TrustMRR Dataset: Strategic Financial Readout

Analysis of the 1,000-Row Dataset (Frozen 30 Jul 2026)

Dataset Foundation & Data Quality

A robust sample representing **$15.6M** in 30-day revenue across 1,000 global entities.

Core Dataset Metrics

1,000

Total Entities

(Complete Pairs for Revenue/Subs)

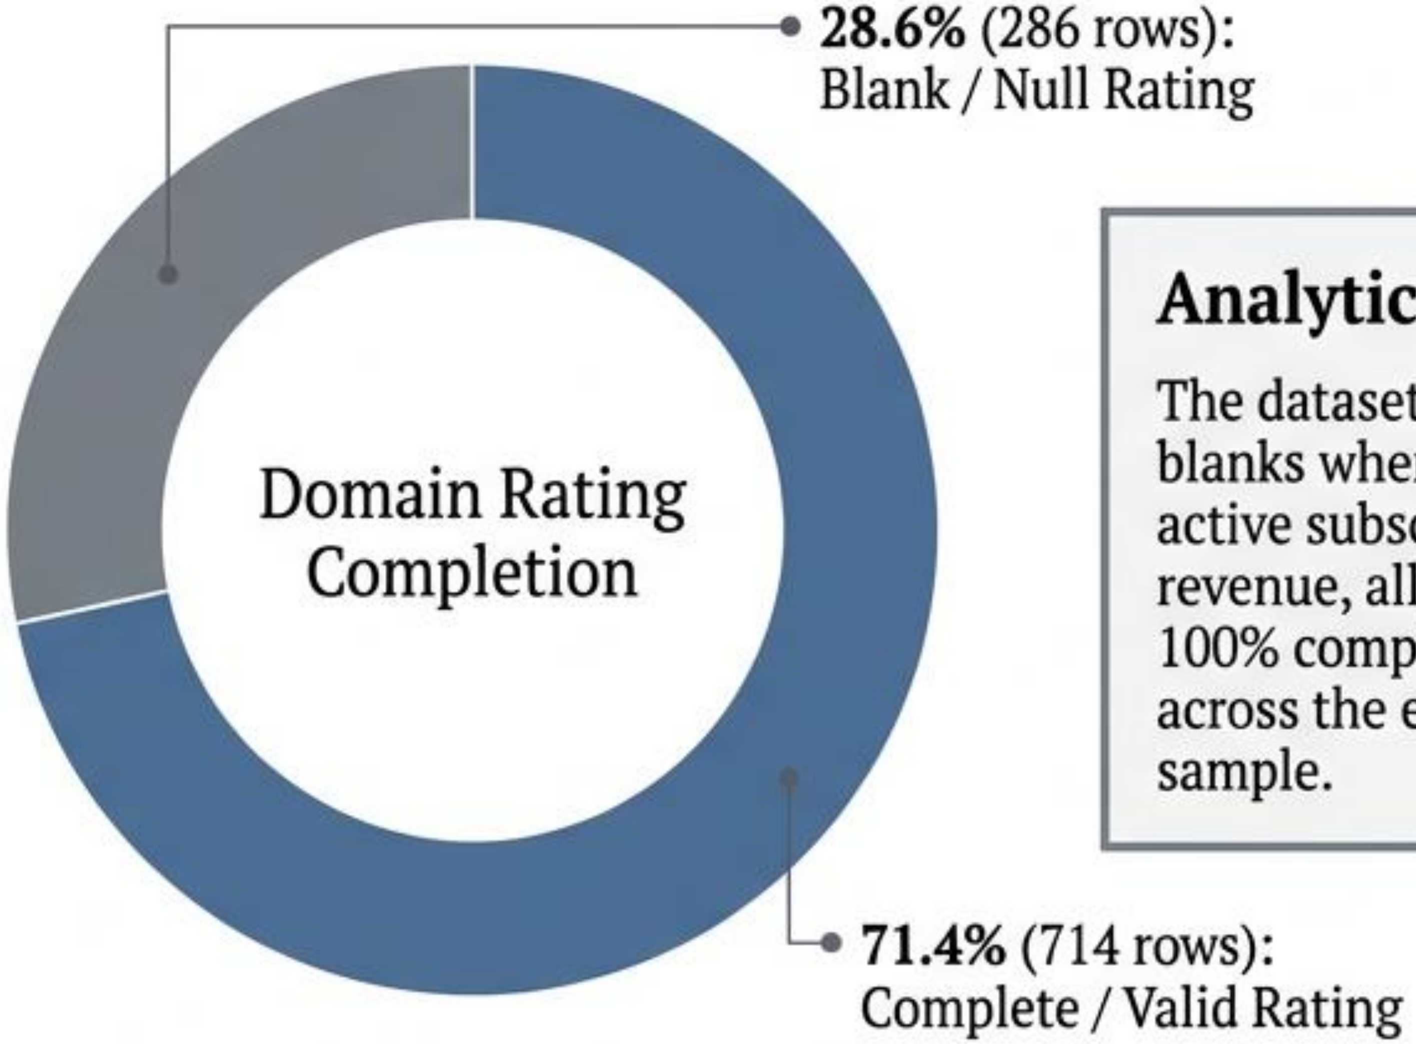
Core Dataset Metrics

$15,596,345

Total 30-Day Revenue

(Combined Named & Anonymous)

