STARTUP PORTFOLIO REVIEW

Executive Summary

Five insights the board needs before the detailed review — revenue is concentrated, growth is polarized, and nearly a fifth of the portfolio has yet to monetize.

1. **Revenue is highly concentrated**
   Aggregate MRR ~$13.47M vs. a median startup of just $282 MRR.
2. **Growth is polarized, not positive**
   34.4% growing vs. 33.7% declining — almost an even split.
3. **1 in 5 startups earns $0 MRR**
   19.7% remain pre-revenue despite being listed.
4. **AI + subscriptions dominate**
   AI is the largest category (197); 636 startups run on Stripe.
5. **The U.S. leads the ecosystem**
   258 of 1,000 startups (25.8%) are U.S.-based.

PORTFOLIO AT A GLANCE

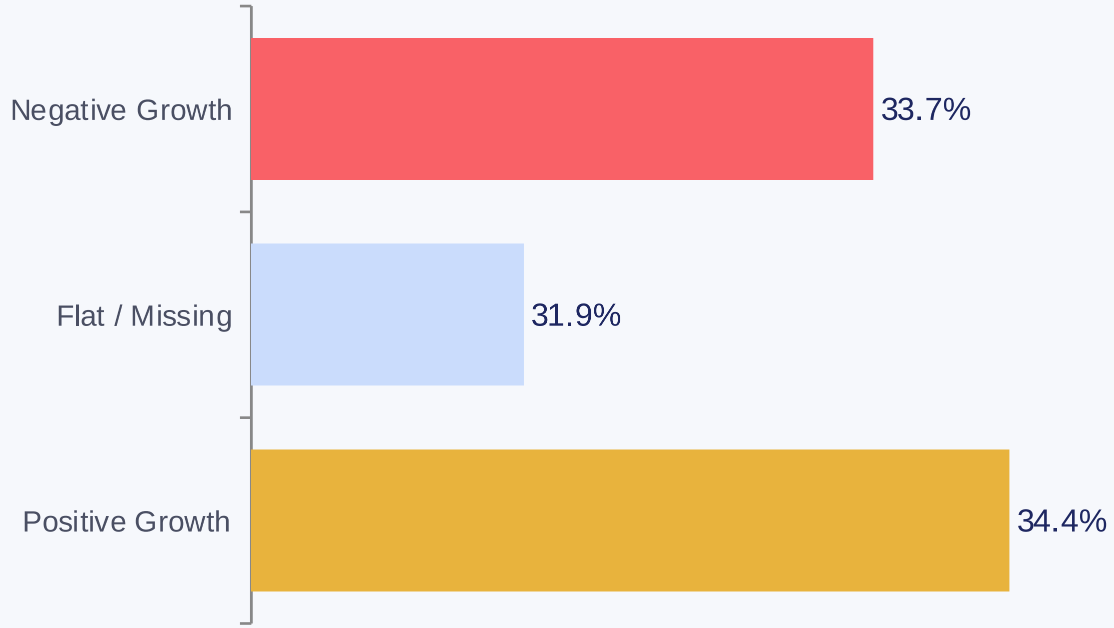
1,000	Startups tracked
$13.47M	Aggregate MRR
$282	Median MRR
$3.57M	Highest MRR
19.7%	Zero-MRR startups

