STARTUP MARKET ANALYSIS

The TrustMRR Startup Landscape

What 1,000 real startup listings reveal about revenue, growth, and where the deal value actually is

Snapshot frozen 30 Jul 2026 · Analysis prepared 3 Aug 2026 · 1,000 startups across 65 countries

Executive summary

Four things to know before the detail — each one is unpacked in the slides that follow.

1. Revenue is extremely concentrated — the top 10% of startups hold 82% of all MRR, so lead with medians, not averages.
2. Volume and value diverge — AI dominates listing count; Education, Marketing and Sales monetize best per listing.
3. B2B out-earns B2C per user by roughly 3–6x, despite having 146 fewer listings in this dataset.
4. Cheap deals aren't automatically good deals — only 1 in 10 shortlisted for-sale listings pairs a low price with real growth.

Most startups are tiny. A handful are enormous.

Revenue in this dataset is heavily concentrated — which is why every comparison ahead uses the median, not the average.

MEDIAN MRR
(typical startup)

$282

Half of all listings earn less than this per month

MEAN MRR
(skewed by outliers)

$13,472

47x the median — a few breakout stars pull this way up

TOP 10% OF STARTUPS

82%

of all monthly recurring revenue in the entire dataset

What this means

Almost half of this dataset's total MRR sits with the top 1% of listings alone. Every category, country and audience comparison ahead uses the median for exactly that reason.

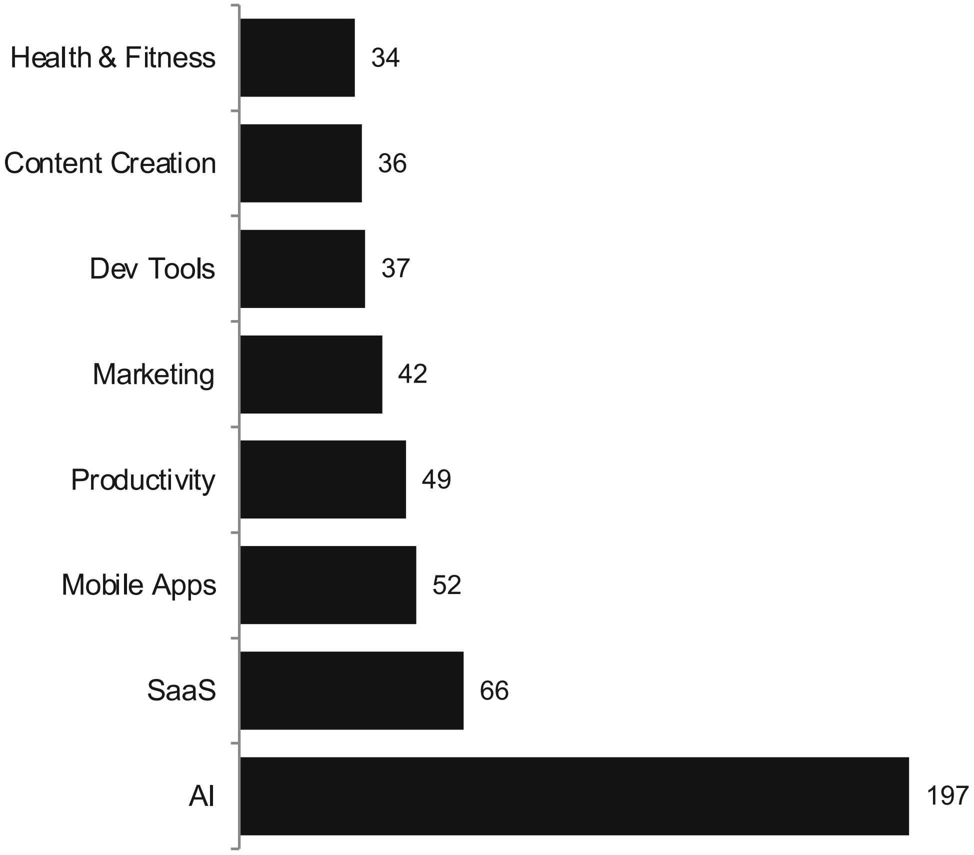
CONCENTRATED, NOT DIVERSIFIED

That top decile is concentrated, too: of top-10% listings with a known country, 55% are US-based; of those with a known category, 23% are AI. An investor reading “top 10% = 82% of MRR” should hear “a handful of US/AI winners,” not a diversified market.

