Read this before you trust any chart that follows

No time dimension.

One frozen snapshot — momentum is shown as growth-rate distributions, never as a trend over time.

Self-reported and self-selected.

Companies opt in and choose which fields to fill. Every breakdown is a cut of the disclosed subset, not the market.

Disclosure falls as revenue rises.

274 listings disclose no category at all — and those listings hold 43.8% of all revenue. 72 are deliberately anonymised.

\$133.8M is not a market. It's ten companies.

The top 10 companies hold 50.6% of all revenue. The top 100 hold 84.7%.

stan

\$25.0M — 18.7% of the entire dataset on its own.

Concentration by geography

8 of these 10 are US-based.

Disclosure gap

3 of the 10 do not disclose a category at all.

Six in ten companies split 1.5% of the money

MRR is almost perfectly log-uniform — roughly 20% of companies sit in each decade band — but revenue is not.

**59%**

of companies earn under \$1k MRR

1.5%

of total revenue is what they collectively hold

16

companies above \$100k MRR hold 45% of revenue

109

companies reported zero revenue over 12 months

Everyone builds AI. The money is elsewhere.

AI is 19.7% of companies but 13.8% of revenue. Marketing is 4.2% of companies and 10.9% of revenue.

Most crowded

AI — 197 companies, the single largest category, earning below its share.

Best earners

Marketing (42) and E-comm (19) both earn several times their headcount.

Bubble size

Number of companies. 18 categories with 10 or more shown. 274 listings disclose no category — and hold 44% of revenue.

A 51× spread from best to worst category

Median MRR by category. Only the 18 categories with 10 or more companies are shown — n is printed against every bar.

Two-thirds of the money is in one country

The US is 26% of companies and 63.6% of revenue. Company count and monetisation are close to unrelated everywhere else.

The US takes two-thirds of the money

Volume is not value

63.6%

of all revenue is US-based, from 258 of 1,000 companies

\$6

median MRR in India — 59 companies, 0.9% of revenue

243

listings disclose no country at all

B2B earns 5.7× more from the same customers

Median B2B and B2C companies have a near-identical customer count — 16 versus 19 — and a completely different revenue outcome.

Why: price, not scale. Median ARPU is \$19.50/month across all 789 companies with paying customers — but \$49.00 for B2B against B2C's \$9.34.

Payment infrastructure
Stripe carries 89.7% of all revenue from 636 of 1,000 companies.

Stripe n=636	\$663
RevenueCat n=189	\$237
Dodo Payments n=50	\$2
Polar n=36	\$0
Lemon Squeezy n=25	\$76

median MRR by provider

Growth is a coin flip. The cohort is young.

344 companies grew last month, 337 shrank, 305 were exactly flat.

35 / 34

percent growing versus shrinking — effectively even odds

30

companies posted -100%: revenue went to zero this month

63%

of companies earned effectively all their revenue in the last 12 months — this is a young cohort

A quarter of the dataset is for sale

262 of 1,000 listings are on the market at a median asking price of \$35,000 and a median 2.3× revenue multiple.

**26%**

of all listings are for sale (262 companies)

\$35,000

median ask · quartiles \$5,000 to \$220,000

2.3×

median revenue multiple · max observed 327×

The pricing anomaly

B2B earns 5.7× the median MRR of B2C, yet lists at 2.35× against B2C's 2.30×. The market pays for revenue and ignores its source.

Five things this dataset actually says

01

\$133.8M describes ten companies, not a thousand.

The top 10 hold 50.6% of revenue and the mean is 44× the median. Read medians or be misled.

02

The crowd and the money are in different categories.

AI holds 19.7% of companies for 13.8% of revenue; Marketing holds 4.2% for 10.9%.

03

B2B is a pricing decision, not a scale decision.

Median B2B and B2C companies serve 16 and 19 customers. B2B earns 5.7× more by charging more per customer.

04

Half of these companies are not growing.

344 up, 337 down, 305 flat — and 30 went to zero this month.

05

So 26% of them are for sale.

Median ask \$35,000 at 2.3× revenue — with no measurable premium for B2B.
