From Dataset to Deal Flow: The US Generative AI Strategy

A Data-Driven Build & Buy Roll-Up Strategy for 2024–2025

The Market

US Gen AI is growing at a 41% CAGR toward a

$148B valuation.

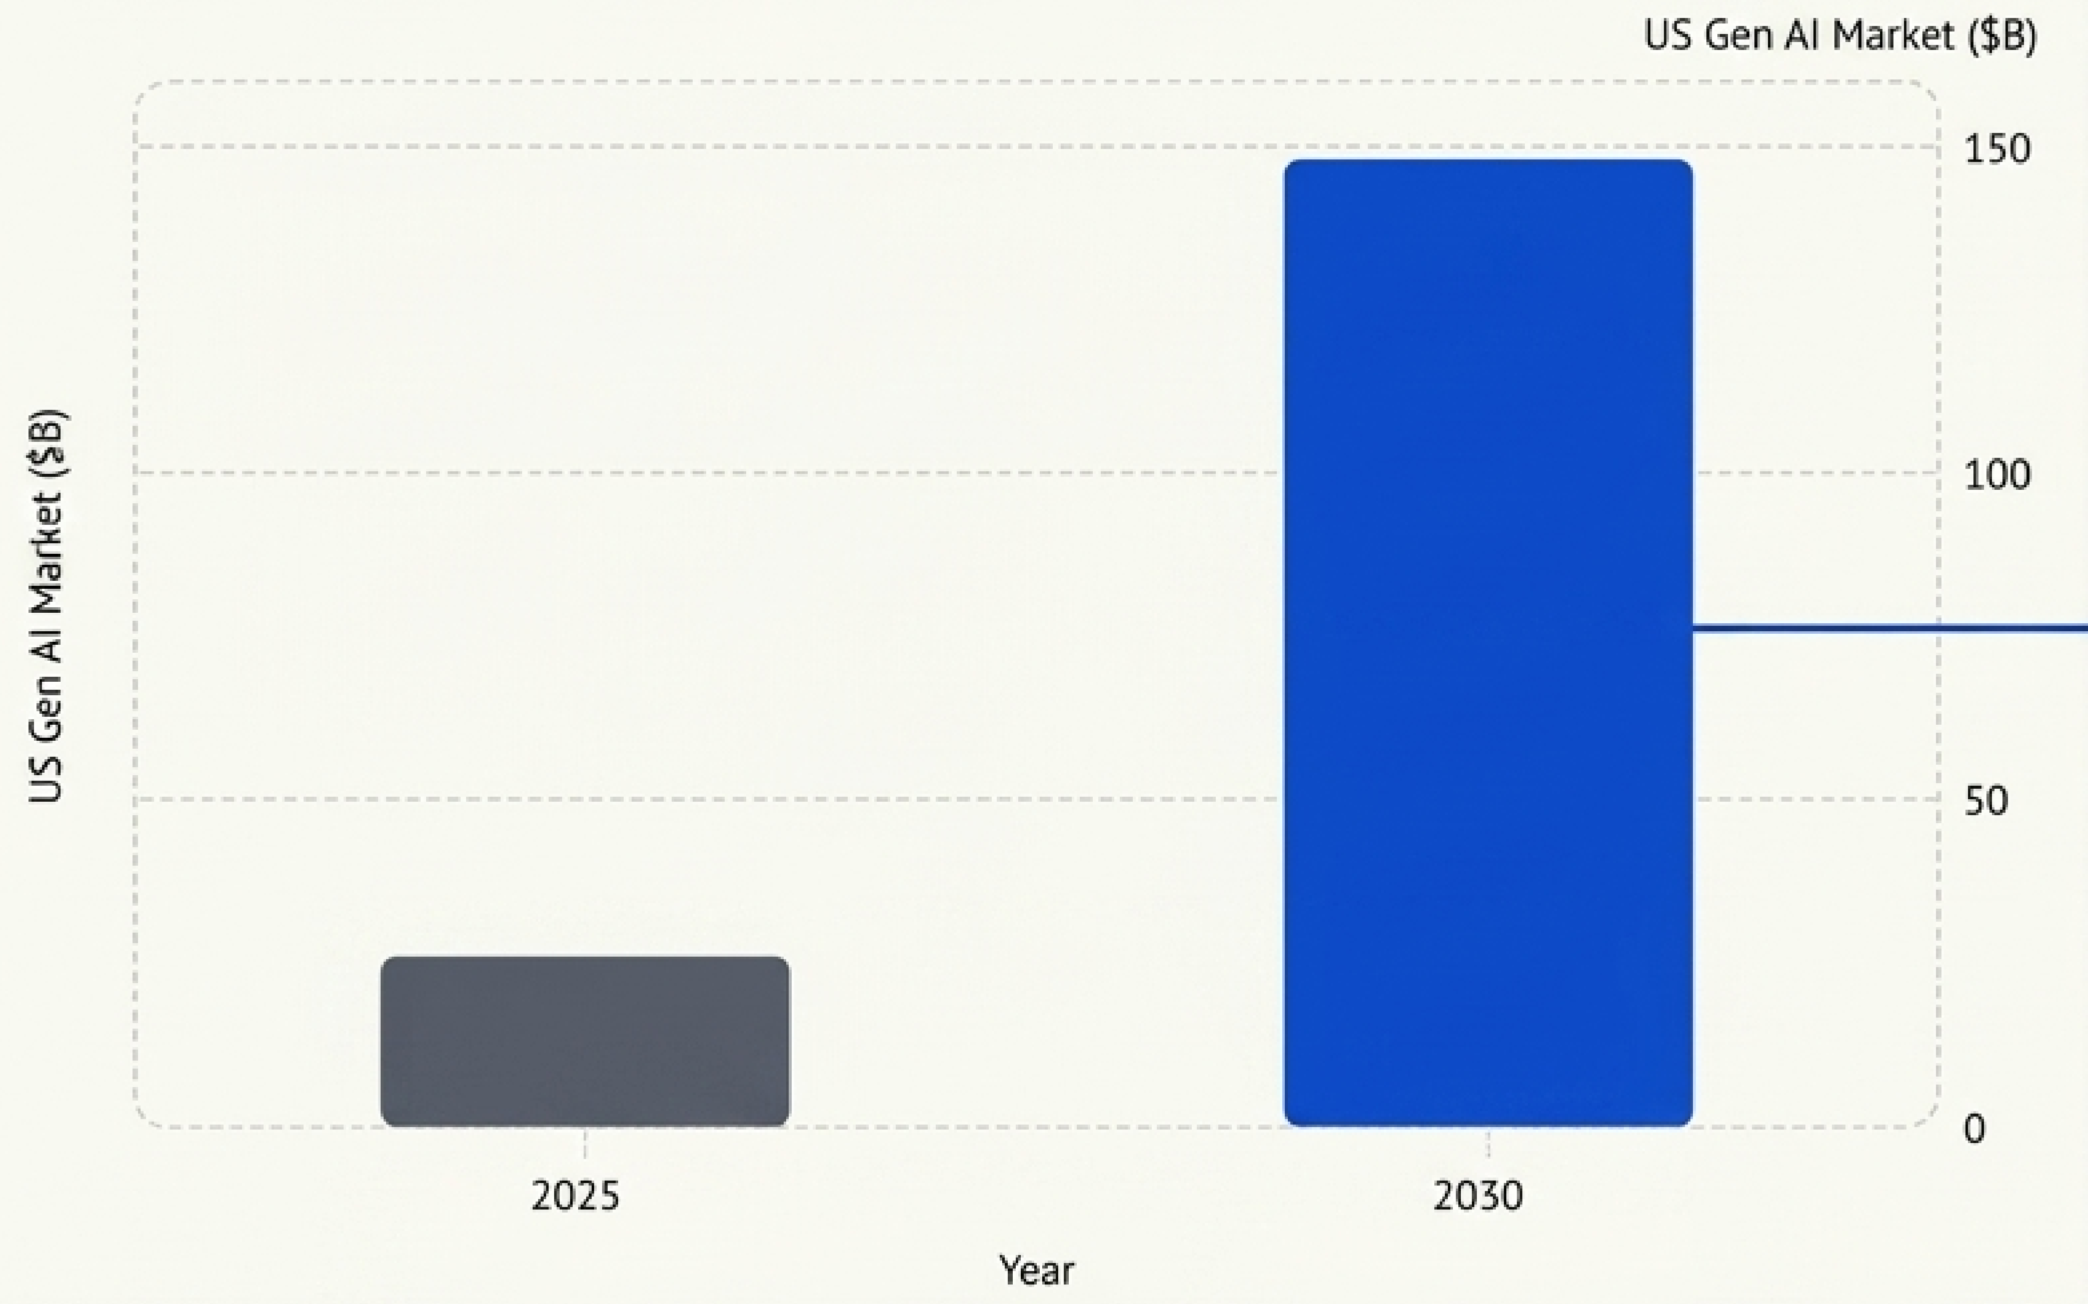
The Advantage

Powered by the proprietary TrustMRR dataset mapping **1,000** revenue-verified verified global startups.

The Ask

A low-to-mid single-digit million commitment to fund a precise **12-month** Build + Buy execution plan.

US Generative AI is a 10× Decade



41%

Projected CAGR

$109B

2024 US Private AI Investment

This capital is **12× China's** and **24× the UK's** total investment.

Capital, customers, and infrastructure are heavily concentrated in US AI. Our mandate is to capture this exponential growth with a focused product—not watch from the sidelines.

Our Unfair Advantage: The TrustMRR Dataset

1,000

Revenue-Verified Startups tracked globally.

$134M

Verified 12-month operating revenue across the dataset.

29

Strict data fields tracking health and metrics per startup.

262

Startups actively listed for sale with disclosed multiples.

This is a **functioning, real-world operating market**—not a hypothetical TAM calculation.

