AN INVESTMENT CASE FOR SAAS, BUILT FROM 1,000 REAL COMPANIES

The Bootstrapped SaaS Opportunity

What a live dataset of 1,000 revenue-generating SaaS companies tells us about market breadth, power-law upside, capital efficiency, and exit liquidity.

Prepared for prospective investors · Source: TrustMRR dataset, frozen 30 Jul 2026

THE MARKET

A market too large and too fragmented to ignore

This dataset alone captures 1,000 independently operated SaaS businesses spanning nearly every corner of software — proof that durable, recurring-revenue companies are being built everywhere, not just in a handful of hubs.

1

1,000

revenue-generating SaaS companies

2

29

distinct software categories

3

65

countries represented

4

$133.8M

combined trailing 12-month revenue

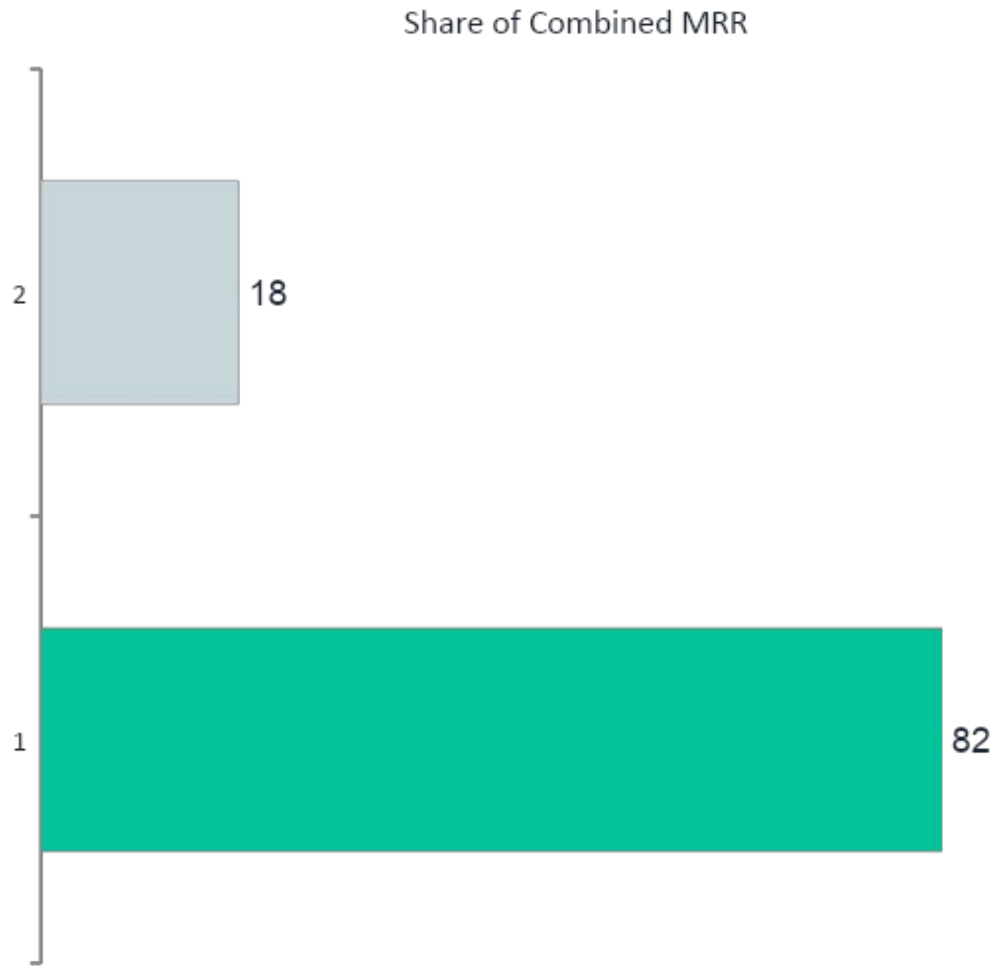
Top markets by company count: United States, France, India, United Kingdom, Canada, Germany, Brazil, Hong Kong — recurring-revenue software is a genuinely global asset class.

