

TRUSTMRR • MARKETPLACE INTELLIGENCE

What 1,000 Listings Reveal About Building a Micro-SaaS

A data-driven read of the TrustMRR dataset — revenue patterns, what separates top earners, and a launch checklist for listing your own product.

1,000 startup listings • 65 countries • 29 categories • Frozen 30 Jul 2026

A snapshot of the TrustMRR marketplace

1,000 startups listed on TrustMRR, captured in a single frozen snapshot. Here's the scale we're working with before we dig into what actually drives revenue.

1,000

startup listings analyzed

\$15.6M

combined 30-day revenue across all listings

\$13.5M

combined monthly recurring revenue (MRR)

65

countries represented

29

product categories

26%

of listings are currently for sale

This is a winner-take-most market

Average MRR looks healthy — until you compare it to the typical listing. The gap between the two tells the real story.

\$13,472

Average MRR per listing

\$282

Median MRR per listing — the typical startup

47.8×

the average listing earns 47.8× more than the median listing

Top 10% of listings (100 startups) capture 81.8% of all MRR in the dataset. A small set of breakout products — not the median business — defines this market.

The most crowded category isn't the most profitable one

AI has 4× more listings than the next category — but its typical business earns far less than smaller, more focused categories.

B2B listings out-earn B2C by a wide margin

Fewer B2B businesses are listed, but each one is worth substantially more — both in recurring revenue and in how well it converts traffic.

Domain authority tracks revenue almost perfectly

Group listings by domain rating (0–100, a proxy for SEO authority) and median MRR climbs in lockstep — a 3,370× range from the weakest to the strongest domains.

Subscribers predict revenue. Followers don't.

Two “growth” metrics, two very different relationships with money in the bank.

0.91

correlation: active subscriptions ↔ MRR

Near-perfect. Subscriber count is the single strongest predictor of recurring revenue in this dataset.

0.02

correlation: X (Twitter) followers ↔ 30-day revenue

Essentially zero. A big social following shows up in almost every founder's bio here — but it doesn't show up in the revenue line.

OBSERVATION 06

Free tiers correlate with lower revenue, not more users converted

Listings whose pricing model has no free or freemium option show meaningfully higher MRR than those that lead with “free.”

\$554

Median MRR — paid-only pricing
(654 listings)

\$159

Median MRR — includes a free / freemium tier
(346 listings)

3.5× higher median MRR for listings that charge from day one, versus those offering a free or freemium tier.

Stripe is the default — and the median performer

64% of all listings run on Stripe. Niche billing tools show lower typical MRR, likely reflecting earlier-stage or hobby projects rather than the tool itself.

63.6%
of listings (636 / 1,000) use Stripe

Revenue is heavily concentrated in a handful of markets

Of listings with a known country, the US alone generates almost two-thirds of all 30-day revenue in the dataset.

63.1%

of total 30-day revenue comes from US-based listings alone

Top 5 countries by 30-day revenue (\$M)

A quarter of this marketplace is already for sale

TrustMRR isn't just a place to launch — it's a live exit market, with real asking prices attached to real MRR.

26.2%

of all 1,000 listings are marked “on sale” (262 startups)

\$35,000

median asking price among listed-for-sale startups

\$10.0M

highest asking price in the dataset (1Lookup, \$207K MRR)

2.3×

median self-reported revenue multiple (highly variable by listing)

A few stories worth knowing

Behind the aggregate numbers, individual listings tell sharper stories.

Stan — the market leader

\$3.57M MRR and the dataset's highest domain rating (89/100). The clearest case of category-defining scale.

An anonymous breakout

A “Stealth Company” grew MRR +12,983% in 30 days, from roughly \$1K to \$135,899 — the fastest mover in the dataset.

GojiberryAI

\$494,668 MRR, the largest fully-named AI-category listing, and #3 overall by revenue.

Privacy is common

13% of founders (130 of 1,000) list under “Stealth Company” or “Hidden Business” rather than a real name.

What you need before listing on TrustMRR

Seven things the data says separate a well-positioned launch from a median one.

1

A focused category, not the crowded one

Education, Marketing, Content Creation and Sales all out-earn AI on a per-listing basis. Pick where you can lead, not where everyone else is.

2

A B2B or mixed buyer, if you can

B2B listings post 5.7× the median MRR of B2C, and monetize traffic 3.5× better per visitor.

3

A subscription model from day one

Active subscriber count is the strongest single predictor of MRR ($r = 0.91$) in this dataset — stronger than any other visible field.

4

Real pricing, not an extended free tier

Paid-only listings show 3.5× the median MRR of listings that lead with a free or freemium plan.

5

Domain authority built in early

Median MRR rises from \$9 to \$30,890 moving from the lowest to highest domain-rating band — SEO groundwork compounds.

6

Stripe (or equivalent) wired up

64% of listings already run on Stripe — it's the default buyers and integrations expect.

7

A north-star metric that isn't followers

Social following shows almost no relationship with revenue ($r = 0.02$). Track subscribers and MRR instead.

What this dataset can—and can't—tell you

Financial fields are complete for every listing. Enrichment fields are not — that shapes how confidently each observation should be read.

100%

complete: revenue, MRR, subscriptions, payment provider, on-sale status

~28%–36%

complete: category, country, domain rating, pricing model, audience type

<15%

complete: X followers, visitor counts, growth-rate fields

Implication: category-, country-, and pricing-based comparisons in this deck reflect the ~30–70% of listings where that field was reported, not the full 1,000 — directionally reliable, not exhaustive

IN SUMMARY

A small share of focused, subscription-first, B2B-leaning products with strong domains capture almost all the value on TrustMRR.

Top 10% hold 81.8% of MRR

B2B earns 5.7× B2C

Subscribers, not followers, predict MRR ($r=0.91$)

Domain authority: \$9 → \$30,890 median MRR

26% of listings are already for sale