Strategic Targeting: Where We Play

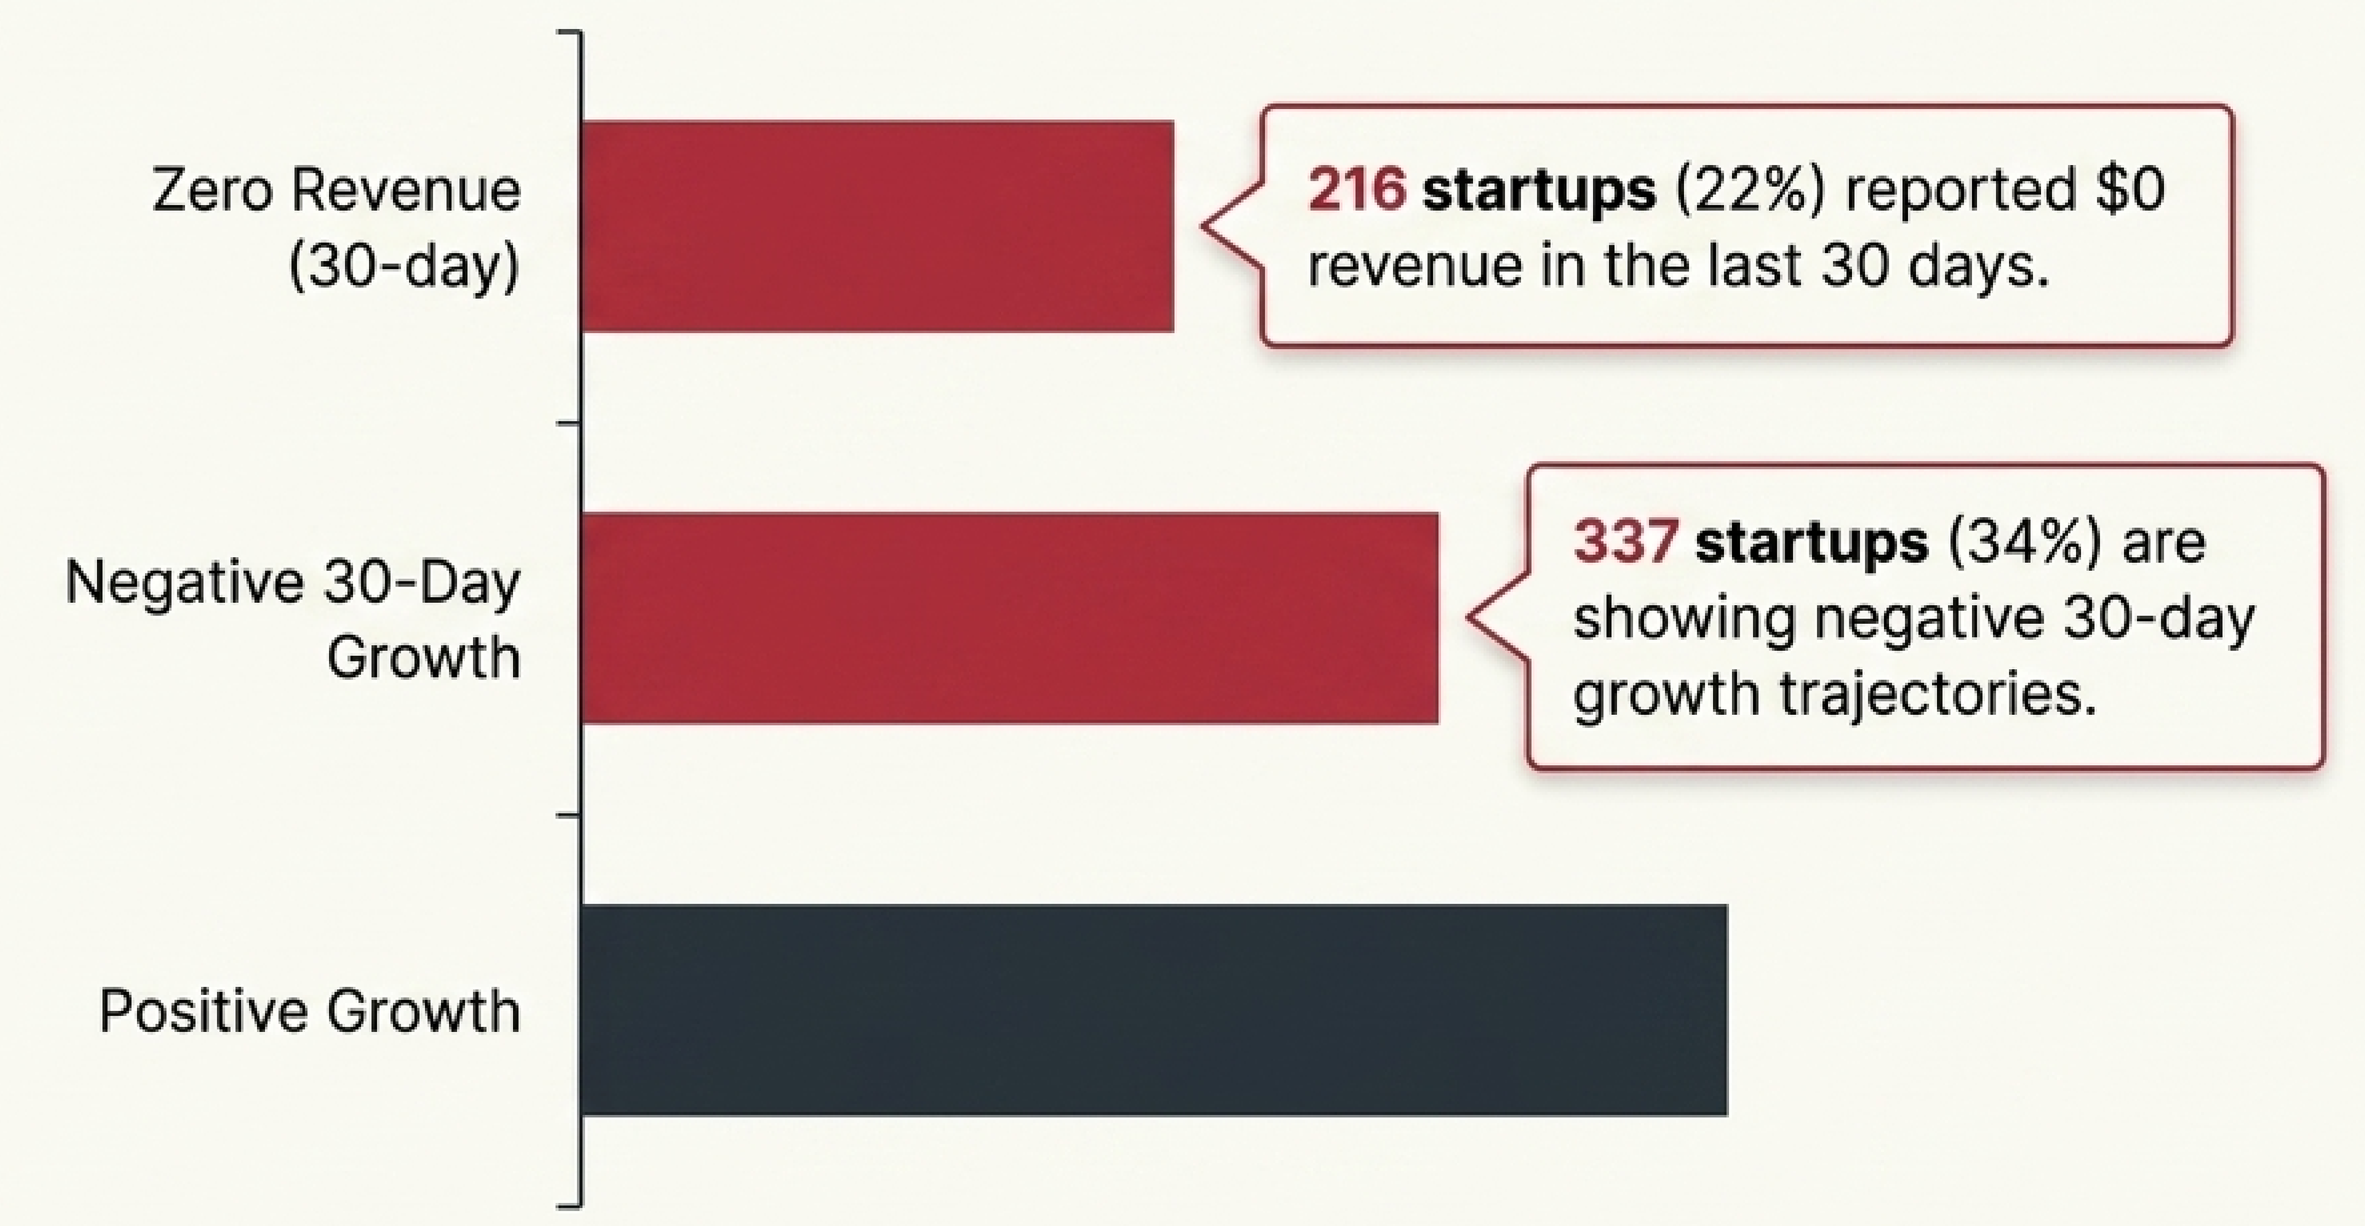
Category	Geography: US	Geography: Non-US
AI	**US AI** Focus: High Growth & Liquidity	**US Non-AI** Secondary: Mature, Less Growth
Non-AI	**Non-US AI** Secondary: Fragmented, Emerging	**Non-US Non-AI** Deactivated: Lower Priority