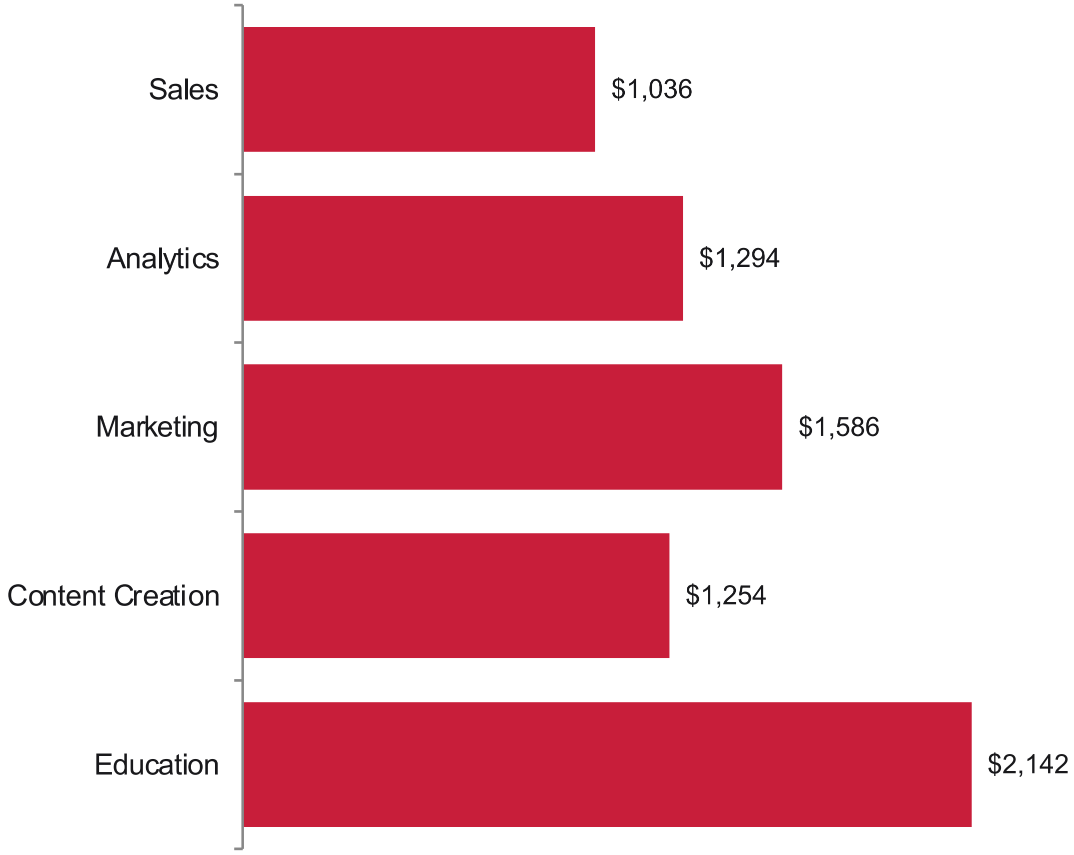
AI wins on volume. Education and Marketing win on value.

Category size (# of listings) vs. category economics (median MRR per listing) tell two different stories.