A textbook power law — exactly how venture wins

Revenue is heavily concentrated in a small set of outperformers. That concentration is not a warning sign — it is the same skewed distribution that underwrites every successful venture portfolio: a small number of breakouts generate the overwhelming share of value.

82% of combined MRR is generated by just the top 10% of companies (100 of 1,000)

48% of combined MRR comes from the top 1% alone — 10 companies



GROWTH

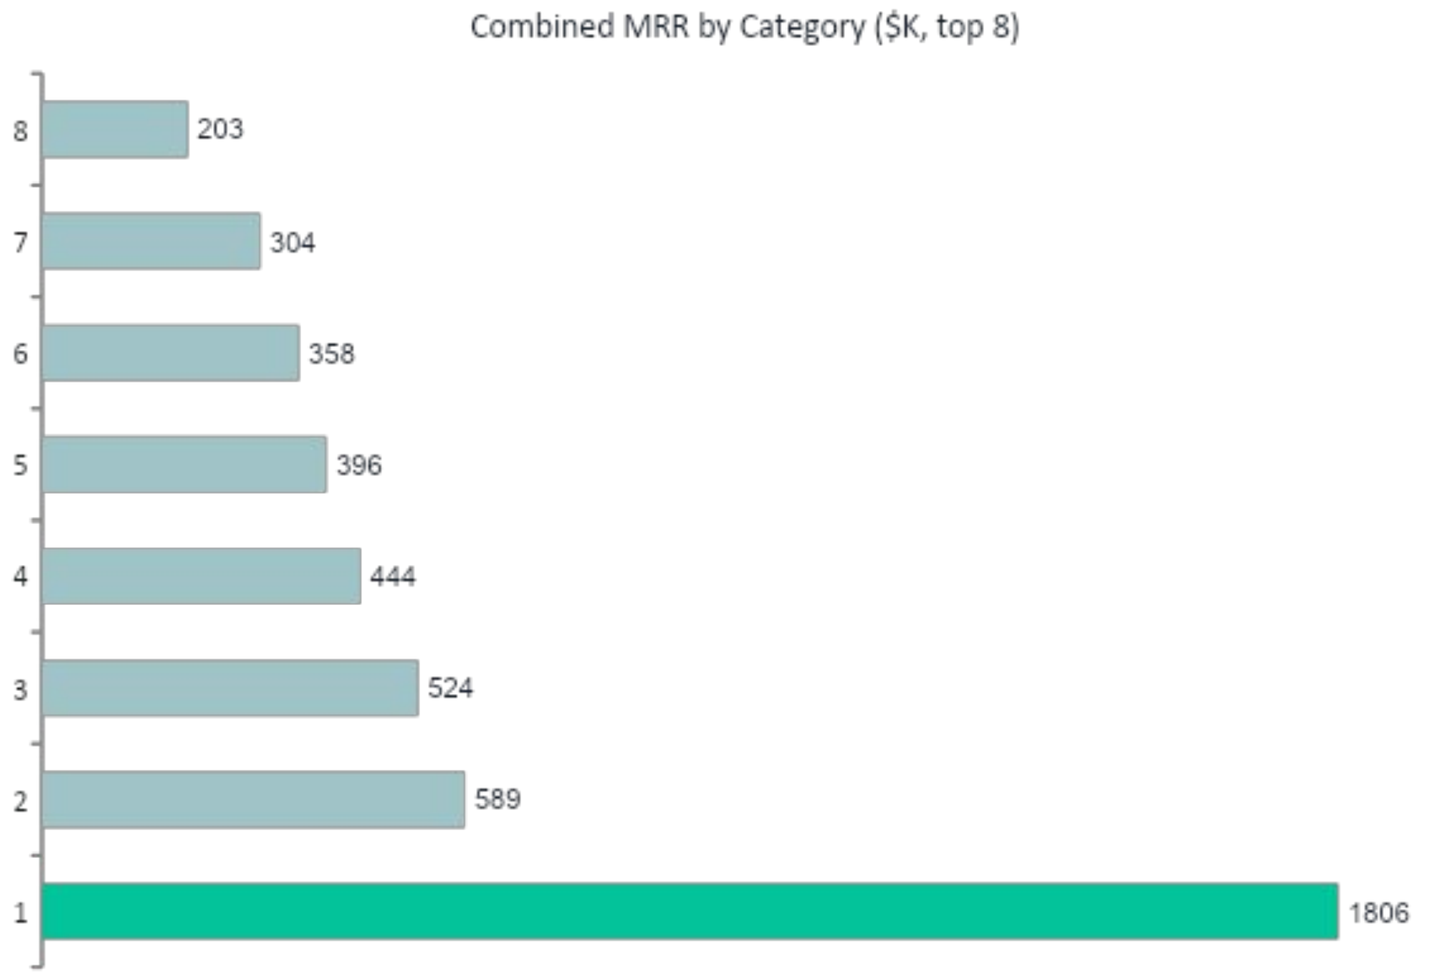
A real, compounding growth cohort

133 companies compounding at 20%+ month-over-month

8x+ illustrative annualized growth if a 20%/mo pace holds for 12 months

173 companies growing faster than 10% every month

AI is redrawing where SaaS value concentrates



31%

of all combined MRR in the dataset flows through AI-native products alone