Data Quality & Integrity Checks



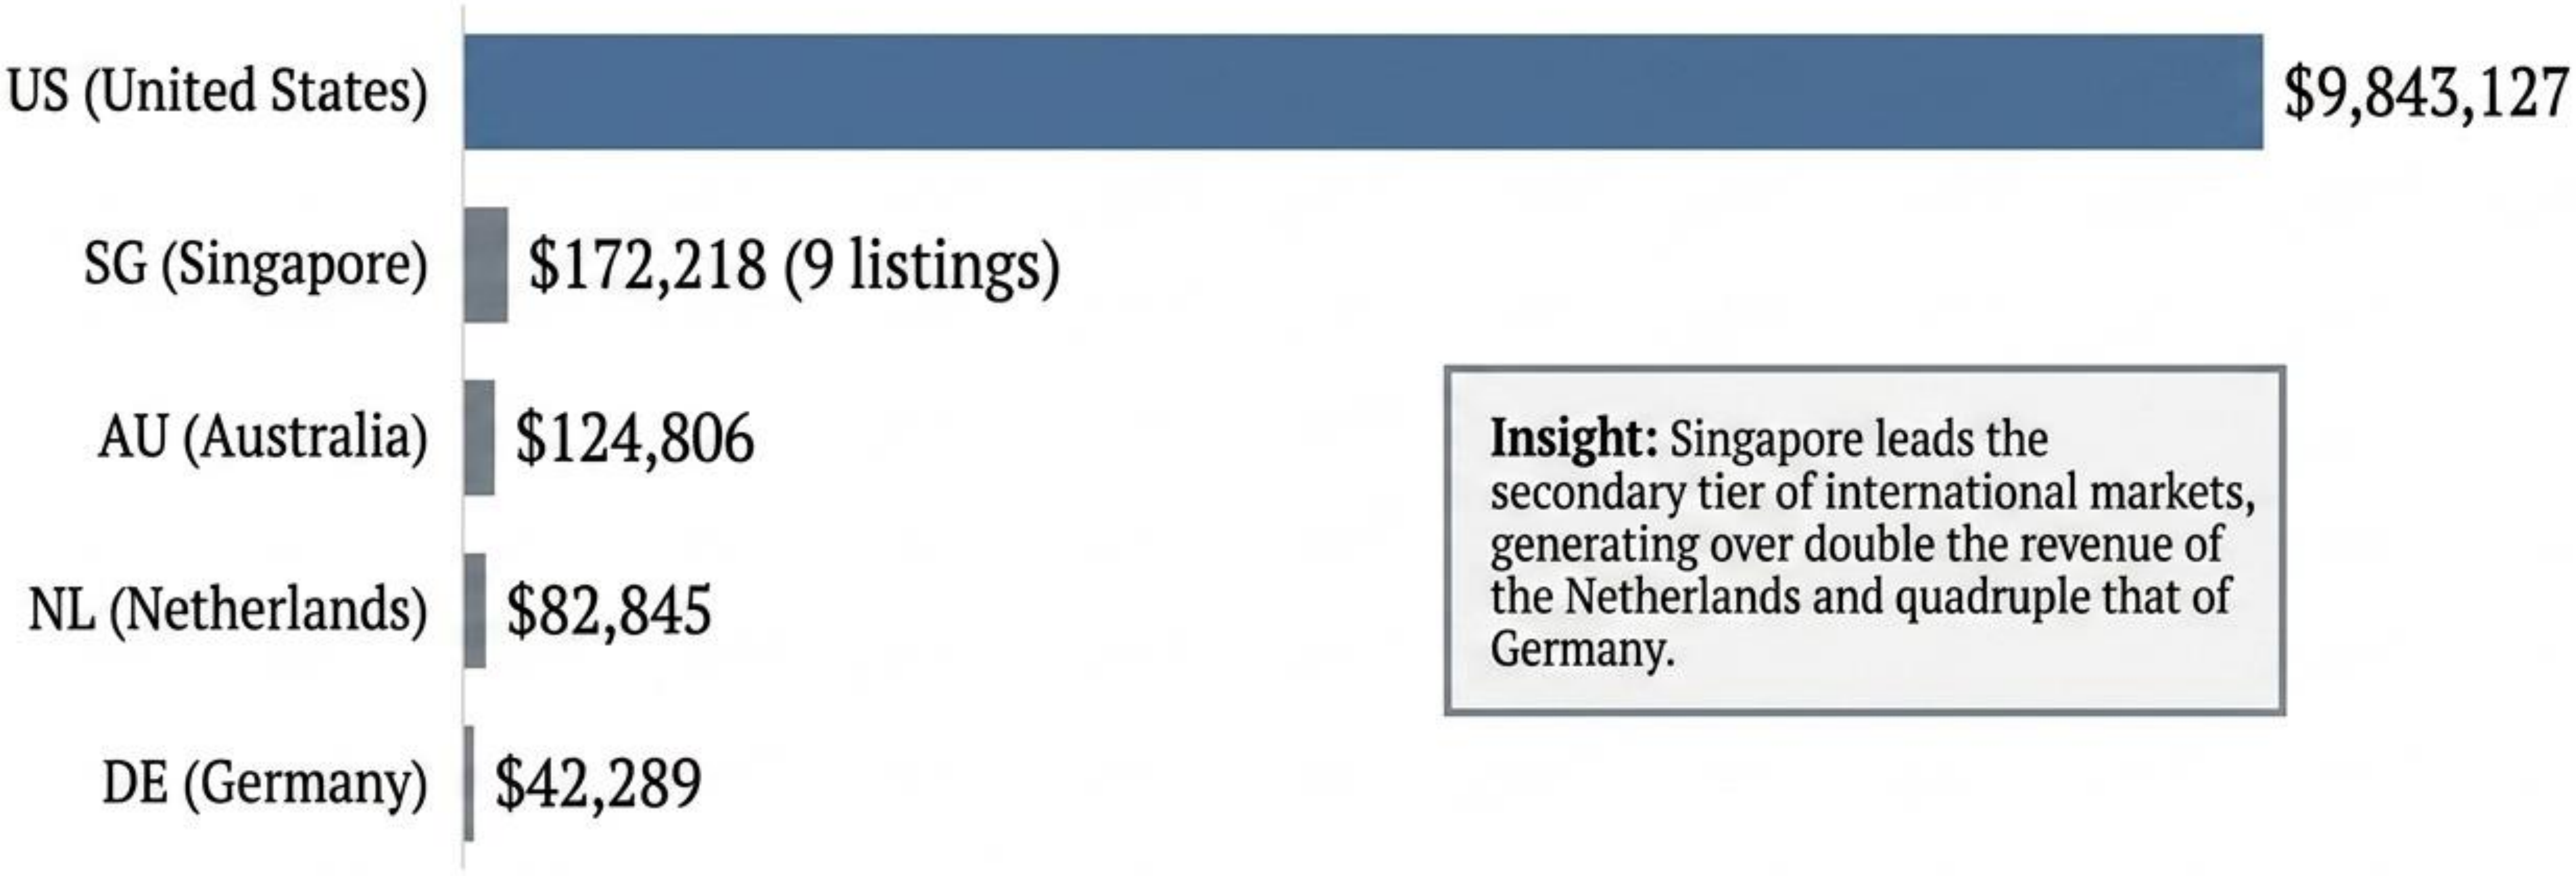
Analytics Note

The dataset contains zero blanks when correlating active subscriptions to revenue, allowing for a 100% complete pair analysis across the entire 1,000-row sample.

Global Revenue Distribution

The US market dominates total 30-day revenue, followed by a fragmented international landscape.

30-Day Revenue by Top Geographies (USD)

