Of listings declining, 30-day revenue

2.3x
Median asking multiple (range 0-327x)

$r \approx 0.36$
Multiple-to-growth correlation — weak

INVESTMENT THESIS

What an investor should conclude

Chase concentration, not the average

Value sits with a small set of scaled winners. Screen for businesses already breaking from the $282 median MRR pack — the middle of this market is not investable at scale.

Multiple is not a signal — trend is

Price and growth correlate weakly (r≈0.36). Rank targets by their own 30/90-day MRR trend first; use multiple only to negotiate, never to screen.

Dev Tools, Analytics, SaaS price cheapest and grow fastest

These three categories combine below-average multiples with above-average median growth — the strongest risk-adjusted entry points in this sample (detail on slide 6).

Avoid category-level bets on Marketing, Education, Fintech

Highest multiples in the market sit on categories with the weakest median growth and highest decline rates — priced for a turnaround the data doesn't show.

REVENUE CONCENTRATION

Where the winners already are

59.3%

of 12-month revenue sits with the top 20 of 1,000 listings — the concentration an investor is actually competing for

Startup	Category	12-mo revenue
Stan	Creator commerce	$25.0M
Brand On Demand, Inc.	E-comm	$10.6M
Stack Influence	Marketing	$10.5M
Stealth Company (anon.)	—	$4.9M
Comp AI	AI	$3.9M
1Lookup	SaaS	$3.1M
Rezi	AI	$3.0M
Cometly	Analytics	$2.3M
Kibu	Education	$1.9M

INDUSTRY BREAKDOWN

All 13 categories, ranked by revenue

Category	Listings	12-mo rev.	Med. growth 30d	% declining	Med. multiple
AI	197	$18.4M	0%	40%	3.15x
Marketing	42	$14.6M	+1%	41%	3.70x
E-comm	19	$12.0M	0%	26%	2.05x
SaaS	66	$6.6M	0%	30%	1.20x
Education	30	$5.5M	0%	40%	3.95x
Analytics	19	$3.7M	+5%	21%	3.40x
Content Creation	36	$1.9M	0%	44%	2.90x
Mobile Apps	52	$1.7M	0%	50%	2.30x
Dev Tools	37	$1.2M	+6%	24%	1.35x
Health & Fitness	34	$1.1M	0%	27%	2.65x
Social Media	18	$1.5M	0%	33%	1.50x
Productivity	49	$0.7M	0%	31%	2.30x
Fintech	16	$0.7M	-7%	50%	3.40x

INDUSTRY VERDICTS

Sorting the 13 categories into a call

INVEST

Dev Tools

Cheapest multiple (1.35x) + fastest median growth (+6%) + lowest decline rate (24%).

Analytics

Best growth in market (+5%) and lowest share declining (21%), despite a fuller 3.40x price.

SaaS

Cheapest multiple overall (1.20x) on a large, established base of 66 listings.

SELECTIVE

AI

Largest pool (197) and most revenue, but flat growth and 40% declining — cherry-pick, don't buy the category.

E-comm

Strong revenue base, reasonable 2.05x pricing, but growth flat — verify durability per listing.

Other selective picks

Mobile, Health & Fitness, Productivity, Social — mixed signal; screen individually, not by category.

AVOID

Education

Priciest multiple in the market (3.95x) despite flat growth and 40% declining.

Marketing

Second-priciest (3.70x) with 41% of listings declining.

Fintech & Content Creation

Worst growth (Fintech, -7%) and the two highest decline rates in the market (44-50%), still priced at 2.9-3.4x.

