VERIFIED-REVENUE MARKET INTELLIGENCE

A Systematic Way to Buy the Profitable Half of the Indie Software Economy

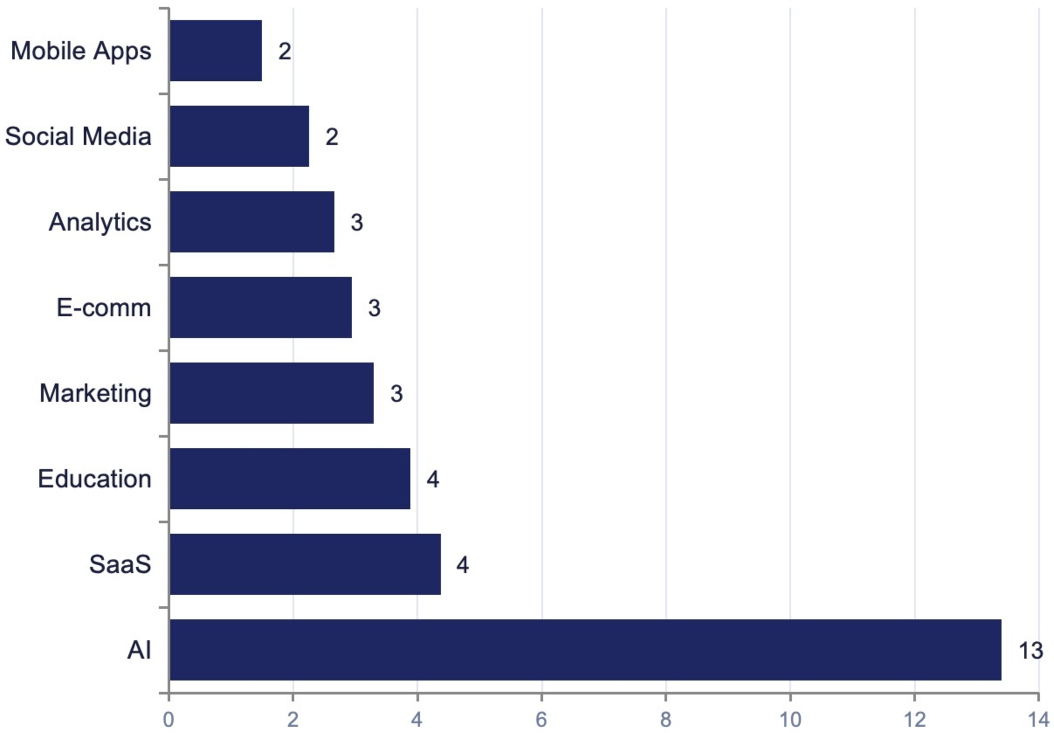
1,000 payment-verified digital businesses. A quarter of them already want to sell.

$161.7M	**1,000**	**26.2%**	**2.3x**
Annualized run-rate across the sample	Verified, revenue-generating businesses	Already flagged for sale	Median entry revenue multiple

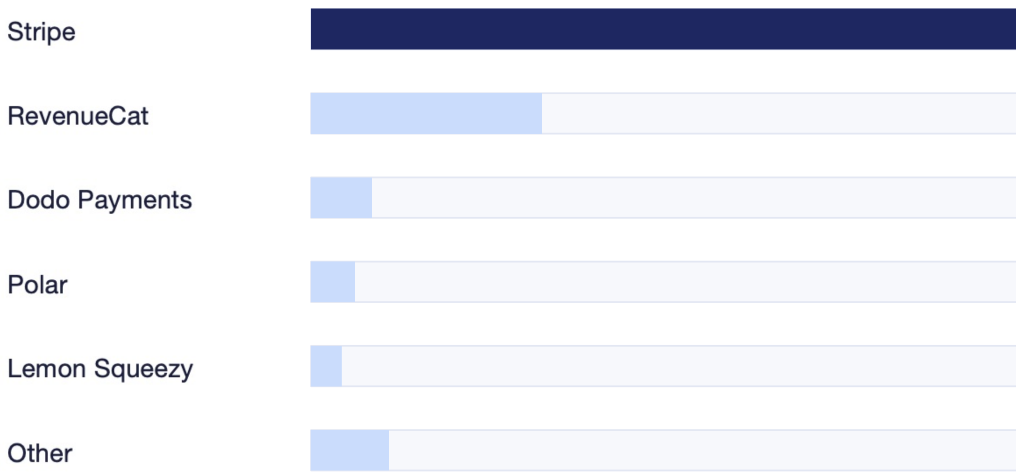
A $161.7M Market Hiding in Plain Sight

1,000 businesses, 19+ categories, 60+ countries — every dollar independently verified through payment infrastructure, not self-reported.