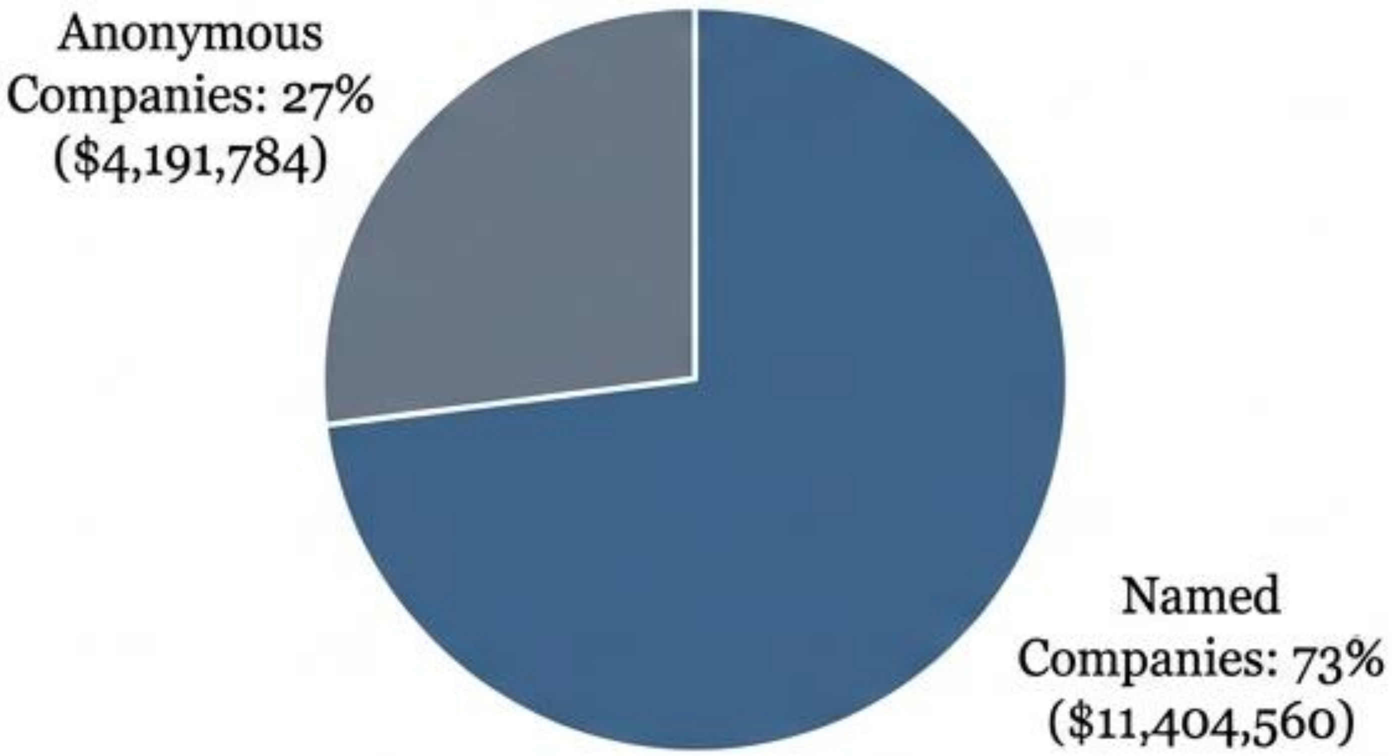


Insight: Singapore leads the secondary tier of international markets, generating over double the revenue of the Netherlands and quadruple that of Germany.

The Identity Premium

Named entities account for nearly three-quarters of total platform revenue.

Revenue Split: Named vs. Anonymous



(Note: 'Anonymous' includes blank names, 'Stealth Company', or 'Hidden Business')