REVENUE & GROWTH ANALYSIS

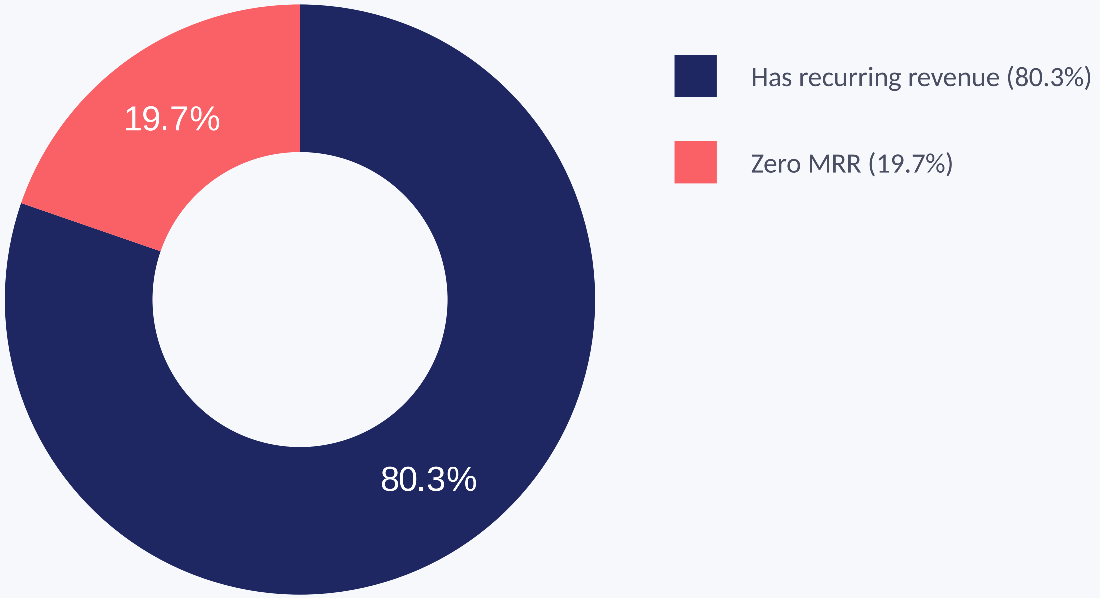
Revenue is concentrated; growth is a coin flip

$13.47M Aggregate MRR	**$282** Median MRR	**$3.57M** Highest MRR	**19.7%** Zero-MRR Startups

30-Day Revenue Growth Status



Recurring Revenue Establishment

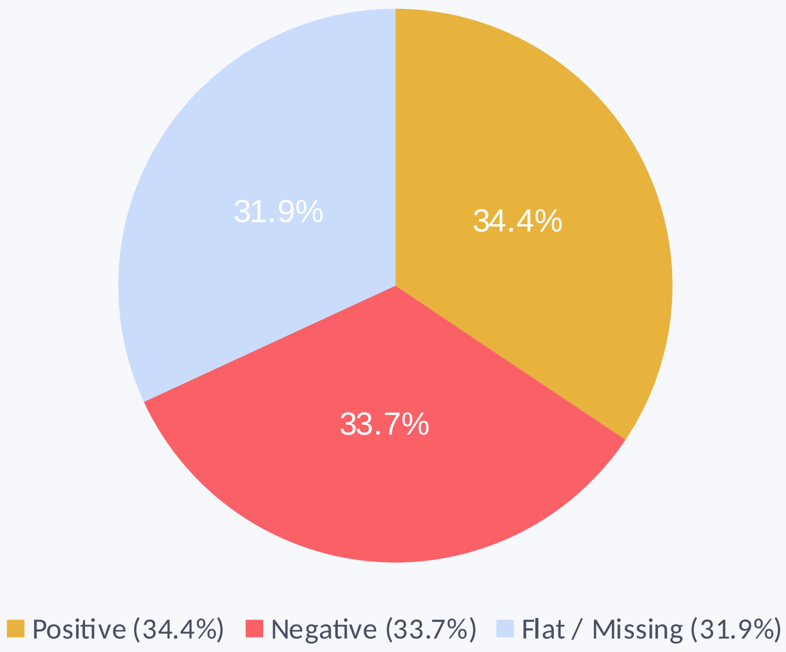


Board takeaway: portfolio averages overstate the typical startup — segment by revenue tier rather than relying on aggregate MRR.