GROWTH & PRICING SIGNAL

The market is bimodal, and price barely tracks it

0%
Median 30-day growth

33.7%
Declining

20.1%
Growing >20%/mo

r ≈ 0.36
Multiple vs. growth correlation

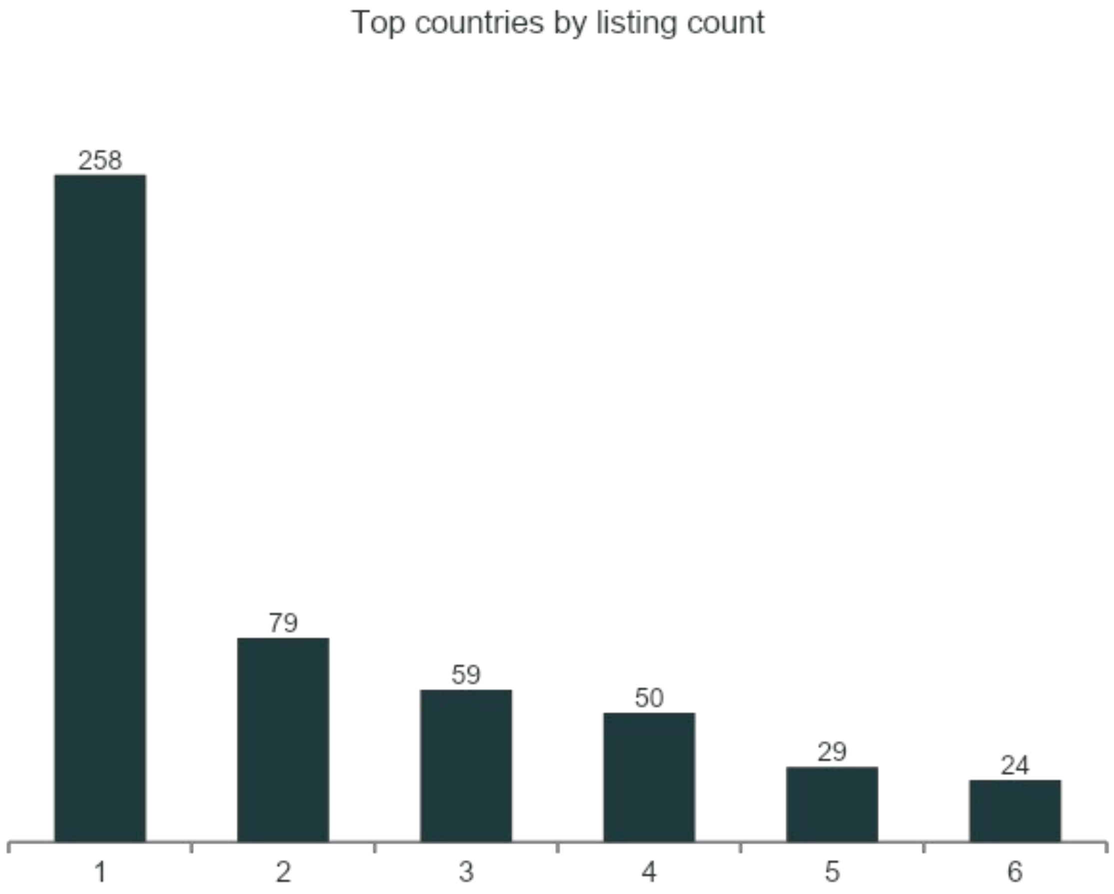
Read

- No "typical" trajectory — a third of the market shrinks while a fifth grows fast; category averages hide this.
- Mean growth (+42%) is an artifact of rare spikes up to 7,900% MoM — never anchor on it.
- Multiple correlates only loosely with growth — sellers price on some logic, but not tightly enough to trust in isolation.

Act

- Screen every target on its own 30-day AND 3-month trend — never a single-month number.
- Use multiple to negotiate, not to shortlist.
- Treat X followers (r≈0.03) and domain rating (r≈0.29) as noise, not diligence signal.

Founder base and revenue verification



636 / 189

Stripe (web SaaS) vs. RevenueCat (mobile apps) listings

Diligence implications

- US-heavy (34% of known-country listings), then France and India — check entity structure, tax residency, IP ownership.
- Country unlabeled on 24% of rows — don't assume US-only.
- Payment provider is a fast first filter: Stripe-only signals web SaaS/e-comm; RevenueCat signals mobile-subscription economics.

