but ignores quality is waiting to be arbitraged — buy the moats before it learns to charge for them.
