TRUSTMRR 1,000 · DATA FROZEN 30 JULY 2026

Where the Money Actually Is

$13.5M

aggregate monthly recurring revenue

1,000 companies with payment-processor verified revenue.
What the numbers say about how software businesses really perform.

Prepared for the executive team · Runtime 18–20 minutes

THE MARKET AT A GLANCE

One thousand companies, $134M in annual revenue, half a million paying subscriptions

$13.5M
Monthly recurring revenue

$133.8M
Trailing 12-month revenue

500,597
Active paid subscriptions

$334M
Cumulative lifetime revenue

The average company here earns $13,000 a month.

The median company earns $282. That gap is the entire story.

CONCENTRATION

Ten companies own half the market

Share of total monthly recurring revenue across all 1,000 companies

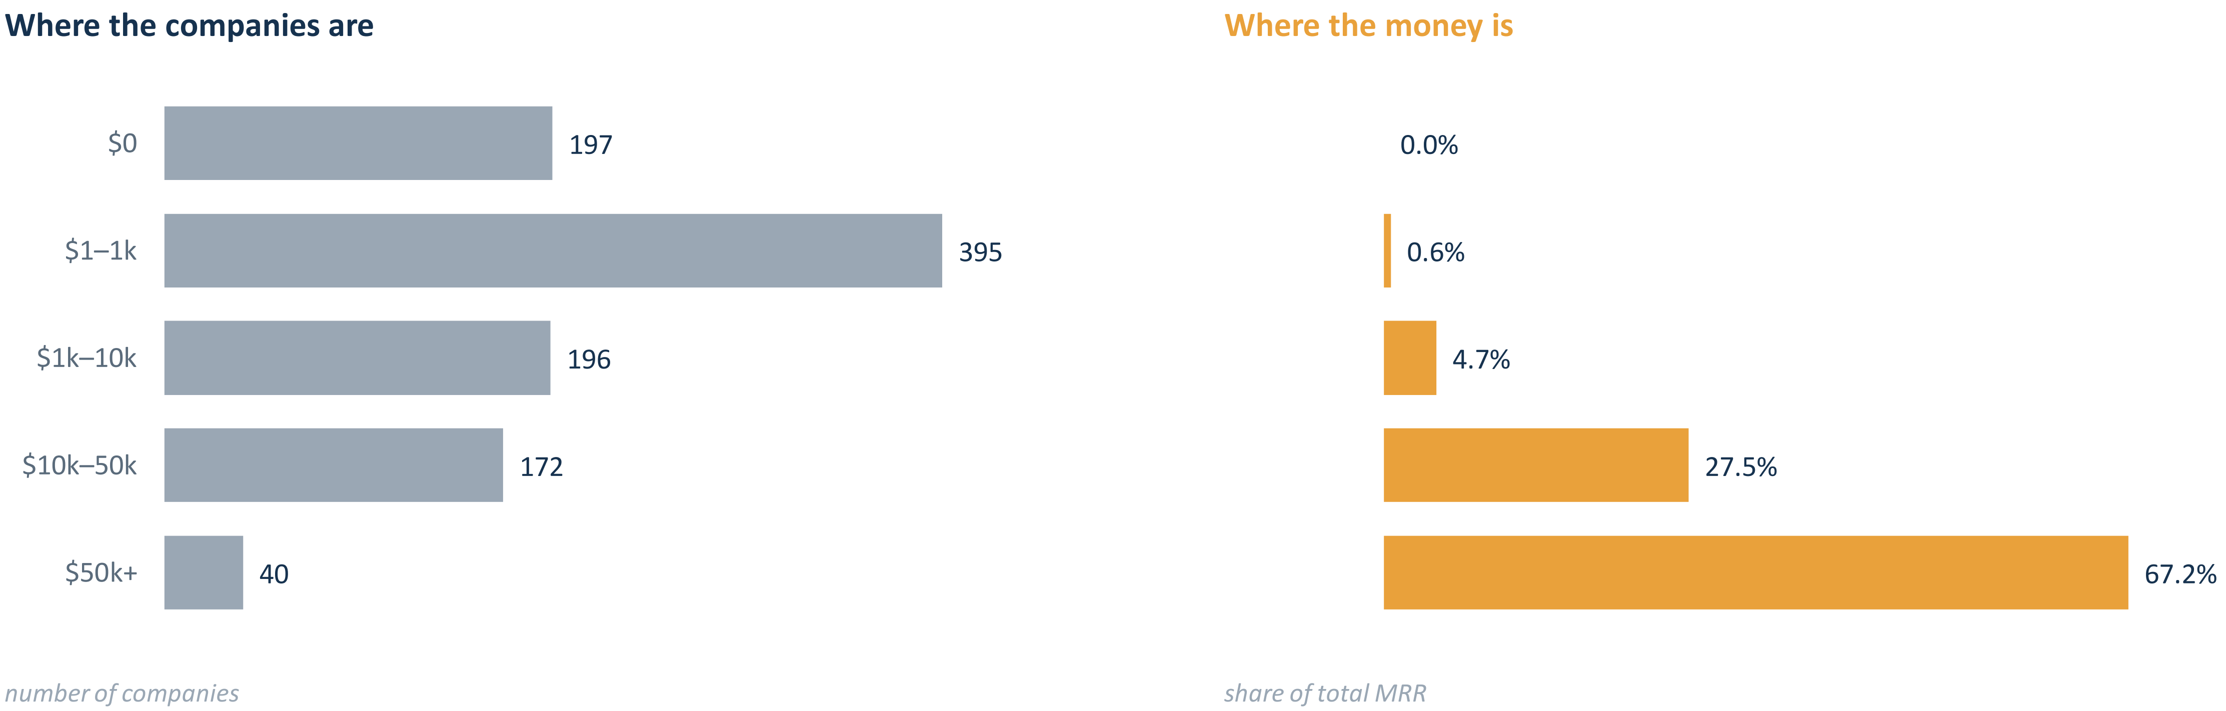
26.5% held by the single largest company, on its own