Share of Total MRR by Category (Top 8)



Verified via Payment Infrastructure

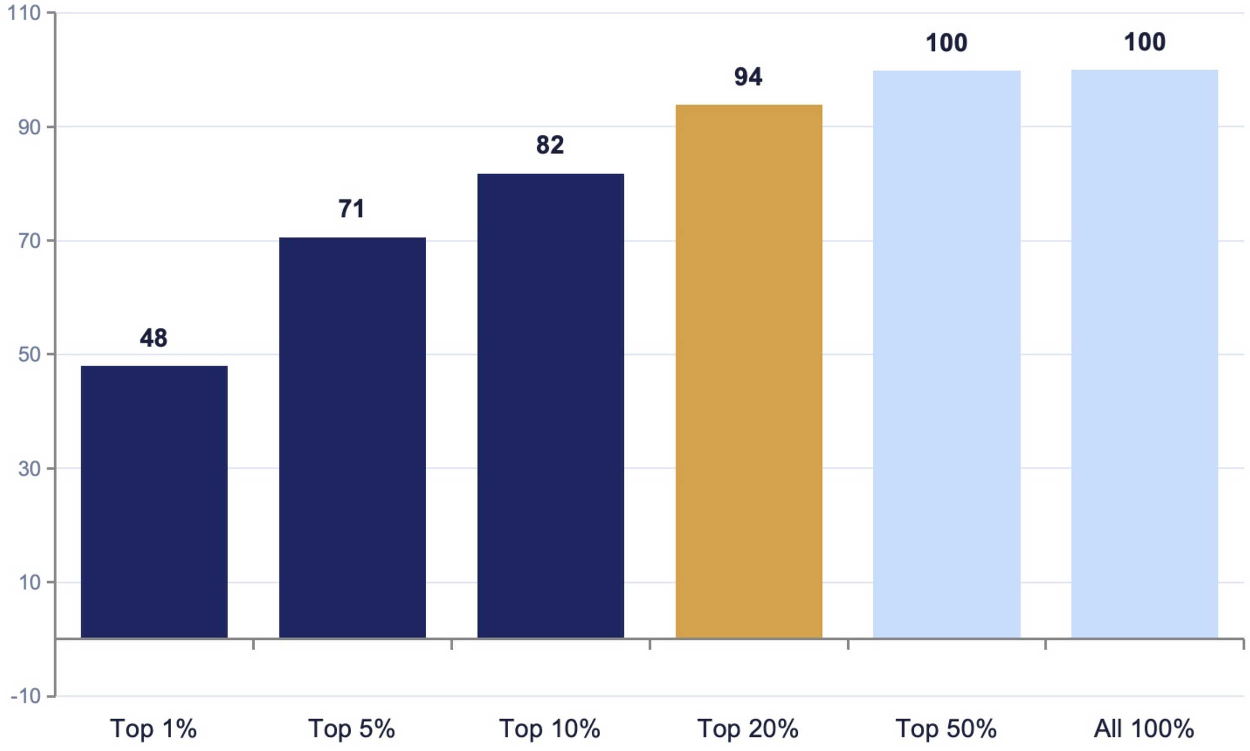


Every figure in this deck is pulled directly from a connected payment API — not a self-reported founder claim.

MARKET STRUCTURE

Revenue Follows a Power Law, Not a Bell Curve

A tiny fraction of businesses hold almost all the economic value — exactly where sourcing discipline pays off.



Cumulative share of total tracked MRR, businesses ranked by size

47.8x

Mean MRR ($13,472) is 47.8x the median ($282)