GROWTH ANALYSIS

Growth is fragmented, not broad-based

Growth Distribution



Growth Risk Assessment

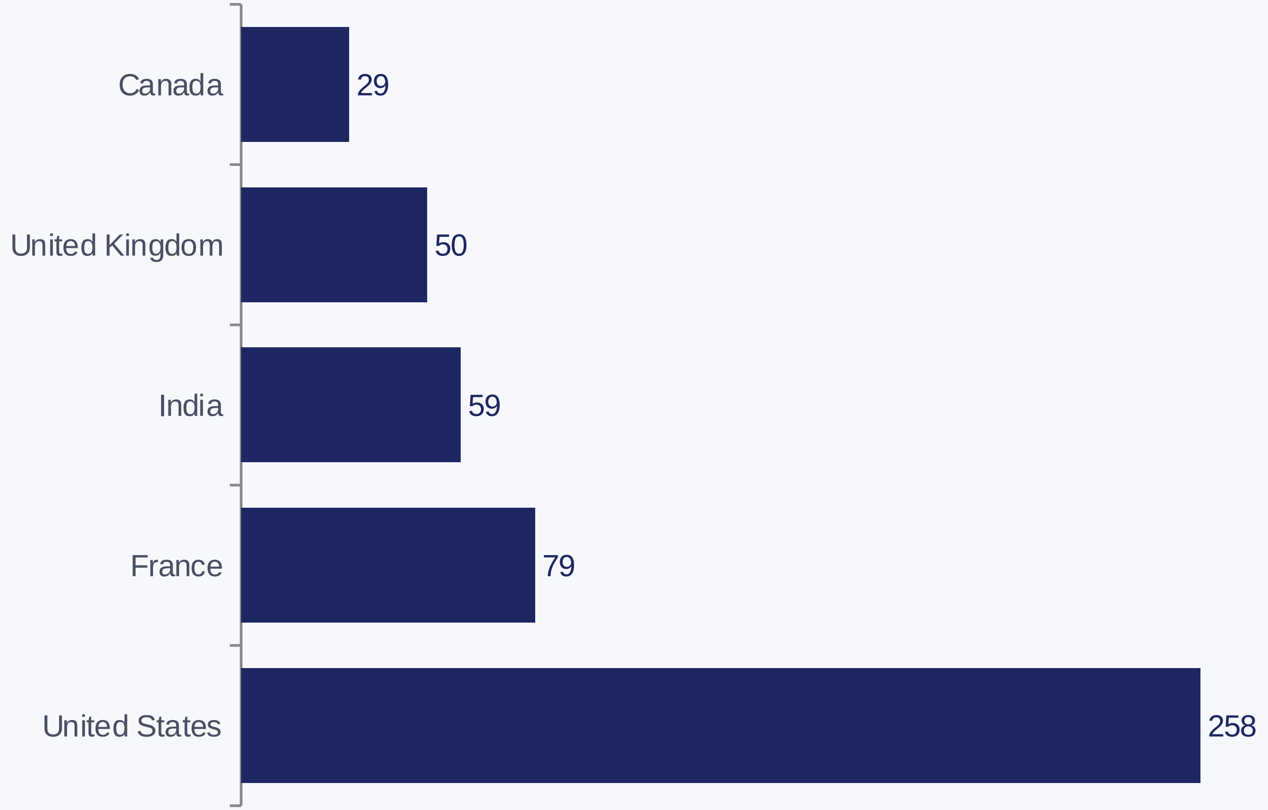
Risk	Evidence	Action
Revenue contraction	33.7% report negative growth	Investigate root causes
Growth concentration	Only 1/3 of startups expanding	Fund repeatable growth
Early-stage volatility	19.7% have $0 MRR	Segment by maturity
Limited financial visibility	No churn / CAC / profitability data	Expand KPI reporting

Board-level conclusion

Scalable growth is concentrated among a limited set of businesses. Executive attention should shift from maximizing portfolio-wide growth to identifying what consistently distinguishes high-growth startups.

The U.S. anchors a concentrated geography

Top 5 Markets by Startup Count



Portfolio Share

United States	25.8%
France	7.9%
India	5.9%
United Kingdom	5.0%
Canada	2.9%

Top 5 countries account for ~47.5% of all 1,000 startups — a concentration that increases exposure to region-specific risk while highlighting expansion potential in underrepresented markets such as India.

Conversion matters more than traffic volume

Website Traffic
Awareness — potential customer reach

Revenue per Visitor
Conversion — visitor-to-payer efficiency

Active Subscriptions
Adoption — recurring customer base

Monthly Recurring Revenue
Monetization — durable recurring value

Why this matters

High traffic ≠ revenue
Traffic and MRR are captured independently in the dataset.