82% of all MRR held by the top 100 companies

18% left for the other 900 companies to share

Six in ten companies earn under $1,000 a month

Median MRR across all 1,000 companies: $282



212 companies — 21% of the market — hold 95% of the revenue.

THE THRESHOLD EFFECT

What separates the 21% from everyone else

Four differences — and only one of them is about the product

	ABOVE $10K MRR · n=212	BELOW $10K MRR · n=788
Median domain authority	35	6
Median revenue per subscriber	$42 / mo	$19 / mo
Median paying subscribers	555	12
Share of total MRR	95%	5%

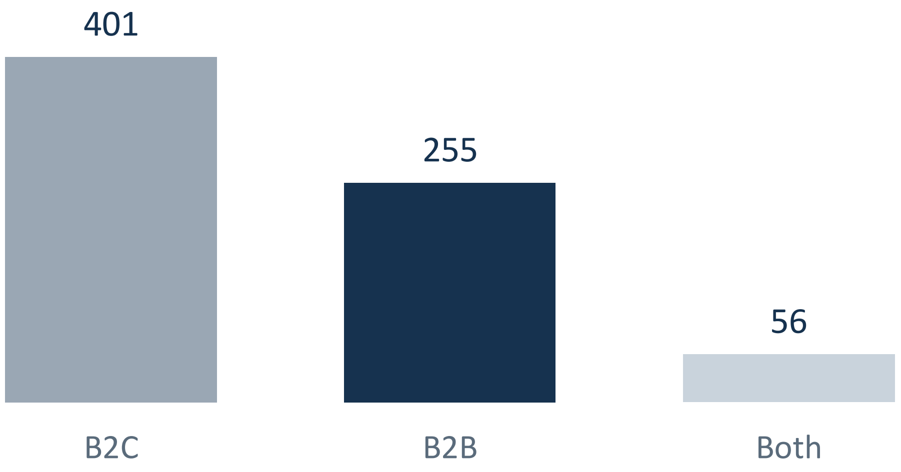
Reach more people through a channel you own — then charge each of them more.