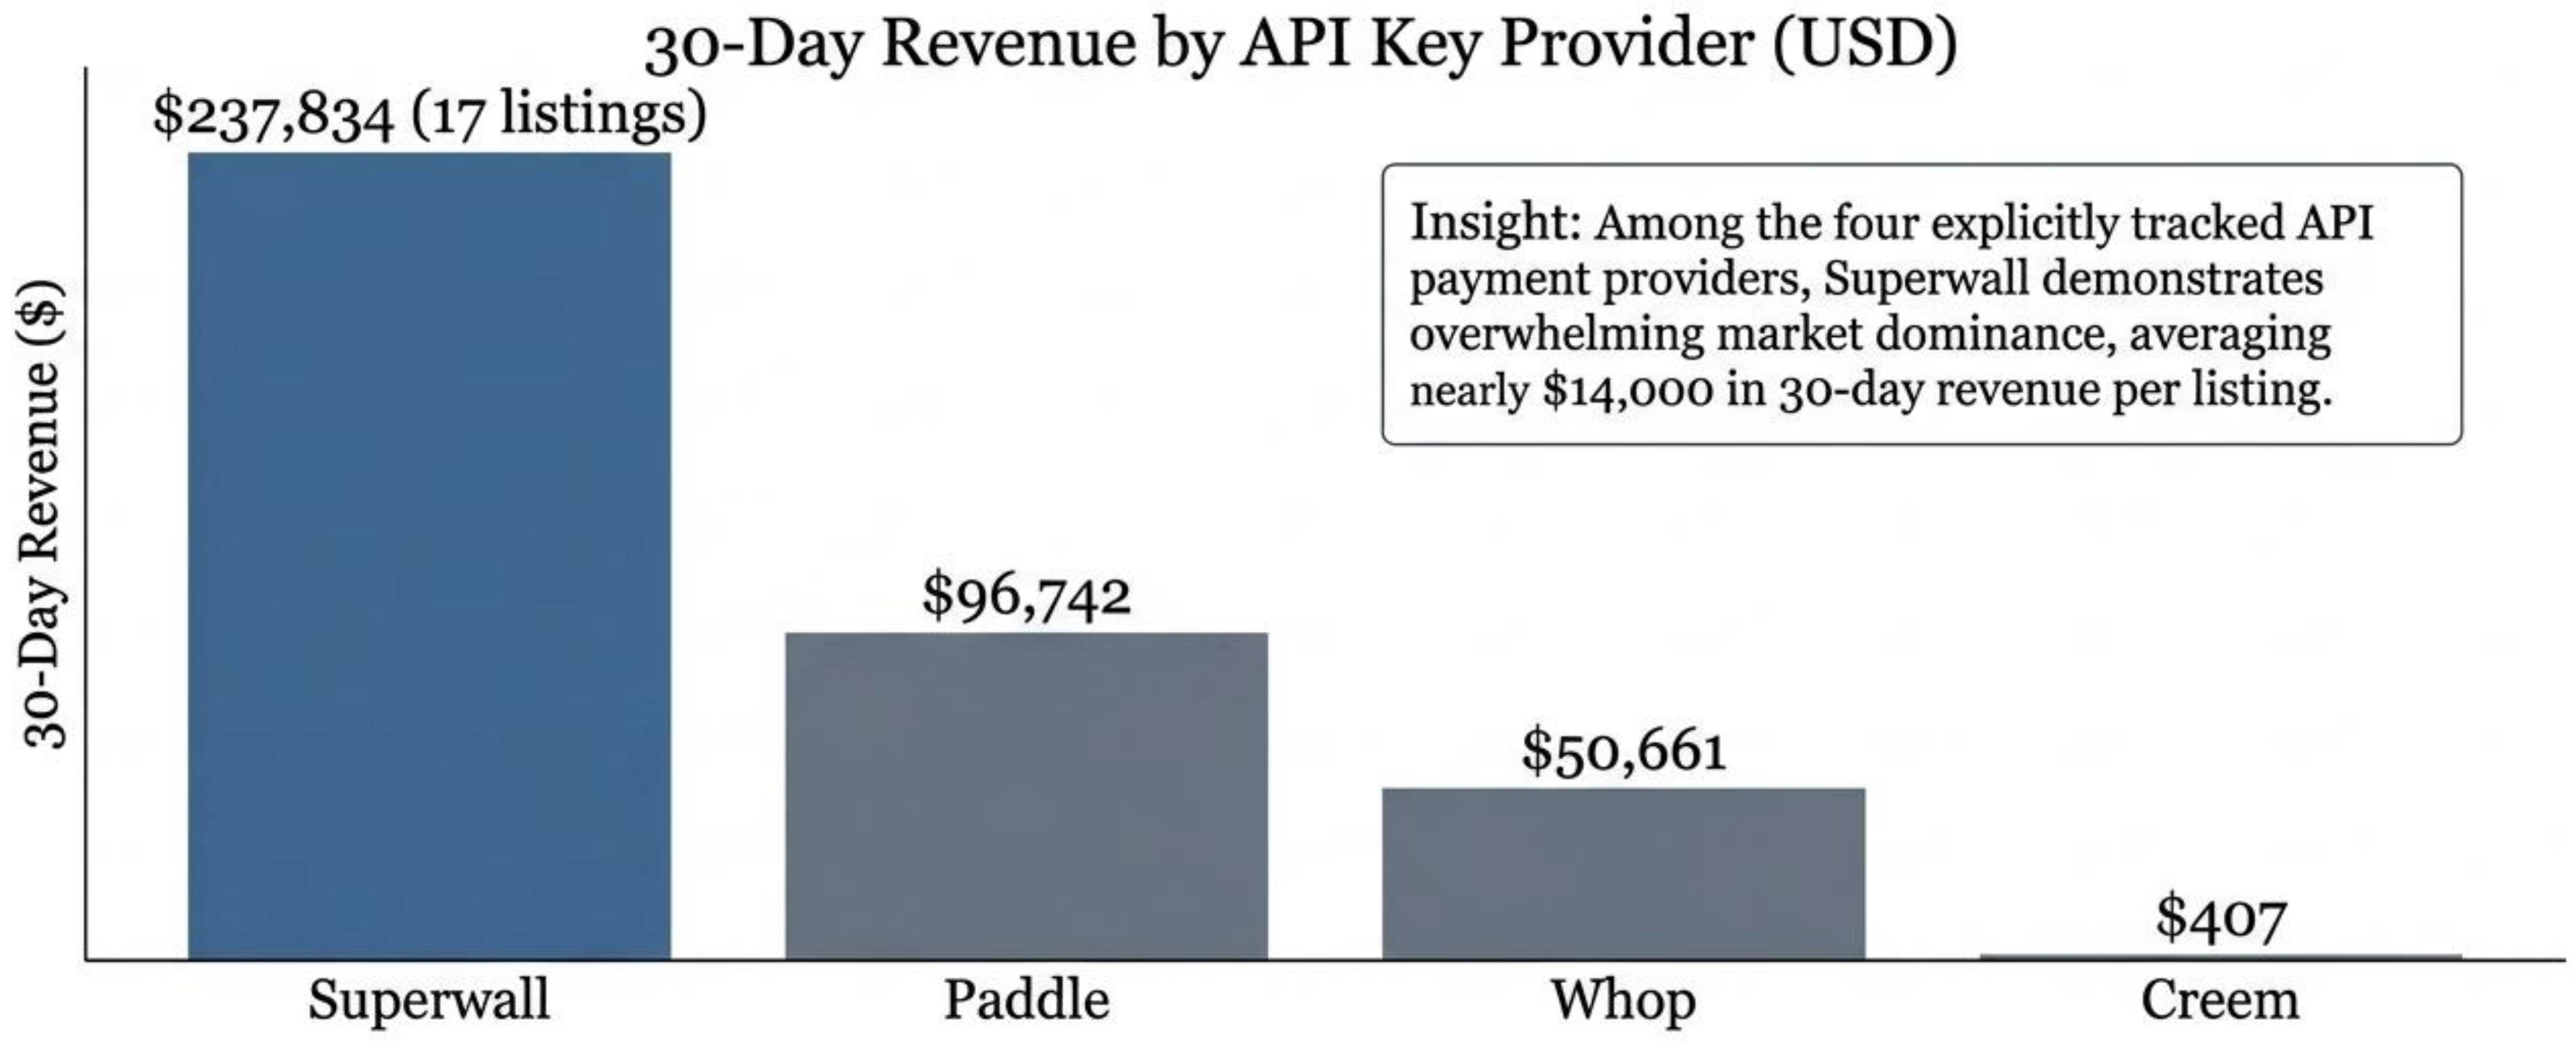
Listing Volume by Identity

Yield Analysis

While anonymous companies make up only 13% of the total listings, they punch above their weight, capturing 27% of the total 30-day revenue share.