Strategic Thesis

- We are not inventing a category.
- AI is the largest category in TrustMRR; the US is the largest geography.
- By targeting US-based AI digital products, we enter the intersection of peak buyer activity, verified monetized SaaS, and maximum ecosystem maturity.

The Reality Check: Volume ≠ Revenue Quality

Diagnostic Alert



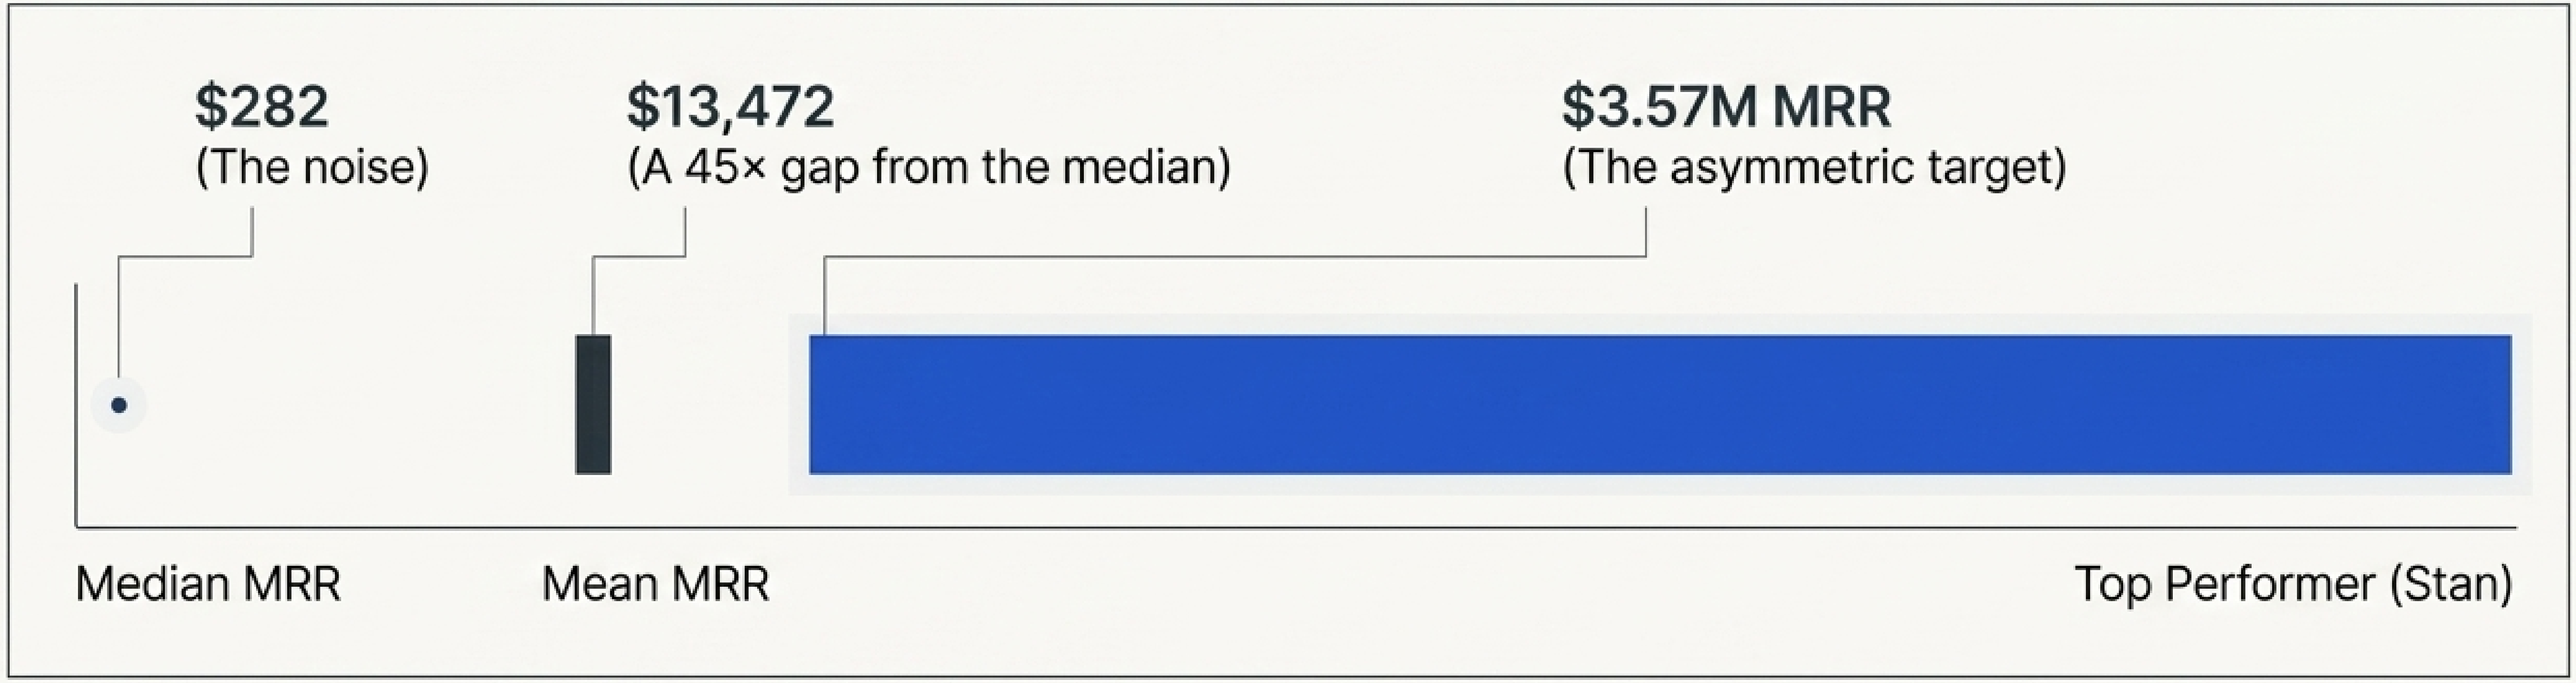
The Market Noise

While AI and mobile apps dominate volume, they are flooded with early-stage, zero-revenue experiments.