MARKET MODEL

B2C wins on volume. B2B wins on economics.

B2B is 36% of profiled companies but 25% of all MRR — at 5× the revenue per customer

Companies by model



Median revenue per subscriber

B2B	$49
Both	$17
B2C	$9

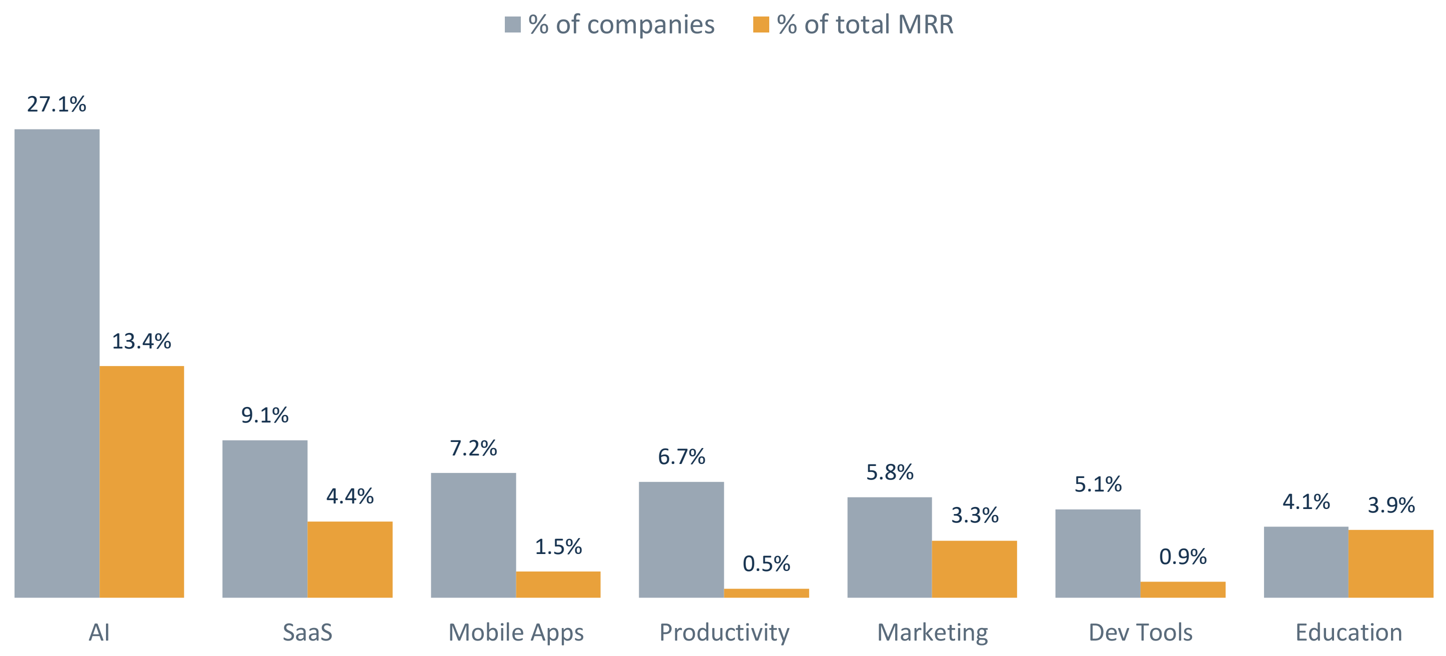
per subscriber, per month

A B2C business needs five customers to equal one B2B customer — five times the acquisition cost, support load and churn exposure.