Payment Infrastructure Breakdown

Superwall processes over 2.4x the total 30-day revenue of its closest competitor.

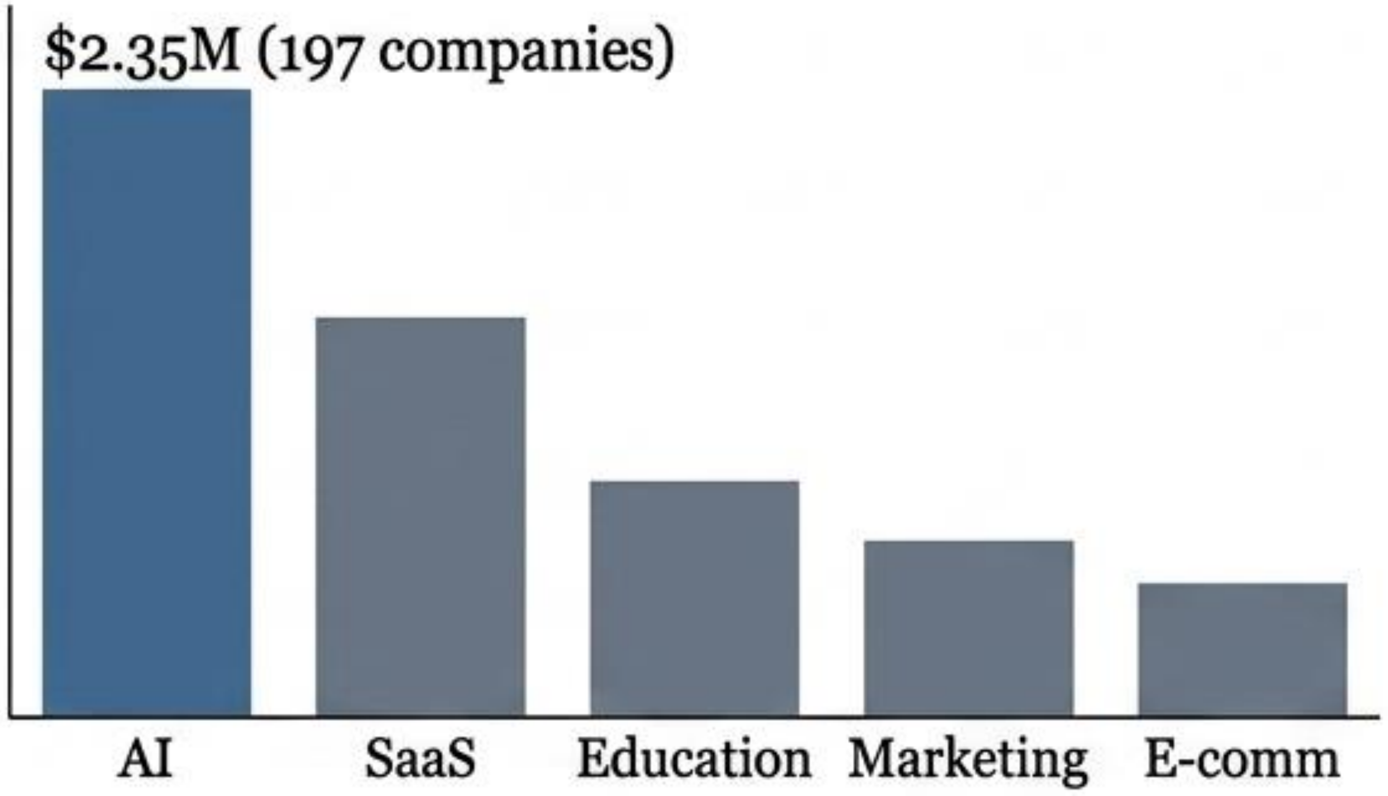


Category Analysis: Volume vs. Typical Performance

AI leads in total market size, but niche categories offer superior per-company unit economics.

The Volume Leaders (Total MRR)