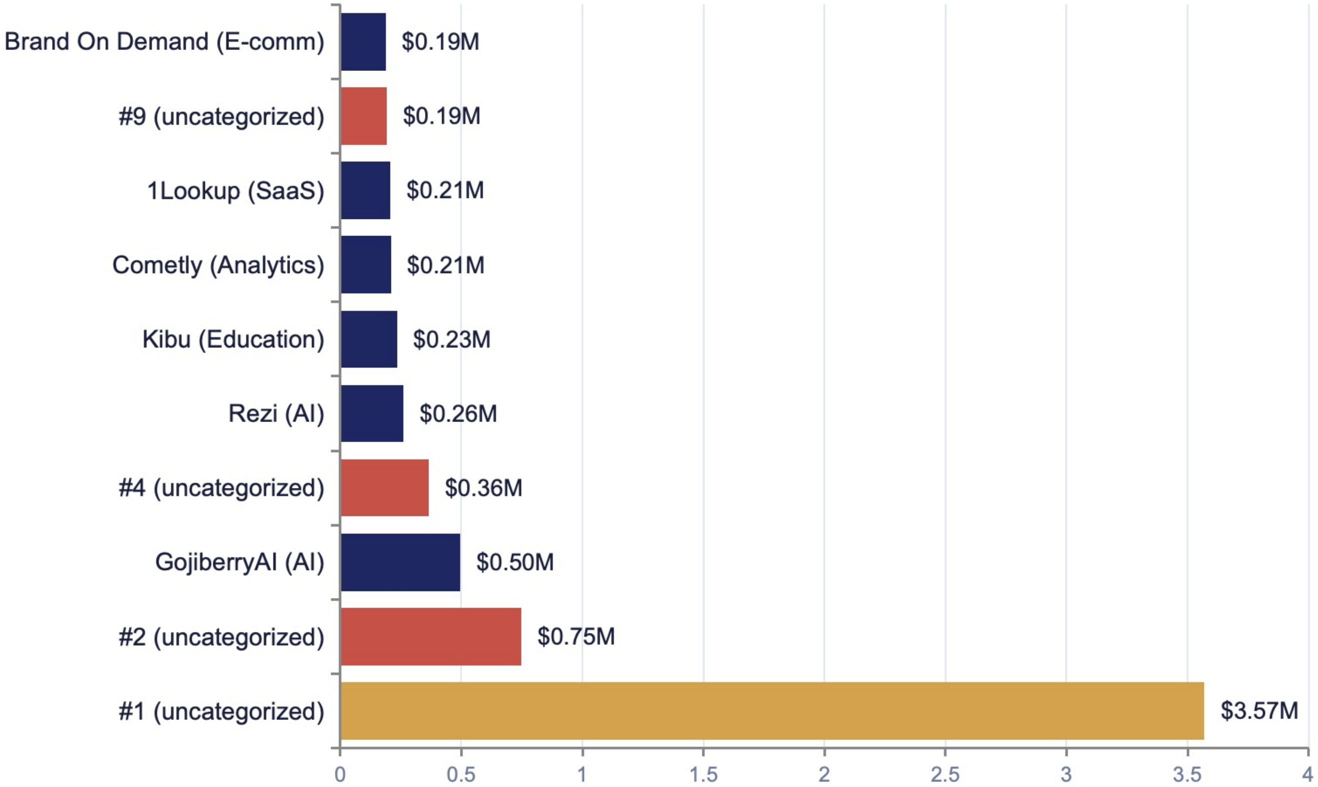
0.2%

Share of total MRR held by the bottom 50% of businesses

DATA INTEGRITY

The Biggest Winner in This Market Doesn't Fit a Category

Category-based analysis alone would miss the single largest value pool in the entire dataset.



26.5%

of ALL tracked MRR comes from a single business with no category, audience, or business-model tag.