(197 companies — nearly 1 in 5 in the dataset)

Category breadth matters for portfolio construction: SaaS, education, marketing, e-commerce, and analytics tools each cleared $350K+ in combined monthly recurring revenue — durable demand exists well beyond any single vertical.

CAPITAL EFFICIENCY

Lean by default — efficiency is built into the model

These companies were not built on paid-hype flywheels. Many reach meaningful recurring revenue with minimal social distribution — evidence of product-led growth and disciplined spend, which lowers the capital required per dollar of ARR and extends runway between rounds.

1

110

companies earn $5K+ in monthly recurring revenue with fewer than 100 social followers

2

$0.40

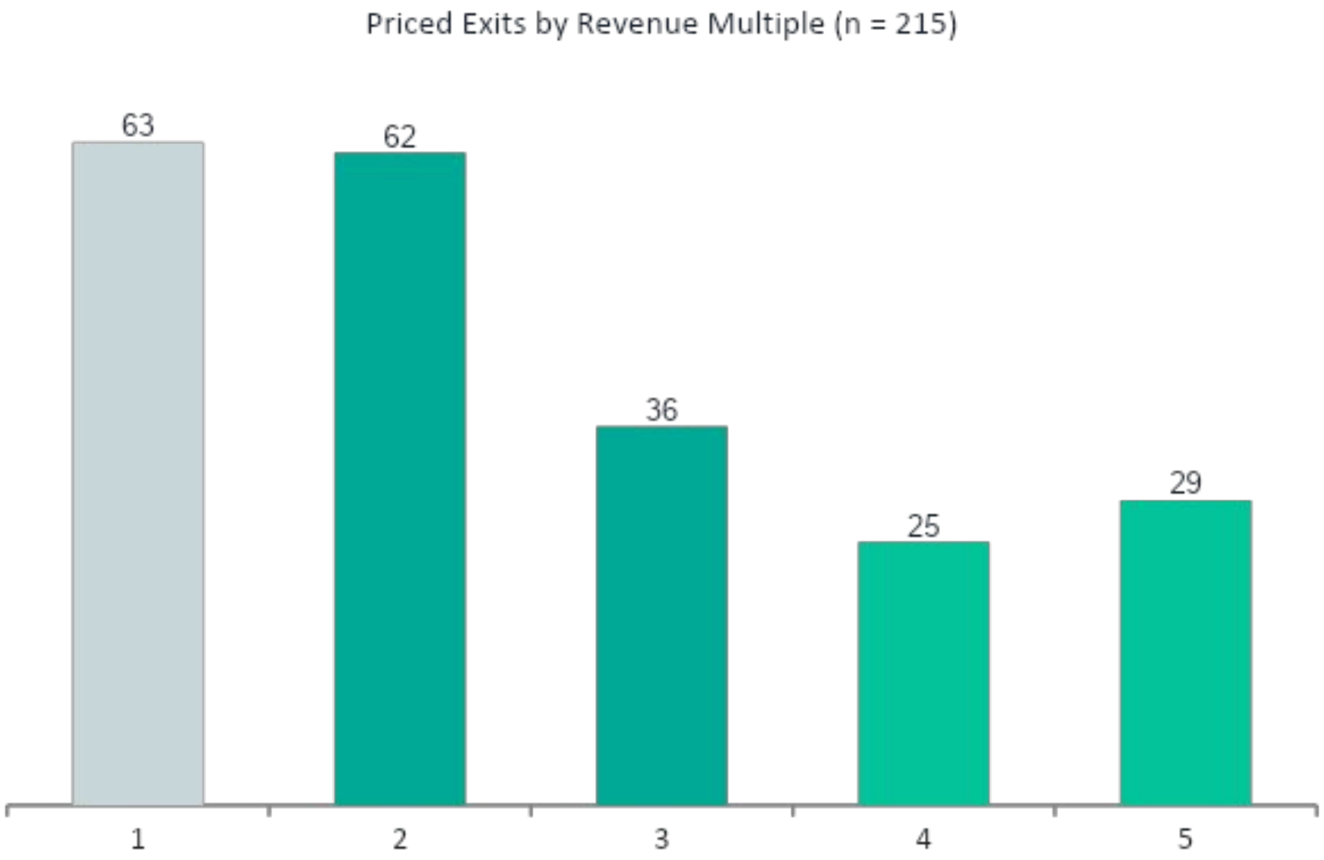
median revenue generated per website visitor — real monetization, not vanity traffic

