

TRUSTMRR DATASET • 1,000 STARTUPS

# Revenue, growth & monetization insights

A structured read of the dataset — what drives revenue, which categories monetize best, and what to check before launching a new app.

**1,000**

Companies

**29**

Data fields

**\$13.5M**

Total MRR

**64**

Countries

# 29 columns, five stories

Each company is one row. The fields fall into five natural groups — identity, money, growth & audience, product context, and sale status.

| Identity                                          | Revenue & MRR                              | Traffic & audience                       | Product context                          | Sale listing                                   |
|---------------------------------------------------|--------------------------------------------|------------------------------------------|------------------------------------------|------------------------------------------------|
| record_id, startup_name,<br>trustmrr_url, website | revenue_30d/3m/12m/all-<br>time_usd        | visitors_30d,<br>revenue_per_visitor_usd | value_proposition,<br>problem_solved     | domain, domain_rating                          |
| country, x_followers                              | mrr_usd, growth %,<br>active_subscriptions | audience_type, target_persona            | pricing_model, category,<br>markets_json | on_sale, asking_price_usd,<br>revenue_multiple |

**Completeness note:** core financials (revenue, MRR, subscriptions) are 100% populated. Context fields — category, pricing\_model, audience\_type — are 65-75% populated because TrustMRR only captured what the listing page exposed; these gaps are real, not corrupted data.

# What actually predicts MRR

Pearson correlation of each numeric field against mrr\_usd, across all 1,000 rows.

- **Subscriptions & revenue move together**

0.91-0.87 correlation - expected, but confirms the data is internally consistent.

- **Social proof barely matters**

X follower count correlates just 0.02 with MRR. Audience size does not equal revenue.

- **Traffic alone doesn't convert**

Visitor volume correlates only 0.19 - conversion quality matters more than reach.

- **Domain authority is a weak signal**

SEO strength (0.21) helps a little, but isn't a reliable revenue predictor.

# Revenue is extremely concentrated

Total MRR across the dataset is \$13.47M. Almost all of it sits with a small number of companies.

**Implication:** averages (mean MRR) are misleading for this dataset - a handful of outliers like Stan (\$3.57M MRR) and a few stealth companies pull the mean far above what a typical company earns. Median is used throughout the rest of this deck for that reason.

# Category monetization pivot

Categories with at least 8 companies, ranked by median MRR. ARPU = MRR per active subscription. Multiple = median asking-price / revenue multiple among on-sale listings.

| Category         | N   | Median MRR | ARPU    | % B2B | Exit multiple |
|------------------|-----|------------|---------|-------|---------------|
| Education        | 30  | \$2,142    | \$11.8  | 10%   | 4.0x          |
| Marketing        | 42  | \$1,586    | \$53.8  | 79%   | 3.7x          |
| Analytics        | 19  | \$1,294    | \$30.5  | 63%   | 3.4x          |
| Content Creation | 36  | \$1,254    | \$20.7  | 28%   | 2.9x          |
| Sales            | 13  | \$1,036    | \$102.9 | 92%   | 6.4x          |
| Social Media     | 18  | \$912      | \$9.5   | 11%   | 1.5x          |
| Fintech          | 16  | \$500      | \$20.0  | 13%   | 3.4x          |
| AI               | 197 | \$446      | \$24.3  | 38%   | 3.2x          |
| SaaS (general)   | 66  | \$303      | \$39.0  | 58%   | 1.2x          |
| Mobile Apps      | 52  | \$223      | \$5.1   | 2%    | 2.3x          |
| Dev Tools        | 37  | \$185      | \$14.8  | 65%   | 1.4x          |
| Productivity     | 49  | \$42       | \$4.8   | 8%    | 2.3x          |

# Three growth clusters among top-half earners

Companies at or above median MRR, split by 30-day MRR growth rate.

## Rockets 84 companies

AI tools dominate this group - HotelHero.ai, LLM Gateway, MimikFlow. Fast growth, but often small absolute revenue still.

## Cash cows 249 companies

The healthy majority: steady, mature revenue without wild swings - the profile most acquirers actually want.

## Declining 53 companies

High revenue today but shrinking fast. Worth flagging for churn or competitive-pressure review before betting on the number.

# The US drives 56% of all MRR

64 countries represented; 243 rows have no recorded country. Ranked by company count.

| Country        | Companies | Median MRR | Share of total MRR |
|----------------|-----------|------------|--------------------|
| United States  | 258       | \$1,263    | 55.7%              |
| France         | 79        | \$435      | 6.6%               |
| India          | 59        | \$6        | 1.2%               |
| United Kingdom | 50        | \$153      | 2.6%               |
| Canada         | 29        | \$919      | 2.7%               |
| Singapore      | 9         | \$2,126    | 1.0%               |

- **US = quality + quantity**  
  
Highest count and highest median MRR of any large market.
- **France, a strong #2**  
  
6.6% of global MRR from a fraction of the company count.
- **Volume does not equal revenue: India**  
  
3rd-highest company count, but median MRR is just \$6 - largely early-stage/hobby projects.
- **Small but mighty: Singapore, UAE, Estonia**  
  
Tiny company counts, but median MRR above the US benchmark.

# Which gateway do successful listings use?

payment\_provider values as recorded on each listing. Single-provider rows only.

| Gateway       | Companies | Median MRR | Best fit                                 |
|---------------|-----------|------------|------------------------------------------|
| Stripe        | 636       | \$663      | Direct web billing, broad default        |
| RevenueCat    | 189       | \$237      | Mobile app subscriptions (iOS/Android)   |
| Superwall     | 17        | \$5,465    | Paywall-optimized mobile subscriptions   |
| Dodo Payments | 50        | \$2        | Emerging, mostly early-stage listings    |
| Paddle        | 16        | \$146      | Merchant-of-record, handles global tax   |
| Polar         | 36        | \$0        | Developer-first, very early-stage cohort |

**Reading it right:** Superwall's high median MRR reflects its niche (paid mobile-subscription apps), not gateway superiority - pick based on your distribution channel, not this table alone.

# Before you build: seven checks

If you're starting something new, run it against these dataset-backed checks first.

1

## B2B vs. B2C

B2B median MRR is 5.7x higher than B2C (\$1,036 vs \$181). Lean B2B if the idea allows it.

3

## Gateway matches channel

Stripe for web-first, RevenueCat/Superwall for mobile subscriptions - not one-size-fits-all.

5

## Revenue-per-visitor, early

SaaS converts at \$3.57/visitor median; AI apps convert at just \$0.36 - traffic isn't revenue.

7

## Geography realism

Volume-heavy markets (e.g. India) skew early-stage; smaller markets (Singapore, UAE) can be higher quality.

2

## Category crowding

AI has the most entrants (197) but middling median monetization - a hard category to stand out in.

4

## Pricing model clarity

615 unique free-text pricing structures in this dataset - most listings are messy. Simple tiers stand out.

6

## Growth trend, not snapshot

53 high-revenue companies were shrinking >10%/month - check the trajectory, not just today's number.

# Four things worth remembering

## Revenue is winner-take-most

82% of MRR sits with the top 10% of companies. Design for that reality - don't plan around the average.

## Sales, Marketing & Analytics monetize best

Highest ARPU, highest B2B share, and the richest exit multiples of any well-populated category.

## Followers and traffic are weak signals

X followers ( $r=0.02$ ) and visitor count ( $r=0.19$ ) barely predict revenue - conversion quality is what matters.

## Pick infrastructure to match distribution

Stripe for web, RevenueCat/Superwall for mobile - and watch growth trend, not just current MRR.