35.7%

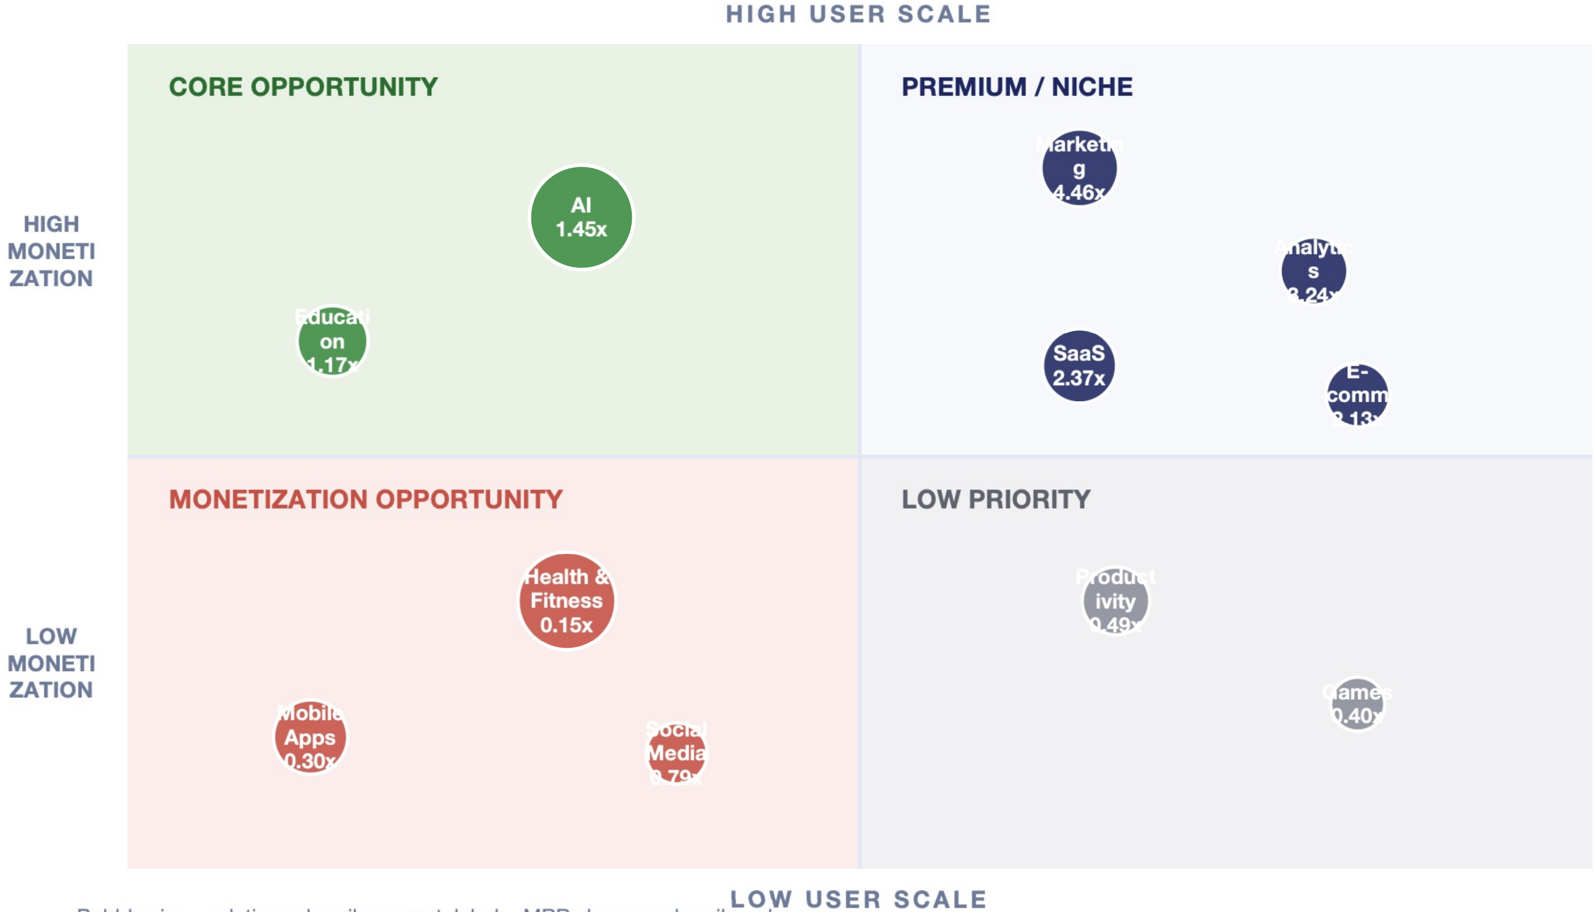
of total MRR sits in just the top 3 businesses (gold + coral bars)

Top 10 businesses by monthly MRR

CATEGORY STRATEGY

User Scale and Monetization Are Not the Same Thing

The categories with the most users are frequently not the categories with the most money.



