

TrustMRR Dataset: Segmentation Playbook

Better segment cuts, sharper insights, and the operating action.

Output: segment-level revenue logic + CBO decisions on GTM, partnerships, retention and M&A.

1,000

companies analysed

\$15.6M

30-day revenue

\$13.5M

total MRR

13

slides incl. action plan

The data says: protect whales, scale proven segments, be disciplined on acquisitions

\$15.6M

30-day revenue pool

\$13.5M

MRR pool

48.0%

MRR from top 10

\$86.8M

on-sale asking value

262

companies for sale

1

Concentration risk

Top 10 companies contribute nearly half of MRR; a few accounts distort every average.

2

Category opportunity

AI is broadest; Analytics, Education, E-comm and Marketing show stronger revenue density.

3

GTM wedge

US + B2B + Stripe is the clearest monetisation combination.

4

M&A watchlist

262 companies are on sale, but multiples and data quality vary widely.

Use this sheet for revenue segmentation; do not overuse it for funnel/CAC claims

Reliable fields

Revenue, MRR, category, geography, payment provider and on-sale status are usable for business segmentation.

Weak fields

Visitors and revenue-per-visitor are mostly missing; CAC and conversion benchmarking would be speculative.

Operating implication

Use this as a revenue intelligence sheet now; collect retention, CAC, channel source and gross margin before budget allocation.

Action: Create a clean commercial data room before making CAC-heavy growth decisions.

Averages are misleading: MRR is driven by a small set of winners

Rank	Startup	Category	MRR
1	Stan	Unknown	\$3.57M
2	Stealth Company	Unknown	\$747K
3	GojiberryAI	AI	\$495K
4	Stealth Company	Unknown	\$364K
5	Rezi	AI	\$260K
6	Kibu	Education	\$234K
7	Cometly	Analytics	\$208K

Stan alone contributes 26.5% of total MRR. Segment decisions should use medians and cohort bands, not simple averages.

Action: Create separate operating cadences for whales, mid-market accounts and the low-MRR long tail.

Only 40 companies above \$50k MRR drive ~67% of the revenue base

Band	Cos.	MRR share	Median MRR
\$100k+	16	55.0%	\$199K
\$50k-\$99k	24	12.3%	\$64K
\$10k-\$49k	172	27.5%	\$20K
\$1k-\$9.9k	197	4.7%	\$2K
\$100-\$999	197	0.5%	\$261

The \$100k+ band has only 16 companies but more than half of MRR. The \$0 to sub-\$1k bands contain 591 companies but negligible MRR contribution.

Action: Prioritise sales capacity by revenue band; automate the low-MRR base instead of over-serving it.

AI is the broad market; Analytics/Marketing/Education are denser monetisation pockets

Category	Rows	Avg MRR	Median MRR
AI	197	\$9K	\$446
SaaS	66	\$9K	\$303
Education	30	\$17K	\$2K
Marketing	42	\$11K	\$2K
E-comm	19	\$21K	\$155
Analytics	19	\$19K	\$1K
Social Media	18	\$17K	\$912

AI has 197 rows and \$2.36M 30-day revenue, but median MRR is only \$446. Categories with fewer rows can have better revenue density.

Action: Run two GTM motions: AI for volume; Analytics/Marketing/Education/E-comm for higher monetisation experiments.

Best segment pockets appear when category and customer type are combined

Segment	Rows	Avg MRR	Median
AI-B2B	75	\$15K	\$1K
AI-B2C	88	\$6K	\$278
SaaS-B2B	38	\$11K	\$635
Marketing-B2B	33	\$11K	\$3K
Analytics-B2B	12	\$25K	\$3K
Education-B2C	25	\$10K	\$311
E-comm-B2B	8	\$30K	\$127

AI-B2B is the largest identifiable pocket. Analytics-B2B shows high average MRR; Education-B2B is very high average but only three rows, so treat as a signal, not proof.

Action: Build segment-specific playbooks instead of one category playbook: AI-B2B, AI-B2C, SaaS-B2B and Analytics-B2B behave differently.

The US is the core revenue market; India is volume-rich but lower monetisation

Stripe is the revenue backbone; RevenueCat marks the mobile subscription pocket

Action: Prioritise Stripe ecosystem GTM; use RevenueCat to target mobile-app and subscription-app companies.

Among classified businesses, B2B creates much higher revenue density

Audience	Companies	Total MRR	Avg MRR	ARPA/Sub
B2B	255	\$3.35M	\$13K	\$83
B2C	401	\$2.05M	\$5K	\$13
Both	56	\$338K	\$6K	\$23

B2B average MRR is 2.6× B2C. B2C has scale, but needs product-led acquisition and lower servicing cost.

Action: Route B2B to sales-led pods; manage B2C through pricing, onboarding, lifecycle and self-serve levers.

Social proof is not a revenue proxy in this dataset

Pearson correlation

0.024

x_followers vs revenue_30d_usd
complete pairs: 984

Signal	Use in CBO scorecard
Followers	Awareness only; weak revenue linkage
MRR	Core scale signal
MRR growth	Use with absolute MRR added
Domain rating	SEO/credibility proxy, not proof of monetisation
Named/anonymous	Diligence risk flag

Named companies are 87% of rows but anonymous companies hold 28.1% of MRR — anonymity should trigger diligence, not automatic rejection.

Action: Score opportunities on revenue quality and diligence confidence, not followers or hype.

There is enough supply for M&A, but the shortlist must be filtered hard

262

companies on sale

\$86.8M

combined asking price

3.0×

median stated multiple

Category	On sale	Ask total	Median mult.
Unknown	53	\$24.8M	2.5×
SaaS	22	\$14.5M	2.3×
AI	54	\$11.5M	4.2×
Health & Fitness	10	\$6.02M	2.8×
Marketing	9	\$5.73M	3.8×
Mobile Apps	29	\$5.32M	3.1×
Entertainment	4	\$5.02M	4.9×

Startup	Category	Asking	MRR
1Lookup	SaaS	\$10.0M	\$207K
Project A	Entertainment	\$5.00M	\$62K
POST BRIDGE	Unknown	\$4.21M	\$42K
Stealth Company	Health & Fitness	\$3.80M	\$30K
Stealth Company	Unknown	\$3.00M	\$83K
Launch Club	Marketing	\$3.00M	\$29K

SaaS and AI are the largest identifiable on-sale categories by asking value. But AI median multiple is higher, so diligence must focus on durable revenue and integration fit.

Action: Build an M&A scorecard: strategic fit, MRR quality, multiple discipline, payment-stack fit and seller transparency.

Convert the spreadsheet into a revenue operating system

Timeframe	Action	Decision output
0–30 days	Clean core fields; tag whales, categories, regions, payment rails and anonymity risk	Revenue command dashboard + top-50 account actions
31–60 days	Run GTM sprints: US+B2B+Stripe, AI-B2B, Analytics-B2B, mobile/RevenueCat	Segment-level conversion and pricing learnings
61–90 days	Diligence 15–20 acquisition targets and benchmark multiples by category	Buy / build / partner recommendation

Operating cadence

Weekly: top-account risk, category movement, payment-rail performance, on-sale pipeline changes, and data-quality fixes.

Board-level choices this enables

Where to put sales capacity, which categories deserve growth budget, where to partner, and which companies to acquire.

Core principle: revenue density beats company count.