CATEGORY CONCENTRATION

The most crowded category is not the most profitable one

Share of companies vs. share of revenue, leading categories



197 AI companies — the largest category by count, 27% of everything categorized

13% of total MRR, against that 27% of companies

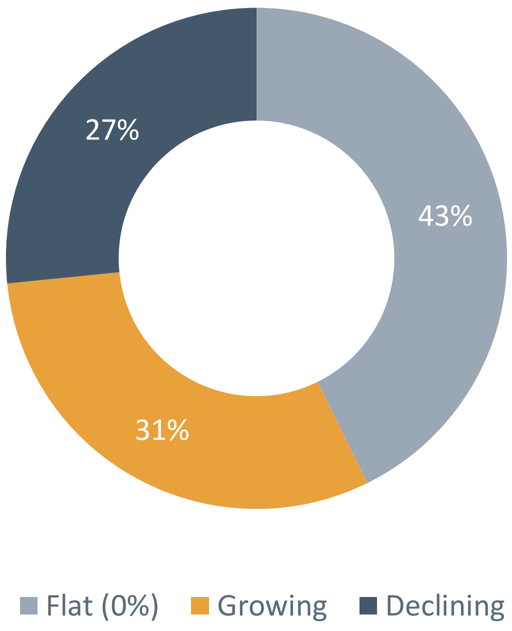
$446 median AI monthly revenue, versus $277 for everything else

The category's concentration of attention is running ahead of its concentration of revenue.

GROWTH

Flat is the most common outcome — including at the top

Month-over-month change in MRR, n=893 companies reporting



Median month-over-month MRR growth

0.0%

Scale does not fix it

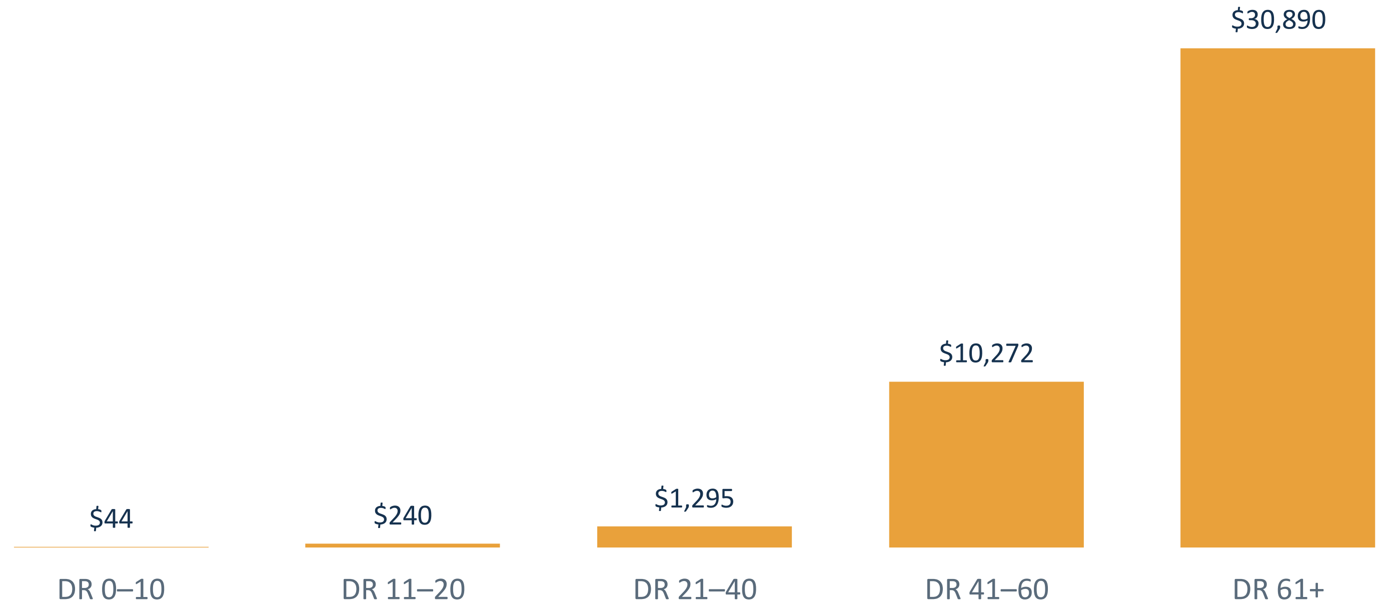
Among the 212 companies already above $10k MRR, median growth is also 0%.
74 of them shrank last month.