Bubble size = relative subscriber count; label = MRR share ÷ subscriber share

8.2%

of all subscriptions sit in Health & Fitness, which drives just 1.3% of MRR

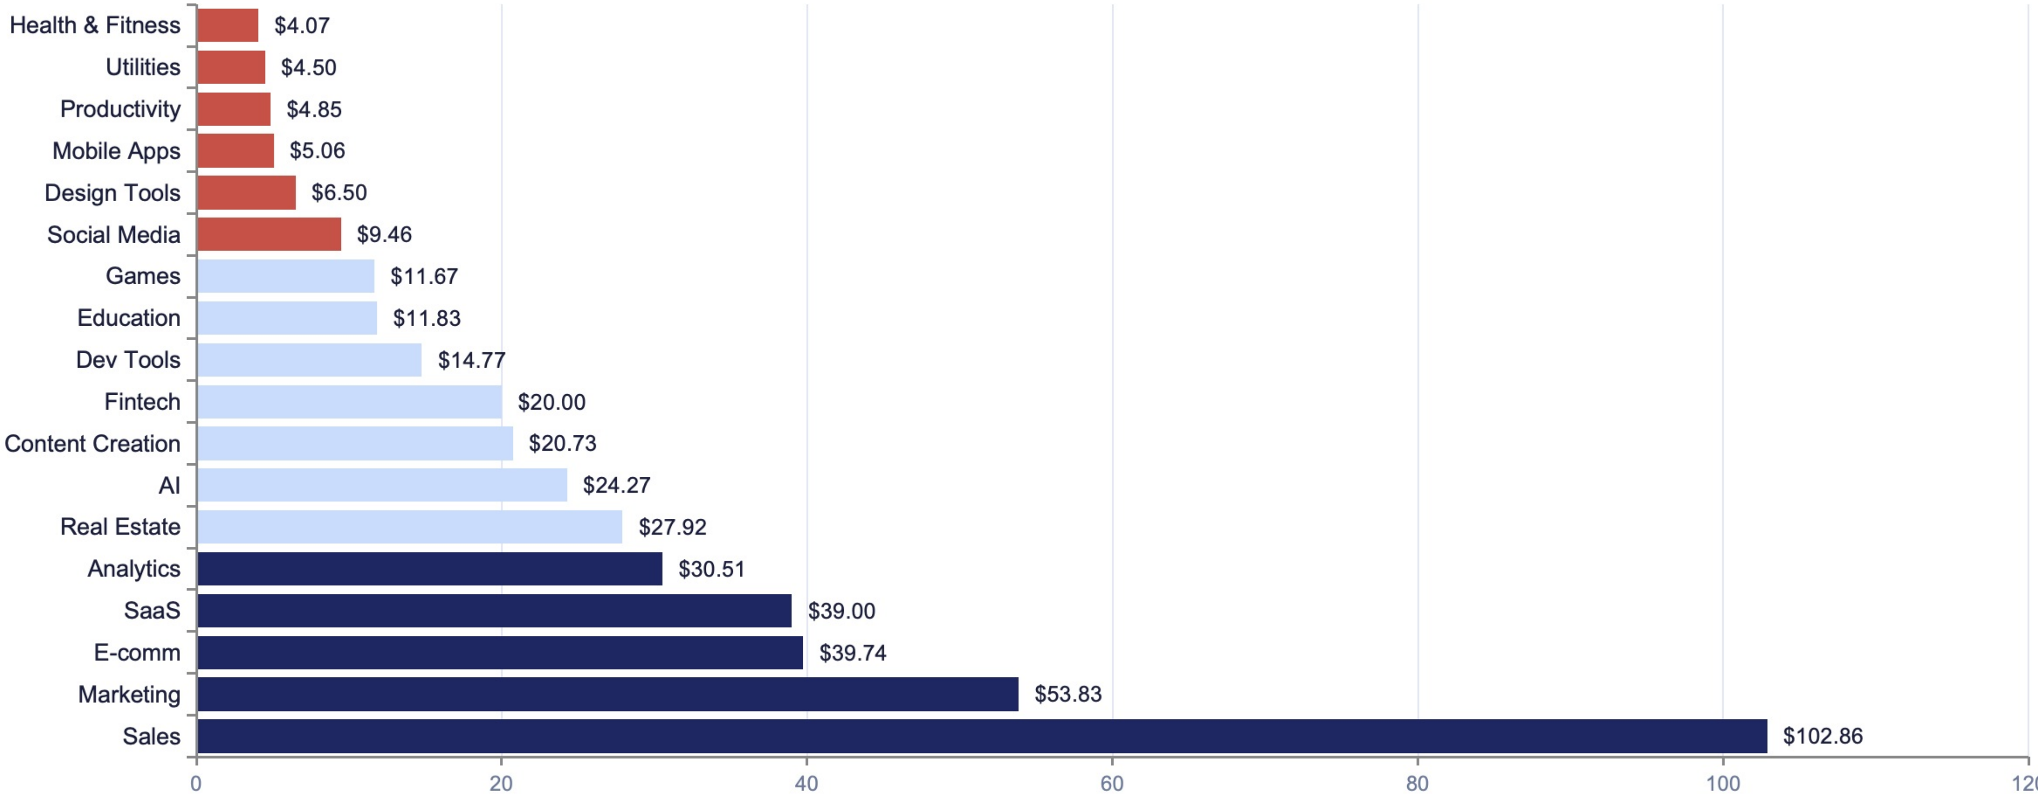
4.46x

Marketing's monetization over-index — the strongest of any category

MONETIZATION EFFICIENCY

A 13x Monetization Gap Sits Between Categories

Category choice alone can mean a 13x difference in revenue captured per user.