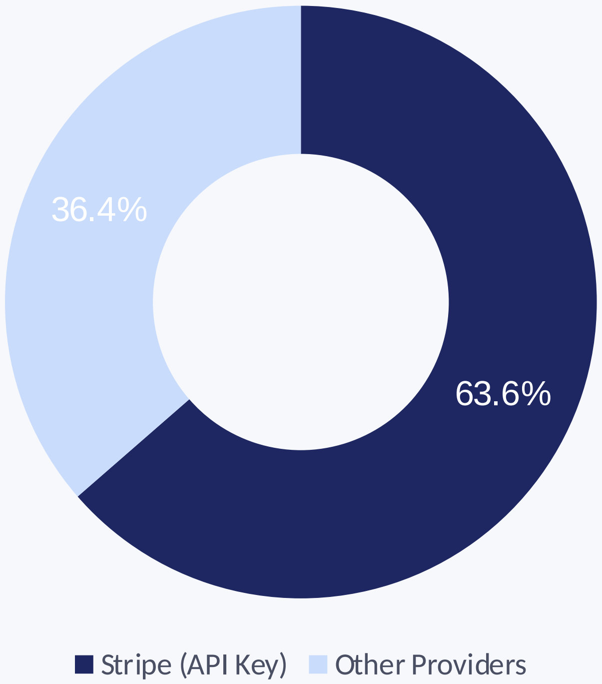
RPV is the efficiency signal
Combines acquisition and monetization into one KPI.

Missing: CAC, LTV, churn
Customer profitability can't be fully assessed without them.

Executive recommendation: track Revenue per Visitor alongside traffic, and benchmark the highest-RPV startups to identify pricing, packaging, and conversion best practices worth replicating.

Subscription billing dominates the portfolio

Payment Infrastructure



636 of 1,000 startups run on Stripe-enabled billing — strong structural adoption of recurring, subscription-based monetization.