MOST LISTED CATEGORIES



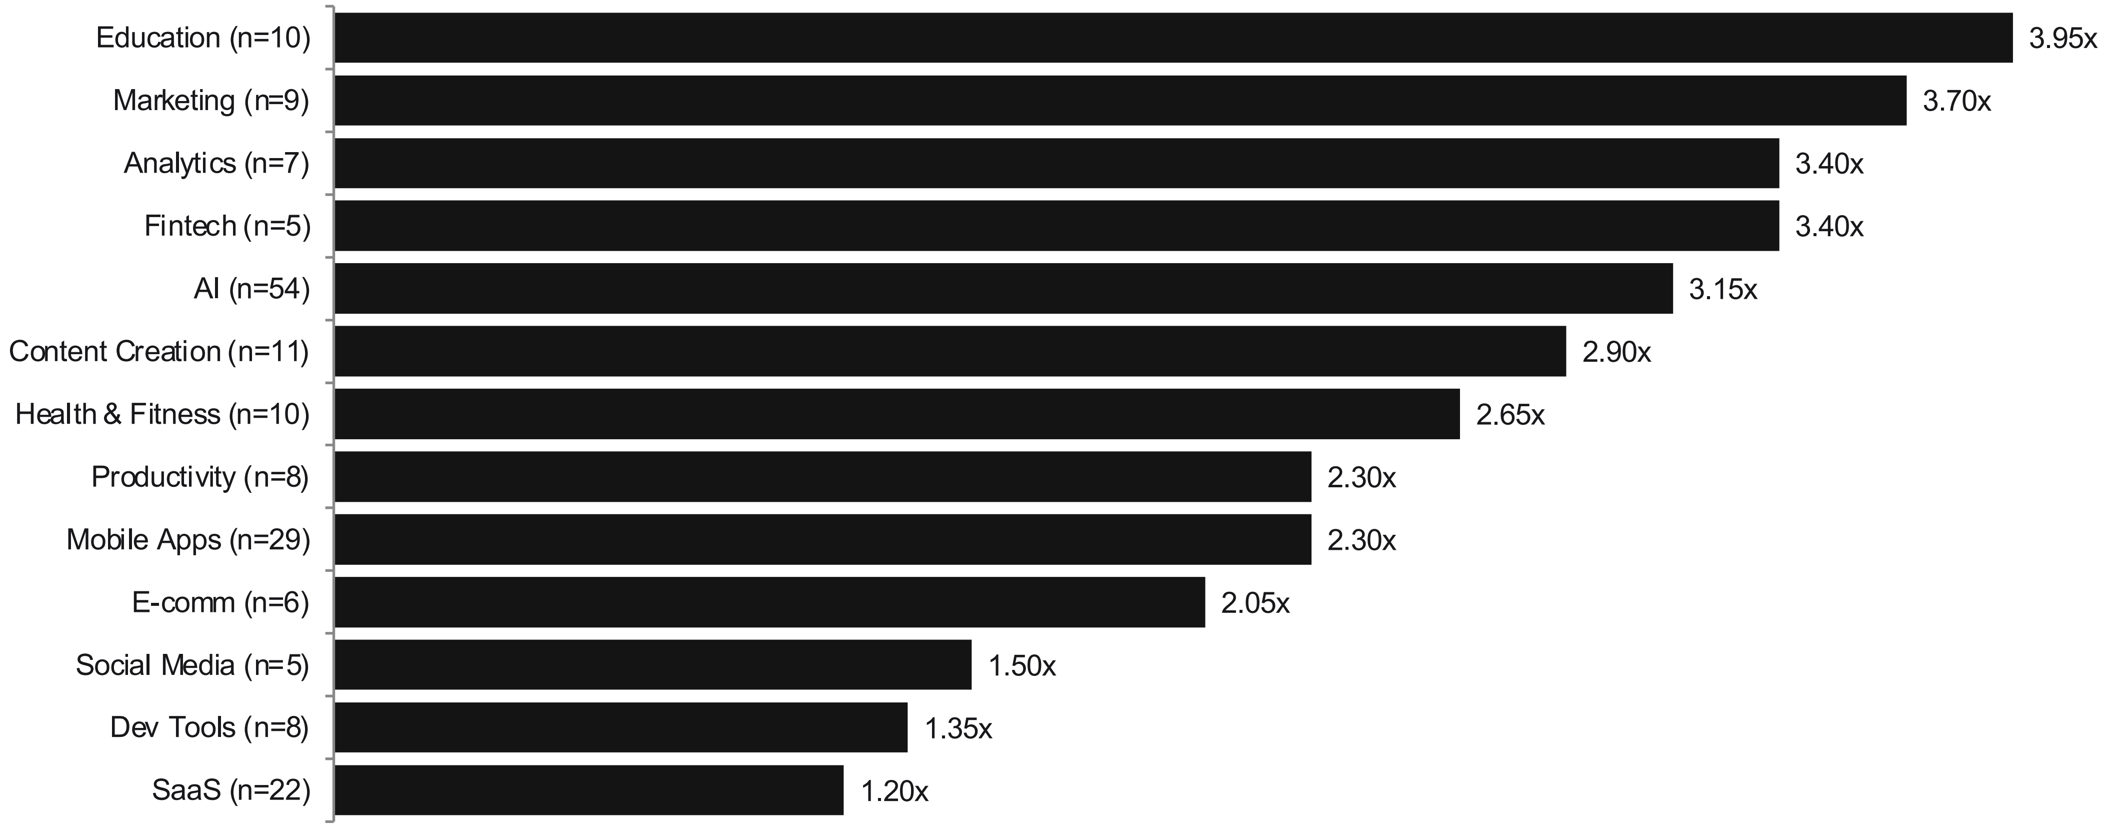
HIGHEST-EARNING CATEGORIES (MEDIAN MRR)