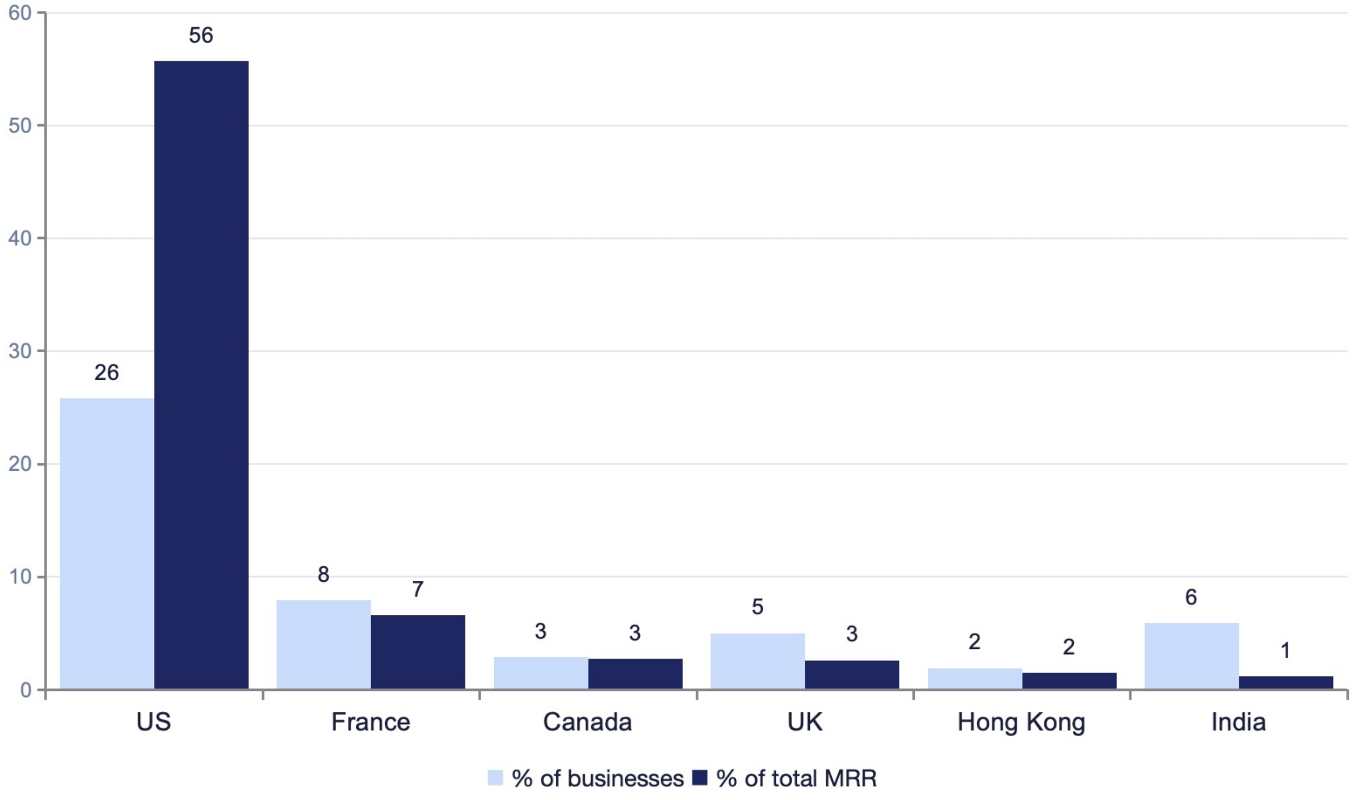


Median monthly revenue per active subscriber, categories with n ≥ 10

GEOGRAPHIC CONCENTRATION

The US Captures 2.16x Its Share of Global Revenue

Revenue is even more concentrated geographically than business count alone would suggest.



2.16x

US monetization over-index: 25.8% of businesses generate 55.7% of total MRR ($7.5M of $13.47M).

0.94x – 0.84x

Canada and France sit near parity — credible, proven secondary markets for near-term expansion.

Share of business count vs. share of total MRR by country

EXPANSION OPPORTUNITY

The World's Builders Aren't Where the Revenue Is

Some of the largest founder populations are also the most under-monetized — a structural gap, not a demand problem.

Market	% of businesses	% of total MRR	Monetization ratio
US (benchmark)	25.8%	55.7%	**2.16x**
India	5.9%	1.16%	**0.20x**
UK	5.0%	2.60%	**0.52x**
Germany	2.4%	0.56%	**0.23x**

0.20x

India's monetization ratio — roughly 1/10th the US's (2.16x), despite being the 3rd-largest market by business count.