THE FOR-SALE POOL

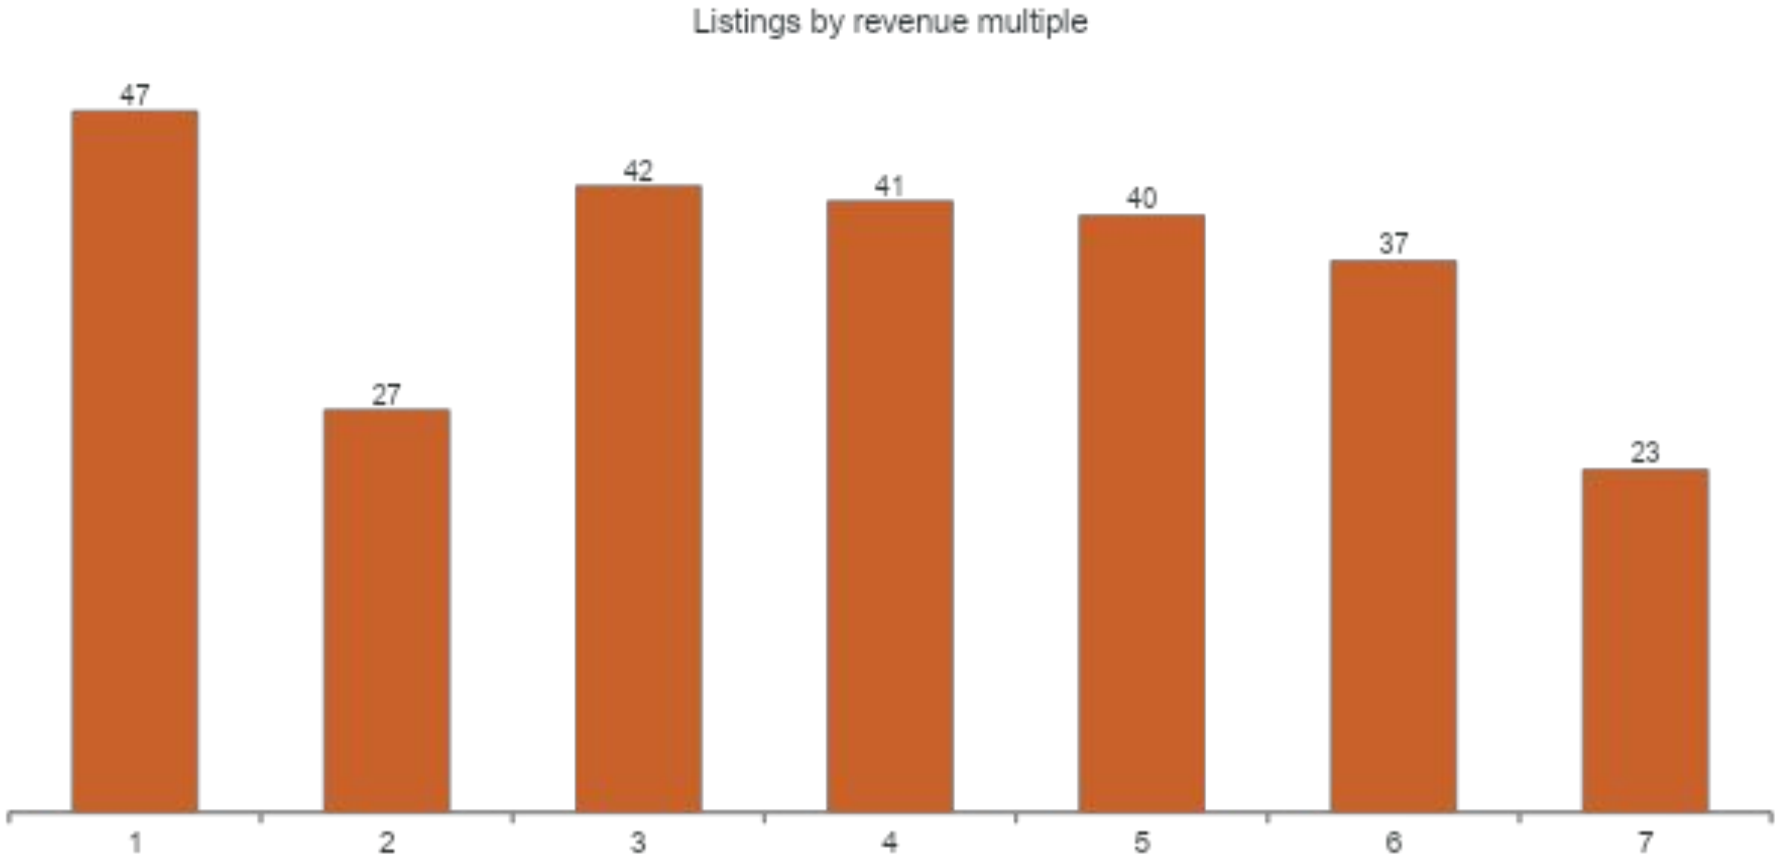
262 live listings — where the deployable capital goes