AI accounts for 1 in 5 listings but a below-median MRR ($446) — volume, not monetization. Education has only 30 listings yet the highest typical MRR of any sizeable category.

What should you actually pay? Multiples vary far more by category than by market average.

Median revenue multiple (asking price ÷ revenue) among the 262 for-sale listings with a stated multiple, market median 2.3x — categories with fewer than 5 priced listings are excluded as unreliable.



Education, Marketing and Analytics command the richest multiples; AI — the most-listed category — trades at a more modest 3.15x, which is also the most reliable number here given its sample size. Sales, News & Magazines, Customer Support, Community and Entertainment are omitted: each has under 5 priced listings.

Scale and monetization don't move together across countries.

The US leads on both listing count and typical revenue. Others lead on one but not the other.

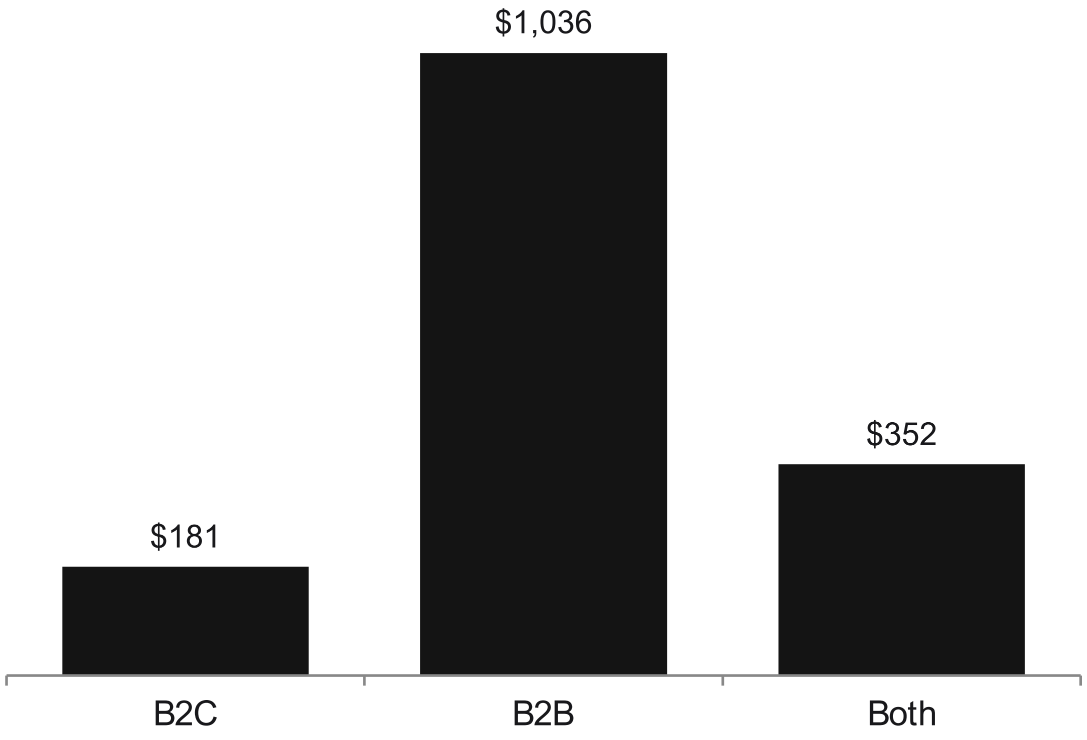
Country	# Listings	Median MRR	Read
United States	258	$1,263	*Leads on both count and economics*
France	79	$435	*Large audiences, modest monetization*
India	59	$6	*High volume of very early-stage listings*
United Kingdom	50	$153	*High count, low typical revenue*
Canada	29	$919	*Small base, strong per-listing economics*
Singapore	9	$2,126	*Tiny base, 2nd-highest MRR of any country*