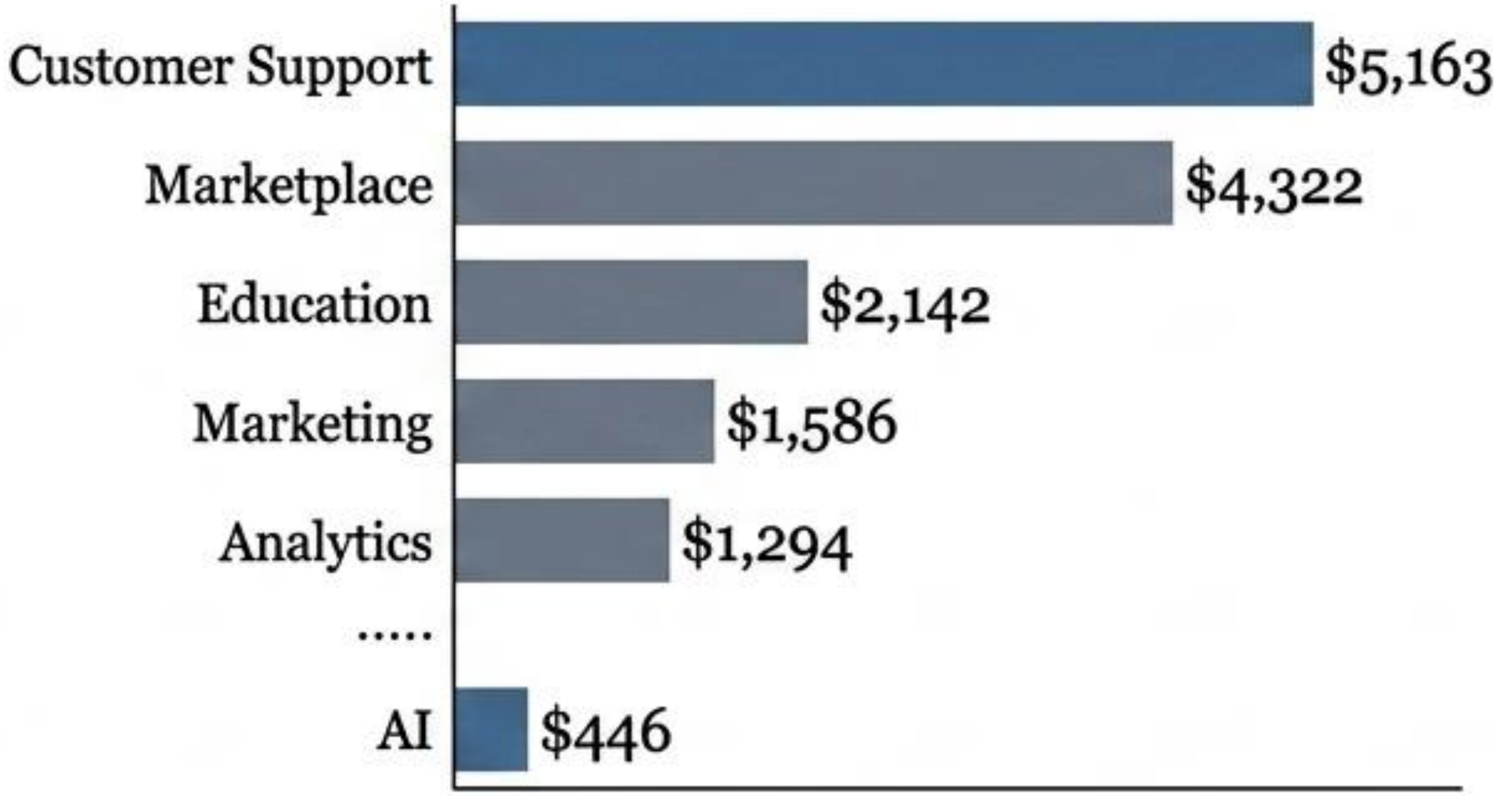
Categories by Total 30-Day Revenue



Takeaway: AI's massive total is driven by sheer listing volume and a handful of extreme outliers, masking lower typical earnings.

The Efficiency Leaders (Median MRR)

Categories by Typical (Median) MRR



Takeaway: A randomly selected Customer Support company is typically earning 11.5x more than a randomly selected AI company.

Deep Dive: Developer, Design, and E-comm Tools

Specific performance metrics across targeted operational categories.

Dev Tools

Total 30-Day Revenue

$163,402

Total Listings

37

Consistent mid-tier category performance with reliable revenue generation.

Design Tools

Total 30-Day Revenue

$31,797

Median MRR

$83

(12 total rows)

A smaller, fragmented category featuring modest typical earnings.