Reaching scale in this market is not the same as compounding. Underwrite cash generation, not growth.

THE STRONGEST SIGNAL

Search visibility tracks revenue. Social following barely does.

Median MRR by domain authority band



median monthly recurring revenue per band · correlations measured log-log

Correlation with revenue

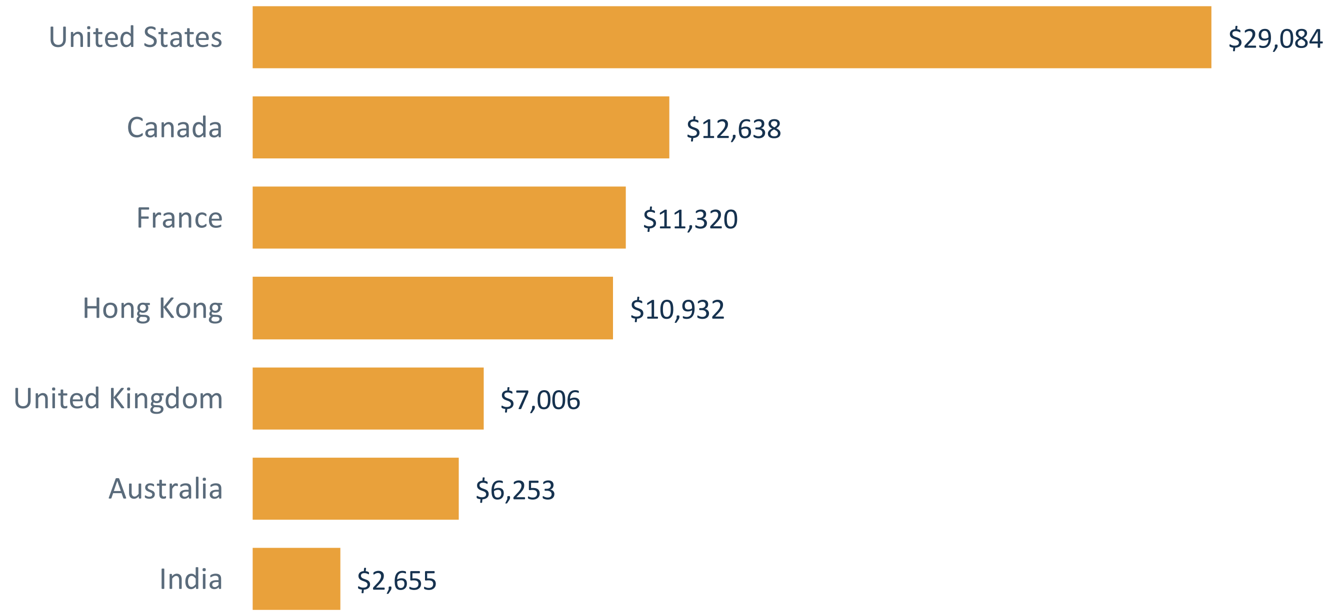
0.47	Domain authority
0.18	X / Twitter followers

Owned, compounding, searchable distribution tracks with durable revenue. Rented audience attention does not.

GEOGRAPHY

The US is a quarter of the companies and over half the revenue

Average MRR per company, markets with 15+ companies



258 US companies — 26% of the dataset, 56% of all revenue

79 companies in France — the second-largest population here

$6 median MRR in India, from 59 companies: high formation, near-zero monetisation

Builder density is not market size. Talent and cheap targets sit outside the US — revenue does not.