65 countries appear in the dataset; the top 5 by count hold under half of all non-blank rows — outside the top 10, country-level comparisons get noisy fast.

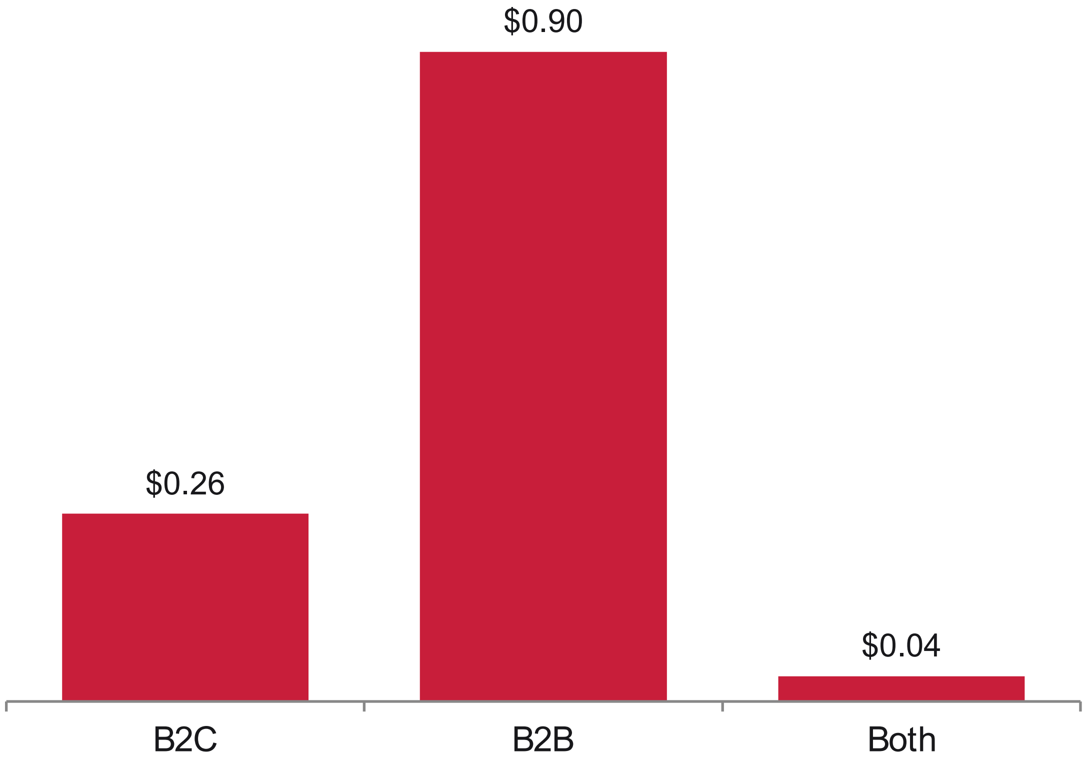
B2B startups earn more from fewer people.

401 startups target consumers, 255 target businesses — but the B2B group monetizes far more efficiently.