Our Mandate

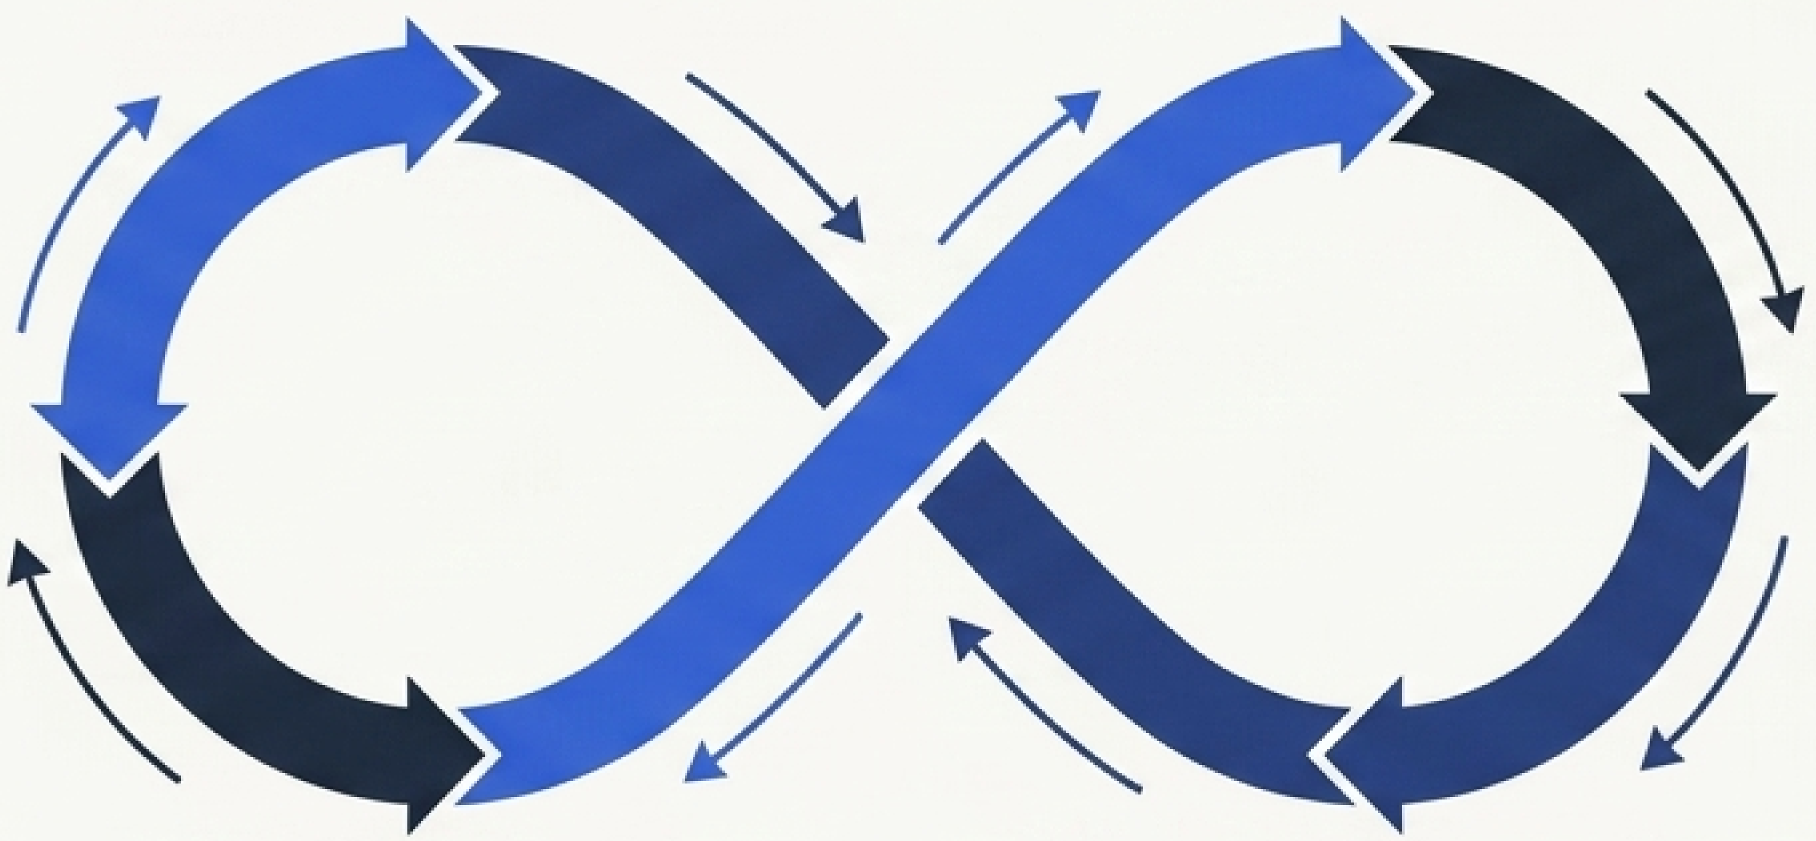
Target mature-category SaaS economics. Filter out median AI experiment dynamics entirely.

Asymmetric Upside: The Power Law



The math is unambiguous. Aiming for the average AI startup is a trap. The distribution spans two orders of magnitude from rank 1 to rank 15. The data demands that we target the top decile to capture extreme right-skewed upside.

Product Thesis: The Subscription Flywheel



Correlation Readout

The Signal

Active Subscriptions (**r ≈ 0.91**) and 30-Day Revenue (**r ≈ 0.87**) perfectly correlate to MRR.

The Noise

Vanity metrics (social followers, domain rating, growth %) show negligible correlation (r ≈ 0.02 – 0.3).

Core Principle: Build the AI around subscriptions, not hype.

Synthesis: The Target AI Asset Profile

Typical AI Experiment	Our Target AI Asset
One-off Tokens/Credits	**Recurring MRR Subscriptions**
Traffic & Social (r ≈ 0.02)	**Active Subscriptions (r ≈ 0.91)**
Novelty "Toy" Tool	**Repeatable B2B Job-To-Be-Done**
Fragmented/Global	**Hyper-focused US-Centric**

This strict asset profile dictates both what we build and what we acquire.