E-comm

Highest Average MRR

$20,829

Median MRR

$155

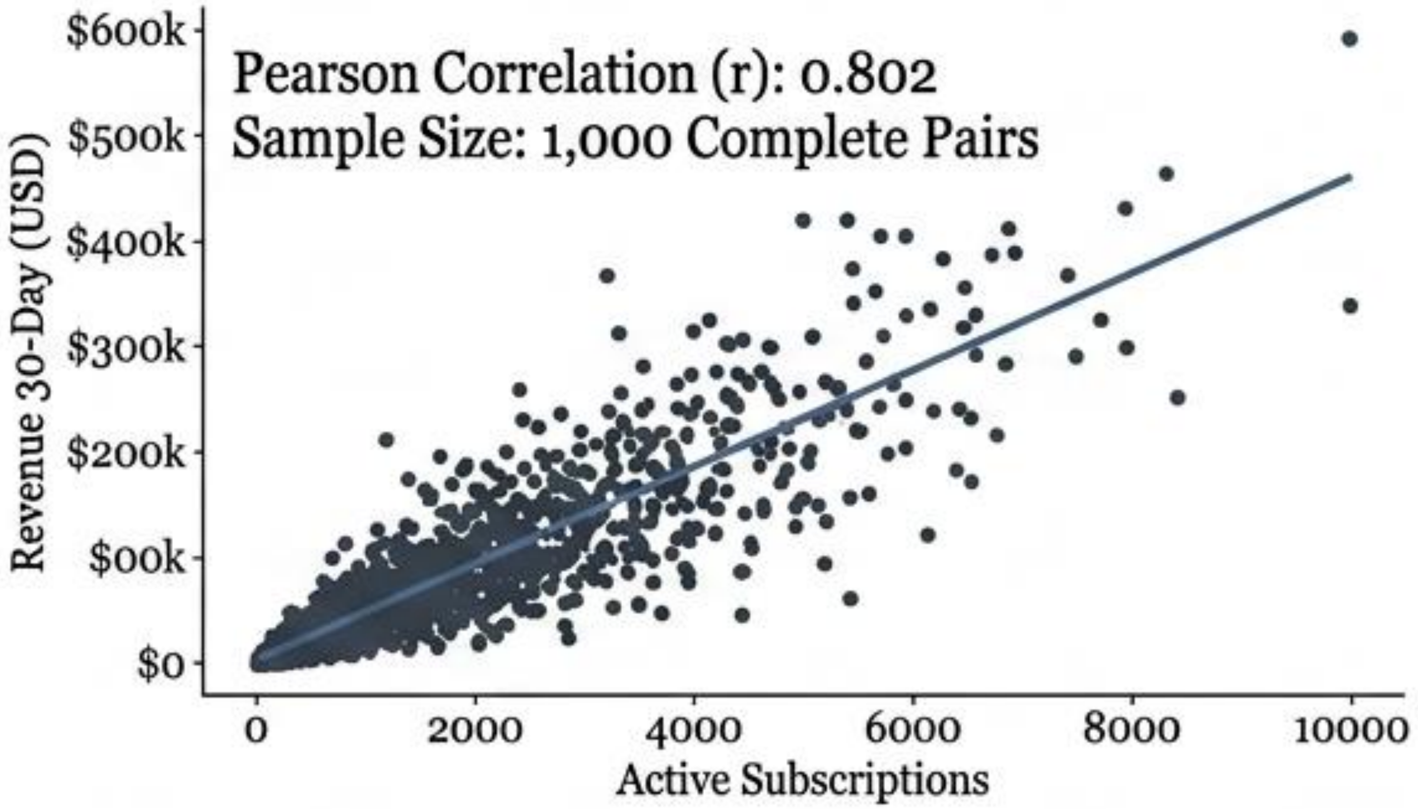
(19 total rows)

A highly polarised category driven by a few massive winners that heavily skew the average above the median.

Growth Predictors & Valuation

Statistical correlations and standard multiples observed within the dataset.

Subscription Correlation



Insight

A strong positive correlation (r = 0.802) exists between active subscriptions and 30-day revenue, establishing subscriptions as a highly reliable leading indicator.

Valuation Metrics & Social Indicators

Median Revenue Multiple

2.30x

(Calculated across 262 on-sale listings)

Social Media Correlation

Python Colab Script Execution

Analysis of the top sample pairs reveals measurable Pearson and Spearman correlations between X (formerly Twitter) followers and 90-day trailing revenue, indicating social audience is a viable predictor of financial performance.

TrustMRR Executive Dashboard

Unified visual synthesis of the 1,000-Row Dataset (30 Jul 2026).

Total 30-Day Revenue	Total Companies	Top Revenue Category	Highest Revenue Country	Pearson Correlation
$15.6M	1,000	AI	US	r = 0.802

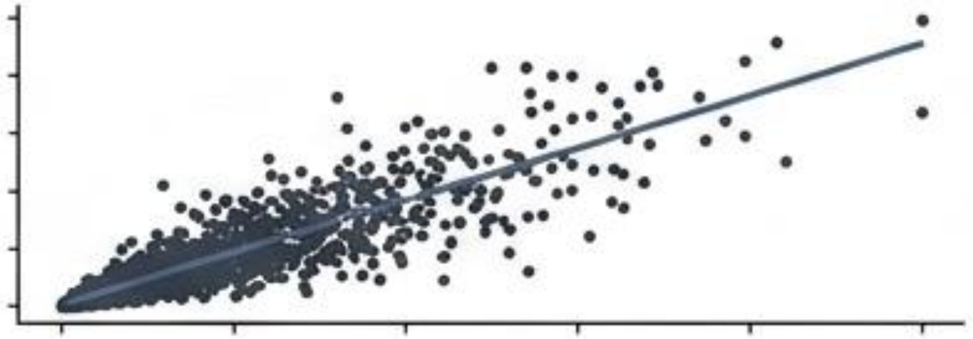
Active Subscriptions vs Revenue



Median MRR by Category

Strategic Conclusions

Final takeaways for platform operators, investors, and analysts.

1. The AI Valuation Trap

While AI commands the highest total market revenue ($2.35M), this is an illusion of volume. The median AI company earns only $446/month. Investors seeking strong unit economics should look to Customer Support and Marketplaces.

2. The Power Law of E-commerce

E-comm displays the most extreme variance in the dataset. A median MRR of just $155 is contrasted by a category-leading average MRR of $20,829, indicating a market dominated by a few monopolistic winners.

3. Geographical and Infrastructure Monopolies

The US is the undisputed geographical leader ($9.8M+), while Superwall acts as the dominant payment infrastructure, processing more than all other explicitly tracked providers combined.

4. Predictive Reliability

Active subscriptions remain the gold standard for predicting revenue ($r = 0.802$). Furthermore, standard market liquidity prices these assets at a highly consistent 2.30x median revenue multiple.