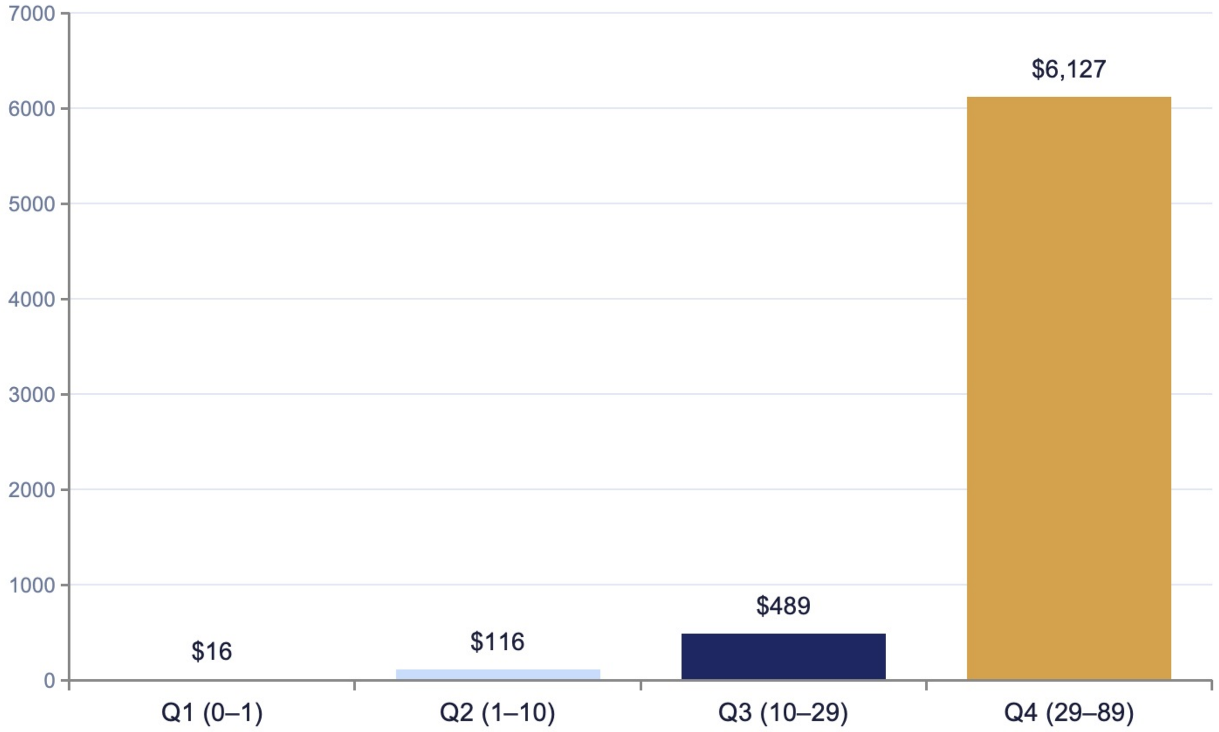
These aren't weak markets — they're mispriced markets. And mispricing is where returns live.

Monetization ratio = share of total MRR ÷ share of business count

Search Authority Predicts Revenue; Social Followers Don't

We know which signals actually predict revenue — and which are noise.

Median MRR by Domain Authority Quartile



~400x

gap in median MRR between the top and bottom domain-authority quartiles ($6,127 vs. $15.50).

0.02

correlation between X/Twitter follower count and revenue — essentially none.

A Quarter of This Market Is Already for Sale — At a Median 2.3x Revenue

This market isn't just observable, it's actionable: hundreds of proven, profitable businesses are already signaling they want to sell.