The Dual-Engine Strategy: Build + Buy

BUILD

Develop the Flagship US AI Product centered on core B2B workflows.

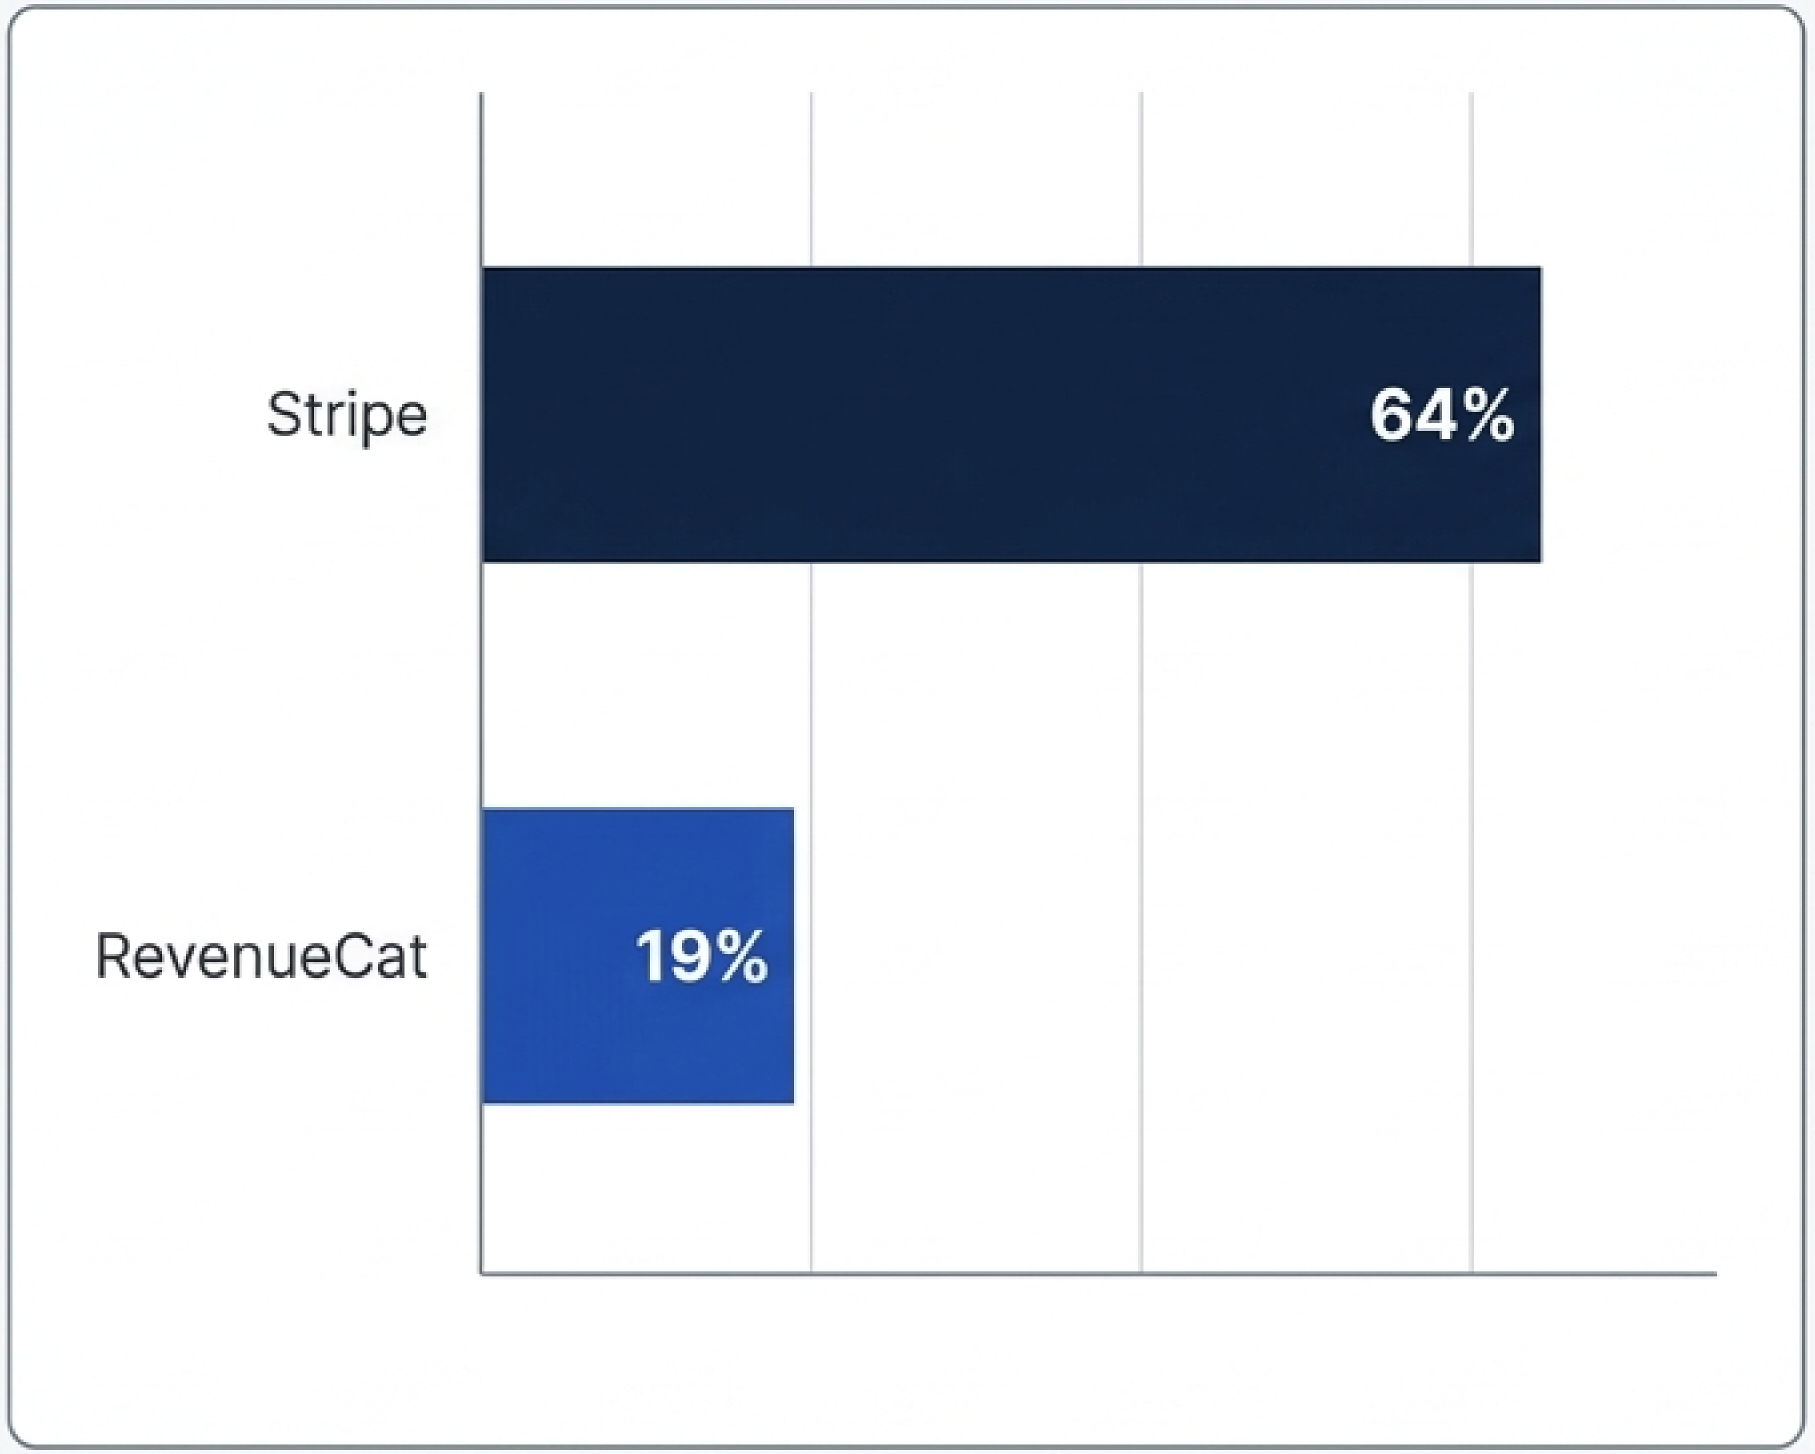
BUY

Selectively acquire from the 262 micro-SaaS assets currently listed for sale (Median Ask: $35K)

Integrated Enterprise Value

TrustMRR's marketplace economics eliminate the binary 'Build vs. Buy' dilemma. We will architect a flagship hub while aggressively rolling up complementary US AI micro-businesses, seamlessly integrating them into a singular SaaS ecosystem.

Go-To-Market Infrastructure



GTM Execution Plan

Zero Cold Starts: We leverage mature, standardized Stripe-native billing rails.

Instant Ecosystem: With 258 US startups utilizing these same rails, we possess a ready-made channel for ing, we possess a ready-made channel for API integrations, co-selling, and seamless software bundling.

Result: Accelerated customer acquisition from Day 1.

Investing with strict discipline, not blind optimism.

Risk 1: Growth Volatility (34% negative growth, 22% zero revenue).

Risk 2: Vanity Metric Bias ($r \approx 0.02$-0.3 with revenue).

Risk 3: Stealth Listings & Withheld Signals.

Mitigation: Subscription Subscription KPIs as the absolute primary filter.

Mitigation: Strict MRR and revenue multiple screening only.

Mitigation: TrustMRR financial data used as the sole decision basis.

The Investment Ask & 12-Month Roadmap

Investment Ask: Seeking a low-to-mid single-digit million-dollar commitment to fund the 12-month dual-track execution.

M0-3	M3-6	M6-9	M9-12
Architecture:	**Validation:**	**Targeting:**	**Roll-Up:**
Define subscription KPIs, target use case, and flagship architecture.	US beta launch. Hit initial subscriber/MRR milestones. Validate PMF.	Screen TrustMRR dataset. Identify 3–5 US AI acquisition targets with sane multiples.	Close first acquisitions. Integrate into flagship. Assess scale-up based on unified data.

A time-bounded, data-anchored deployment in a market where extreme upside and liquidity are already proven.
