

TRUST MRR

Where the Business Really Stands

A data-driven read on scale, growth, concentration risk, and where to invest next — based on the 1,000-listing verified-revenue sample (frozen 30 Jul 2026).

PREPARED FOR SENIOR LEADERSHIP • PRODUCT, GROWTH & ENGINEERING STRATEGY

AUGUST 2026

A mid-seven-figure MRR base built on 1,000 verified listings

Scale looks healthy on every top-line metric — the following slides test how durable and well-distributed it actually is.

\$13.47M

Total MRR

\$15.6M

30-day revenue run-rate

1,000

Verified listings

500,597

Active subscriptions

\$334M

Cumulative all-time revenue

26

Countries represented

The portfolio is re-accelerating: last 30 days outpaced trend by ~40%

Monthly-equivalent revenue has stepped up from an \$11.2M 12-month average to a \$15.6M 30-day run-rate.

Read it as acceleration, not noise

All three windows use the same definition. A ~40% step-up from the 3-month run-rate is too large to be rounding.

38% of listings show zero recorded growth

381 of 1,000 companies report exactly 0% MRR growth — worth checking whether that's stagnation or a reporting gap.

One account is more than a quarter of total MRR

Cumulative share of MRR held by the top N accounts — concentration this steep is a single point of failure.

Losing the single largest account would remove more MRR than the bottom ~800 listings generate combined.

56% of MRR carries no category tag

Every category ranking in this deck reads on the other 44% — the gap is dominated by one account and 114 stealth listings.

It's fixable: value-proposition text exists for most untagged rows — this is a classification job, not a data-collection job.

AI wins on total dollars; Customer Support wins on dollars per company

AI's lead is volume (197 listings), not per-company strength — median MRR tells the opposite story.

Total MRR by category (\$)

Median MRR per listing (\$)

AI's median listing earns \$446/mo — 12x less than the median Customer Support listing.

B2B is the better dollar, not the bigger crowd

Outnumbered 401 B2C to 255 B2B listings, but B2B earns 5.7x the median revenue and grows 4.6x faster.

Median MRR per listing (\$)

Trimmed-mean 30-day growth (%)

Marketing and Dev Tools are the most B2B-skewed categories — natural places to lean into B2B positioning.

The US alone is 56% of total MRR; France is a distant but clear #2

Among the 76% of listings with a recorded country — concentration mirrors the account-level pattern seen portfolio-wide.

24% of listings have no recorded country — the US share here is likely a floor, not a ceiling.

Four risks compound each other

None are catastrophic alone, but they stack — the biggest account is also the biggest data gap.

HIGH

Single-account concentration

Top 1 account = 26.5% of MRR; top 10 = 48%. A churn event on the #1 account is a material portfolio event.

HIGH

Category blind spot

56% of MRR is untagged. Every category-level decision today is based on <44% visibility into the business.

MED

Declining & volatile segments

Content Creation trending negative (-2.2%); Sales (-11.1%) and Security (-9.5%) are the weakest performers.

MED

Payment infrastructure concentration

87% of MRR depends on one processor (Stripe) — a platform risk as international mix grows.

DO FIRST — NEXT 0–4 WEEKS

Three moves fix both HIGH-severity risks

01

Stand up concentration-risk monitoring

Alerts on the top 10 accounts — the #1 account alone is 26.5% of MRR.

02

Kick off auto-classification

274 uncategorized listings; value-prop text already exists for most.

03

Disclose the data-completeness gap

Every category report in circulation today reflects <44% of MRR.

Near-term: stealth-listing verification, alt-payment connectors. Long-term: B2B/enterprise tier, M&A matching engine.