MEDIAN MRR BY AUDIENCE TYPE



MEDIAN REVENUE PER VISITOR ($)

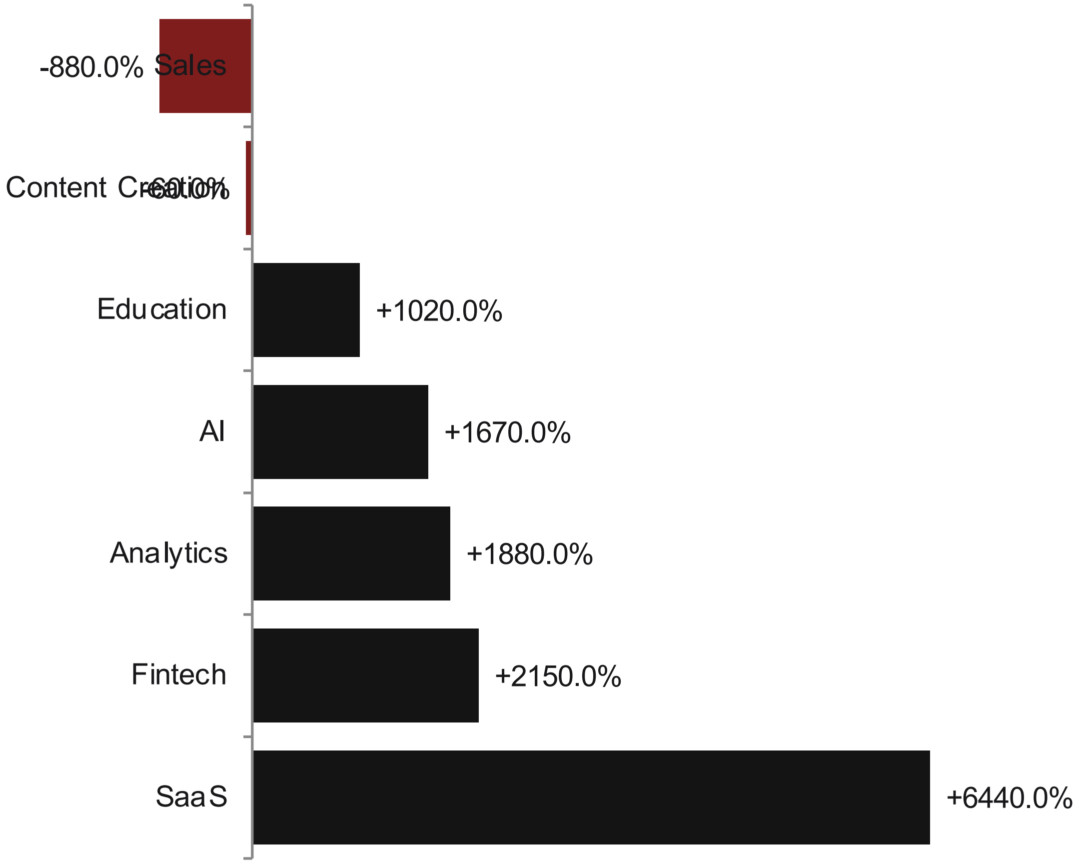


B2B's median MRR is 5.7x B2C's, and its revenue-per-visitor is 3.5x higher — fewer users, better-monetized. Caveat: revenue-per-visitor is populated for under 20% of rows, so treat it as directional.

