THE CASE OF THE VANISHING STARTUPS

A data investigation into 1,000 startups — and the 129 that wouldn't give their name.

CASE NO. 2026-0730

EVIDENCE: TRUSTMRR DATASET, N = 1,000

FROZEN 30 JUL 2026

1,000 subjects on file.
129 refuse to give their name.

Stan	\$3,569,654 / mo
[REDACTED]	\$747,069 / mo
GojiberryAI	\$494,668 / mo
[REDACTED]	\$364,101 / mo
Rezi	\$259,701 / mo
[REDACTED]	\$191,268 / mo

...excerpt from the top-earner roster (full exhibit on file 06)

129

companies listed only as “Stealth Company” —
no name, no bio, no website.

12.9%

of the entire dataset is filed anonymous. That's
more subjects than any single product category.

INVESTIGATOR'S NOTE

What if the biggest earners in this
dataset
are the ones we can't even name?

*Every "Stealth Company" row hides its identity — but not its revenue.
If silence correlates with size, that's not noise in the data.
That's a pattern worth chasing.*

— HYPOTHESIS, FILED 30 JUL 2026

HYPOTHESIS

EXHIBIT A

The quiet ones make 40x more.

40x

higher median monthly revenue for anonymous “Stealth Company” listings vs. everyone who put their name on the door.

*Lifetime revenue tells the same story:
\$52,410 median (stealth) vs. \$2,601 (named) — a 20x gap.*

EXHIBIT B

13% of the roster. 28% of the money.

Follow the money.

If the 129 “Stealth Company” listings were their own single company, it would sit near the very top of this entire dataset — generating more combined MRR than 850+ named startups put together.

This isn't a handful of lucky rows skewing the average. It's an entire shadow segment of the market.

EXHIBIT C

The Most Wanted List

Top 16 earners in the entire dataset — 7 of them won't say who they are.

Stan \$3,569,654	 \$747,069	GojiberryAI \$494,668	 \$364,101
Rezi \$259,701	Kibu \$234,319	Cometly \$207,616	1Lookup \$207,064
 \$191,268	Brand On Demand \$187,459	Postiz \$177,102	 \$172,201
 \$167,234	 \$161,180	 \$135,899	PROSP \$128,005

7 / 16 — nearly half of the top earners are anonymous.

EXHIBIT D

It's not just the name. It's the whole file.

SUBJECT PROFILE — NAMED COMPANY

Category	Filled — 82% of the time
Value proposition	Filled — 81% of the time
Pricing model	Filled — 75% of the time
Target persona	Filled — 73% of the time
Country	Filled — 82% of the time
X followers (median)	80 followers

SUBJECT PROFILE — "STEALTH COMPANY"

Category	88% blank
Value proposition	95% blank
Pricing model	98% blank
Target persona	95% blank
Country	66% blank
X followers (median)	0 followers

*Yet median active subscriptions: 222 — 22x the
named-company median of 10. Real customers. No paper trail.*

CLOSING ARGUMENT

The verdict

Three working theories on why silence pays:

01 They're already big.

Real, established businesses being sold quietly — through brokers or holding companies — don't need a public bio. Anonymity is a privacy choice made possible by scale.

02 They're protecting a moat.

High-revenue, low-competition products often hide their playbook on purpose — a visible name invites copycats faster than an invisible one.

03 It's a listings artifact.

M&A platforms often anonymize the highest-value deals until a buyer signs an NDA — so “Stealth Company” may simply mark the listings worth protecting.

FILE CLOSED

If you want to find where the real money in
indie SaaS
is hiding — stop reading the names.
Start reading the silence.

METHODOLOGY: TrustMRR public startup dataset, n = 1,000, frozen 30 Jul 2026. “Stealth Company” is the literal, unmodified startup_name value for 129 records. All comparisons (median MRR, lifetime revenue, active subscriptions, field completeness) computed directly against the remaining 871 named records.