26.2%

of the market is for sale

$35K

Median ask (mean $332K)



Pattern: undervalued growers

Screen: MRR growing >10% MoM + priced under ~2x annualized MRR

Example	MRR trend	Multiple
Kickly – Pronos IA	High growth	**0.7x**
Leadbomb	High growth	**0.6x**
Linkeddit	High growth	**0.2x**
SetSmart	High growth	**0.8x**
Delta Sports	High growth	**1.9x**
textbee	High growth	**1.5x**

Why chase this

- Growth priced under 2x annual MRR usually means a seller optimizing for a fast exit, not maximum price.
- Best odds of a quick, well-priced acquisition — confirm growth is durable, not a one-month spike, before offering.

RISKS

Pattern: overpriced decliners

Warning: MRR shrinking >10% MoM + still priced above 3x revenue

Example	MRR trend	Multiple
ChurchCalls.ai	Declining	**21.8x**
Blabla	Declining	**17.1x**
Yakkr Growth	Declining	**16.9x**
Heard – Journal That Talks Back	Declining	**10.4x**
VIFIX	Declining	**9.9x**
BENO ONE	Declining	**8.7x**

What to probe

- Price assumes a turnaround the data doesn't show — ask what caused the decline and whether a funded fix exists.
- If not: treat the listed multiple as a starting point for negotiation, not a fair price.

WHERE TO INVEST

The recommended allocation

1

Dev Tools & Analytics

Primary focus

Cheapest-to-growth ratio in the market: 1.35x/3.40x multiples against +6%/+5% median growth and the lowest decline rates (24%/21%). Best risk-adjusted entry point in this sample.

2

SaaS, cherry-picked

Value layer

Cheapest overall multiple (1.20x) on a large, established base — target listings above the $282 median MRR with a clean 90-day trend.

3

AI & E-comm, selective only

Opportunistic

Scale and revenue are real, but category-level growth is flat — buy specific outliers on trend, never the category average.

4

Marketing, Education, Fintech

Pass at category level

Priced richest (3.4-4.0x) while showing the weakest growth and highest decline rates — the data doesn't support the multiple.

Read from this sample's category-level metrics, not a substitute for listing-by-listing diligence or financial/legal advice.

RECOMMENDED ACTIONS

The four moves, in order

1. **Build the shortlist from slide 6**

   Start in Dev Tools, Analytics, and SaaS. Pull every for-sale listing in those categories above the $282 median MRR.

2. **Rank by trend, not multiple**

   Sort the shortlist by 30-day + 3-month MRR trend. Drop anything matching the red-flag pattern on slide 11.

3. **Verify before offering**

   Confirm revenue directly against the seller's payment processor; reconcile MRR vs. trailing revenue for every finalist.

4. **Re-pull before committing capital**

   This is a frozen snapshot (30 Jul 2026) — refresh price and growth data immediately before any offer.

CAVEATS

Before relying on any single figure

Data gaps

- 129 listings (13%) are anonymized “Stealth Company” records — usable for market sizing, not specific diligence.
- Category, country, pricing model, and value proposition are missing on 24-34% of rows — mostly optional fields, not a quality signal.
- Annualized MRR and trailing revenue don't always reconcile per listing — check both before trusting a stated multiple.

Source & scope

- TrustMRR: a marketplace verifying revenue via direct payment-processor connections (Stripe, RevenueCat, and others) — not self-reported screenshots.
- This deck is a single frozen snapshot (30 Jul 2026), not a live feed.
- A market sample for screening, not a certified valuation or financial/legal opinion on any listing.