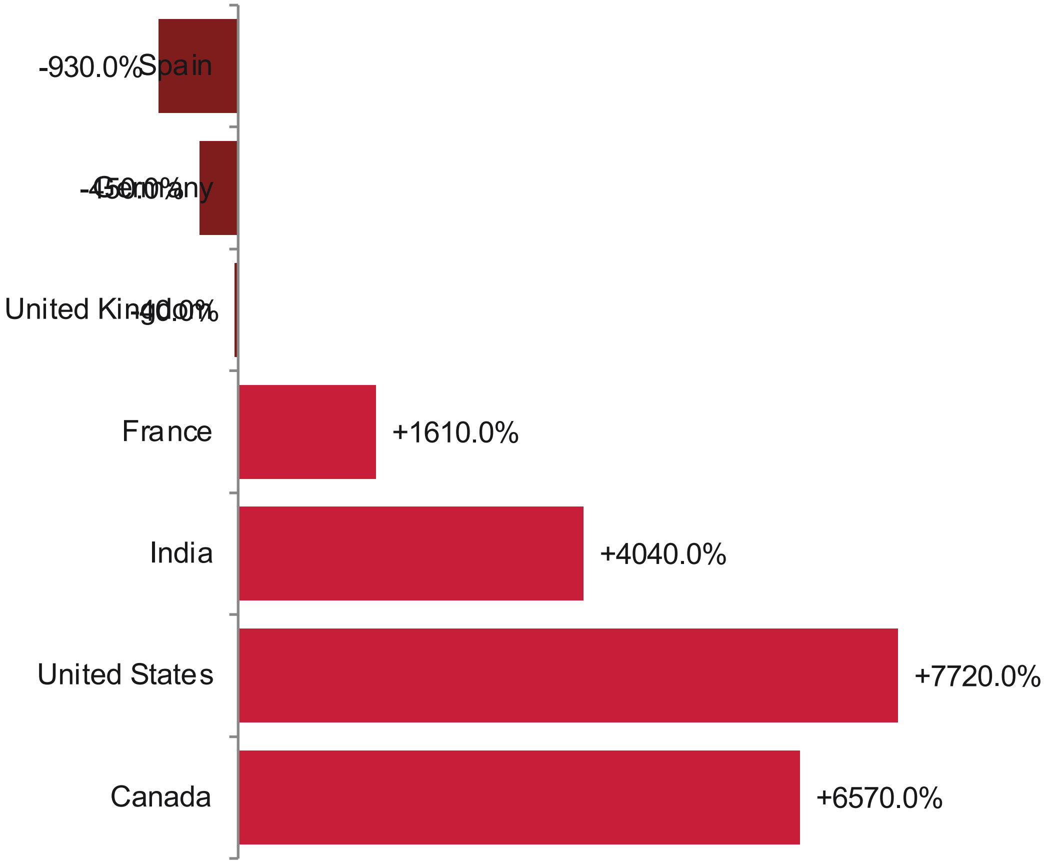
Growth is concentrated too — and it's not where the volume is.

Average 30-day MRR growth by category and by country — diverging bars show who's expanding vs. shrinking.

BY CATEGORY



BY COUNTRY



SaaS is the fastest-growing category despite mid-tier revenue; the US and Canada are pulling most of the country-level growth, while GB, DE and ES are flat to shrinking.

How to read this data

Four things worth knowing before the deal-specific analysis that follows.

Self-reported, not audited

MRR and revenue figures come from each startup's own payment provider (mostly Stripe) as submitted to TrustMRR — treat absolute dollar figures as directional, especially for very early listings.

Selection bias

This is who chose to list on TrustMRR, not a random sample of startups globally. Category and country mixes reflect that marketplace's audience, not the broader startup population.

A snapshot, not a live feed

Frozen 30 Jul 2026. “On sale” status and asking prices move fast on marketplaces like this — verify current status before acting on anything in the Deal Sourcing analysis ahead.