One in four of these companies is currently for sale

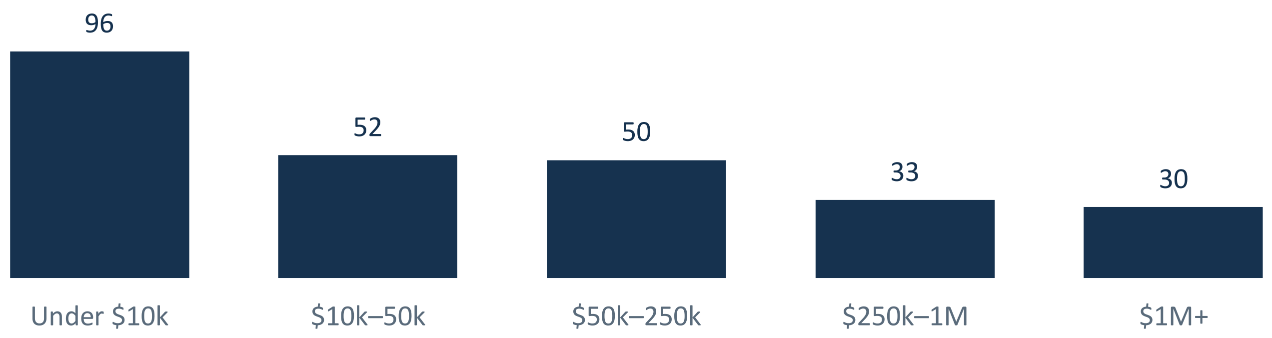
262 listings · $86.8M combined asking value · median implied multiple 3.5× trailing revenue

262
companies listed for sale

$86.8M
combined asking value

65
listings above $10k MRR

3.5×
median trailing revenue multiple



asking price distribution — median $35,000

Two cautions

- AI is the most-listed category (54) — founders exiting a crowded space, not a bargain.
- 37 listings have zero revenue: asset sales dressed as business sales.

IN CLOSING

Four conclusions, three actions

WHAT THE DATA SAYS

1. **The market is a power law, not a distribution.**

   21% of companies hold 95% of revenue. Averages mislead.

2. **Distribution is the differentiator.**

   Search visibility predicts revenue; audience size doesn't.

3. **Scale doesn't guarantee growth.**

   Median growth is 0%, even above $10k MRR.

4. **AI is crowded, not yet lucrative.**

   40% of companies, 25% of revenue.

WHAT WE SHOULD DO

Weight owned distribution over audience-building.

Treat domain authority as a leading indicator in our own reporting.

Screen the 65 revenue-generating listings.