Strategic Pricing Archetypes

High MRR, High RPV

Strong pricing power & efficient monetization

High Traffic, Low RPV

Strong acquisition, weak monetization

Low Traffic, High RPV

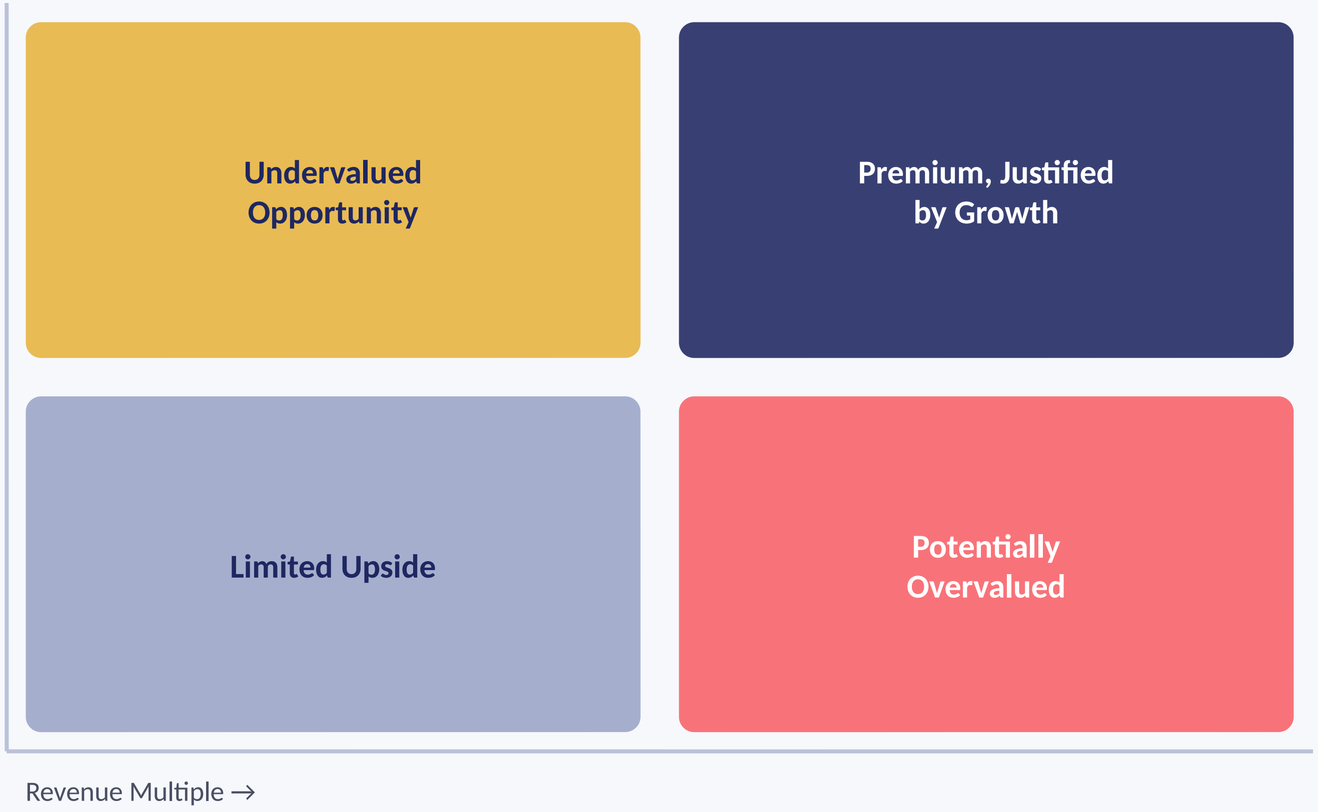
Efficient monetization, limited reach

Low Traffic, Low RPV

Weak acquisition & pricing performance

Value startups on multiples, not headline price

Valuation Risk Matrix — Revenue Multiple vs. Growth



Valuation KPIs to Track

Revenue Multiple

Standardized valuation benchmark across startups

Asking Price vs. MRR

Flags valuations unsupported by recurring revenue

Revenue Growth

Justifies premium multiples when genuinely durable

Missing for full diligence: EBITDA, gross margin, burn rate, funding stage, capital raised.

EXECUTIVE RECOMMENDATIONS

Fix execution before chasing new deals

1 Scale high-performing startups

● High priority

2 Improve monetization efficiency

● High priority

3 Segment portfolio by maturity

● High priority

4 Strengthen KPI monitoring

● High priority

5 Reduce concentration risk

● Medium priority

6 Build a repeatable growth playbook

● Medium priority

12-Month Implementation Roadmap

0–3 Months

Scale winners, segment portfolio, launch KPI dashboard

3–6 Months

Optimize pricing, conversion, and subscription adoption

6–12 Months

Diversify markets, standardize the growth playbook

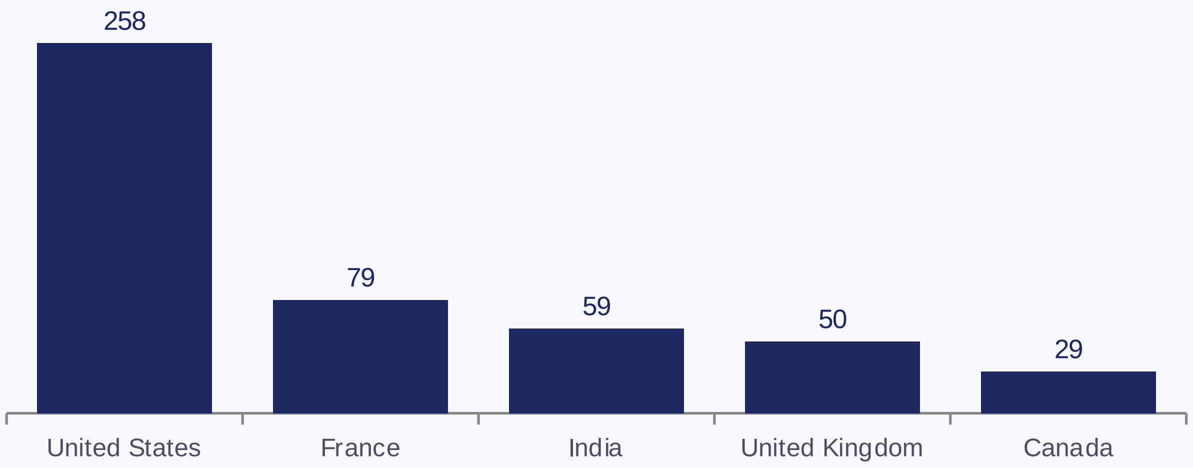
APPENDIX

Supporting tables & charts

A. Portfolio Overview

Metric	Value
Total Startups	1,000
Variables Analyzed	29
Countries Represented	50+
Largest Category	AI (197)
Total Portfolio MRR	~$13.47M
Median MRR	$282

D. Geographic Distribution



I. Risk Summary

Risk	Impact	Likelihood
Revenue Concentration	High	High
Growth Volatility	High	High
Missing Financial Metrics	High	High
Geographic Concentration	Medium	Medium
AI Market Saturation	Medium	Medium

Key Data Limitations

- No CAC or LTV — acquisition efficiency can't be assessed
- No churn data — recurring revenue quality unvalidated
- No profitability metrics — revenue ≠ financial performance
- No funding stage or operating costs — unit economics incomplete