1,000 Total verified businesses

262 Explicitly flagged for sale (26.2%)

224 For-sale, with disclosed price + active revenue

$35K
Median asking price

2.3x
Median revenue multiple

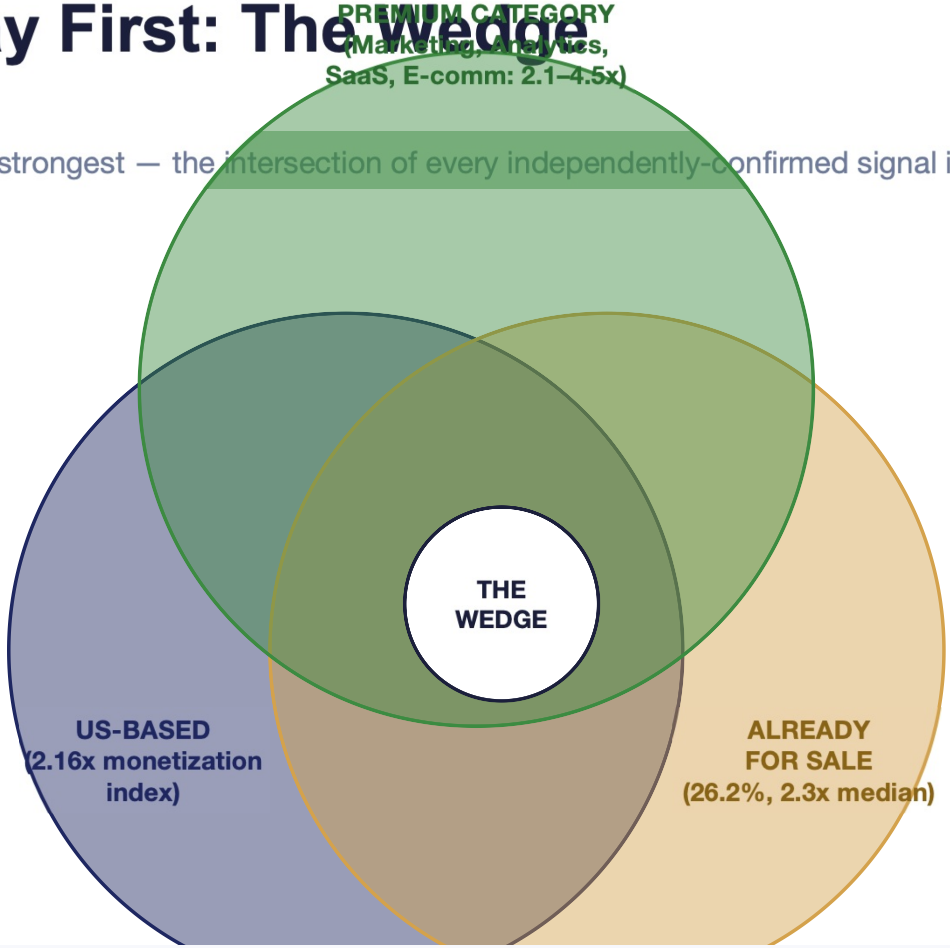
$24.6M
Annualized MRR of the for-sale cohort

For-sale segment; asking price and multiple disclosed for the majority of listings

STRATEGIC SYNTHESIS

Where We Play First: The Wedge

We start where the evidence is strongest — the intersection of every independently-confirmed signal in the data.



The wedge isn't a guess — it's the intersection of every strong signal already present in the data.

GROWTH PATH

From Wedge to Platform: The Expansion Roadmap

Every adjacent move is already visible as a gap in the data — we're not guessing where to go next.

HORIZON 1

The Wedge

US-based, premium-category, for-sale, verified-revenue businesses.

Now

HORIZON 2

Category Expansion

Move into AI & Education — the largest “Core Opportunity” segment. AI alone: $1.8M MRR (13.4% of total), 197 businesses to source from.

Next 12–18 mo

HORIZON 3

Geographic Expansion

Localized pricing & underwriting for high-volume, under-monetized markets: India (0.20x), UK (0.52x).

18–36 mo

EXECUTION

How We Source, Underwrite, and Operate

Our edge is a repeatable, data-driven process — not one-off deal picking.

1	2	3	4	5	6
SOURCE	**VERIFY**	**SCORE**	**UNDERWRITE**	**ACQUIRE**	**OPERATE**
Pull for-sale, verified-revenue listings	Confirm payment-API verified revenue	Rank by category & geo monetization efficiency	Price against 2.3x median multiple benchmark	Close at a discount to fair value	Scale using proven monetization playbooks

Underwriting foundation: independently verified revenue data, the domain-authority diligence signal, and monetization-ratio scoring — all quantified earlier in this deck.

Process not measurable from the market intelligence data alone — operating plan detail to follow

THE ASK

The Investment Thesis

A large, fragmented, verifiably profitable market is already signaling willingness to sell at a discount to typical software multiples.

$161.7M

Sample-wide annualized run-rate — a large, real, verifiable market

48%

Of total MRR held by just the top 1% of businesses — sourcing precision wins

2.3x

Median entry revenue multiple, well below larger-scale SaaS benchmarks

262

Immediately actionable, verified-revenue businesses already for sale

This is a sourcing and pricing advantage, grounded in verified data, in a market that already wants to transact.

What We Know, What We're Still Testing

The market signal is strong; the next step is validating causality and transaction mechanics — not market existence.

VALIDATED

- Revenue independently verified via payment-API integration, not self-reported
- Concentration structure: top 1% of businesses = 48% of MRR
- Category & geography monetization gaps, confirmed across MRR, subscribers, and ARPU together
- For-sale rate (26.2%) and pricing (median 2.3x revenue multiple)

TO VALIDATE

- Root causes of monetization gaps (pricing, currency, product) — requires primary diligence
- Single point-in-time snapshot; growth figures are 30-day deltas, not a validated trend
- Current liveness and true close rates of “for sale” listings
- Actual negotiated price vs. asking price on completed transactions

We know exactly what this data proves, implies, and still needs diligence — as any disciplined underwriting should