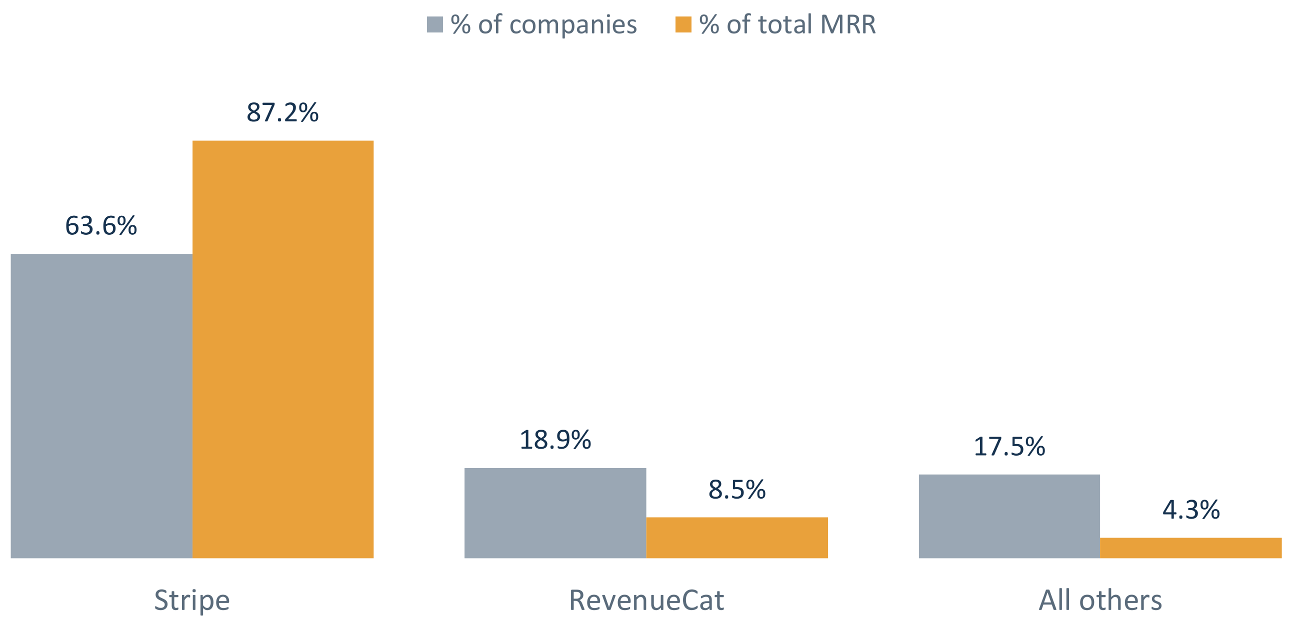
Prioritise B2B assets with domain authority above 40.

Underwrite on cash generation, not growth.

Require company-specific evidence; the base rate is zero.

Next step: a shortlist from that acquisition screen, back to this group in 30 days.

Stripe carries two-thirds of the companies and nearly nine-tenths of the revenue



What this tells us

- Mobile-first businesses on RevenueCat are numerous but small — consistent with the low consumer ARPU on slide 6.
- Stripe's dominance among high-revenue companies is near-total.
- Newer processors — Polar, Paddle, Lemon Squeezy, Dodo, Whop — hold 17% of companies but 4% of revenue.

How to read this data

Flag these before anyone quotes a figure externally

1	**Verified, but self-selected**	Companies opt in by connecting a payment processor. This is a population of founders willing to disclose revenue — not a random sample of startups.
2	**Incomplete segment fields**	Country missing for 24% of records, category for 27%, audience type for 29%. Segment cuts are directional. Several of the largest companies are unlabelled 'Stealth' records.
3	**Traffic data is thin**	Visitor counts exist for only 178 of 1,000 companies. Revenue-per-visitor is not reliable at market level and was excluded from this deck.
4	**Growth rates are volatile**	Month-over-month figures range from −100% to +12,983%. Medians are used throughout; means are not meaningful on this variable.
5	**Point-in-time snapshot**	Frozen 30 July 2026. No time series — all trend statements are single-month changes, not trajectories.

Top 10 companies by monthly recurring revenue

Company	Country	Category	Audience	MRR	Trailing 12m
Stan	US	Creator commerce	—	$3,569,654	$25.0M
(Stealth)	—	—	—	$747,069	$0.4M
GojiberryAI	US	AI	B2B	$494,668	$1.5M
(Stealth)	—	—	—	$364,101	$4.9M
Rezi	US	AI	B2C	$259,701	$3.0M
Kibu	US	Education	B2B	$234,319	$1.9M
Cometly	US	Analytics	B2B	$207,616	$2.3M
1Lookup	US	SaaS	B2B	$207,064	$3.1M
(Stealth)	FR	—	—	$191,268	$1.1M
Brand On Demand	US	E-comm	B2B	$187,459	$10.6M

1Lookup ($207k MRR) is listed for sale — a useful anchor for the acquisition discussion on slide 11.