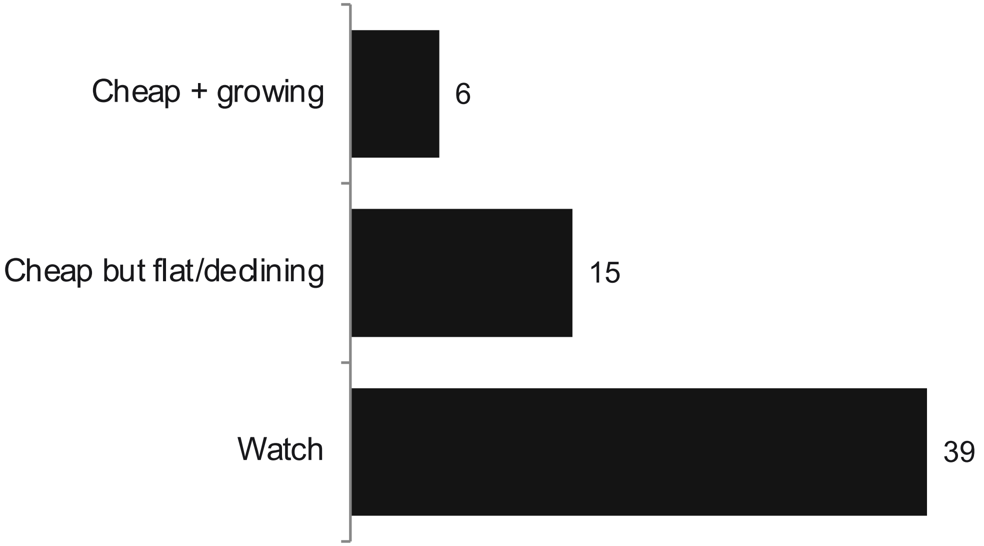
Real gaps in the data

Category is blank for 27% of rows, country for 24%; traffic fields are populated for under 20%. Small groups (e.g. Singapore, n=9) carry more uncertainty. Also: domain_rating barely correlates with MRR here ($r \approx 0.21$) — don't treat it as a moat proxy.

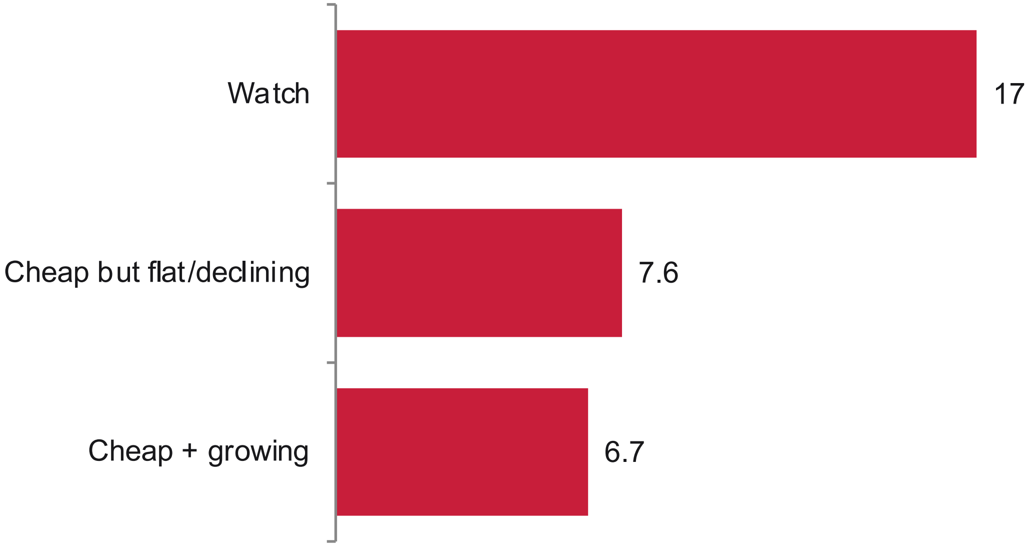
Cheap alone isn't a deal. Cheap and growing is.

Screening the 224 for-sale listings with a valid asking price and positive MRR, ranked by payback period.

SHORTLIST BREAKDOWN



MEDIAN PAYBACK PERIOD (MONTHS)



Only 10% of shortlisted listings combine a low asking price with real growth — the rest are cheap because momentum has stalled, or still priced too rich for their cash flow.

“Watch” listings take 2.5x longer to earn back their asking price than the growing shortlist — worth a second look before assuming a low headline price is a bargain.

The six listings worth a first look

Every “Cheap + growing” listing in the shortlist — low payback period paired with positive MRR growth.

Startup	Category	Country	MRR	Payback	MRR Growth
Reloop	Marketing	LU	$1,119	4.5 mo	**+24.3%**
Linkeddit	Sales	CA	$1,036	4.8 mo	**+90.1%**
JuggleHire	Recruiting & HR	BD	$1,817	6.6 mo	**+9.6%**
Leadbomb	SaaS	US	$3,633	6.9 mo	**+38.9%**
Delta Sports	SaaS	US	$1,076	9.3 mo	**+19.9%**
Kickly — Pronos IA*	Games	FR	$10,236	9.8 mo	**+384.5%***

*This is a screening shortlist, not a recommendation — payback ignores acquisition costs, taxes, and any MRR change after a sale. *Kickly's +384.5% implies a jump from ~$2,113 to $10,236 MRR in one month — verify it's a durable gain (e.g. a new contract) before pricing it in, not a data or reporting anomaly.*