3

500

median active subscriptions per company — durable, diversified customer bases

A real, active secondary market already exists



Median exit multiple: 3.0x trailing revenue · 90th percentile: 11.1x

262

companies (26% of the dataset) are actively listed for sale today

Asking price range

Median asking price	$35,000
Average asking price	$332,500
Top listings	up to $10.0M

A liquid, transparent buyer pool for cash-flowing SaaS assets means clearer mark-to-market signals and realistic paths to exit at every stage.

PROOF POINTS

Meet the outliers driving the return curve

Company	Category	Country	MRR	30-Day Growth	Subscribers
GojiberryAI	AI	US	**$494,668**	+23.6%	4,642
Rezi	AI	US	**$259,701**	−4.9%	10,749
Kibu	Education	US	**$234,319**	+52.8%	375
Cometly	Analytics	US	**$207,616**	+3.0%	307
1Lookup	SaaS	US	**$207,064**	−7.5%	655
Brand On Demand, Inc.	E-commerce	US	**$187,459**	−1.8%	3,631
Postiz	Social Media	HK	**$177,102**	+15.0%	5,237
PROSP	AI	FR	**$128,005**	n/a	1,108

Across 1,000 companies, the ceiling is high, growth is often abrupt, and outsized winners emerge from every category and geography — precisely the dynamic disciplined early capital is built to capture.

Four reasons SaaS deserves a place in the portfolio

01

A market too big to miss

1,000 companies, 29 categories, 65 countries — and this is one slice of the market. SaaS demand is global and category-diversified.

02

Power-law upside

The top 10% already capture 82% of combined MRR. The return profile venture is built for is visible in the data today.

03

Capital-efficient growth

Product-led, low-hype growth engines mean less capital is required to reach scale, and runway stretches further between rounds.

04

Proven exit liquidity

262 active listings and a real multiple curve (median 3.0x, up to 11x+) show buyers already pay for these businesses.

THE DATA MAKES THE CASE

Let's back the outliers.

A market this large, a return profile this skewed, and an exit market this active is a rare combination. We'd welcome the opportunity to walk through the full dataset and our sourcing pipeline.
