

The Biggest Problem in Agriculture Isn't Machinery. It's the Missing Operator.

Labour shortages delay operations, lower yields, and reduce farmer income.

What We Learned From 1,000 Startups

AI Dominance

197 companies focused on AI — it's the category driving breakthroughs.

Automate Repetition

Top startups remove repetitive tasks first.

B2B Resilience

Enterprise models produce stronger recurring revenue.

Yet agriculture remains a massive industry where physical work is still manual.

Agriculture Missed the Automation Revolution

Labour Shortage

Idle Machines

Delayed Operations

Lower Productivity

Each link compounds cost and risk for farmers and operators.

Introducing AGRINEX

Remote Operation

Control machines from anywhere — reduce on-field headcount.

Precision Farming

Sensor-driven actions at the plant level for yield uplift.

Better Safety

Reduce field accidents and compliance exposure.

Higher Utilization

Turn idle assets into productive, revenue-generating fleets.

Why This Moment Matters

Labour Shortage

Fewer available operators;
wages rising.

Affordable IoT

Low-cost sensors make scale
viable.

AI Maturity

Reliable perception and
decisioning unlock autonomy.

Automation Demand

Operators and contractors
seek productivity gains now.

Building More Than Machines

Machine Sales → Software
Subscription → Fleet Dashboard →
Predictive Maintenance → AI
Insights

Hardware drives recurring
software and services revenue.

Recurring

Subscription & telematics.

Services

Pilots, training, maintenance.

Data

AI products and insights.

Our Moat

Deploy
Machines

Collect Data

Acquire
Customers

Improve AI

Hardware is copyable; operational intelligence and data moat are not.

The Next Automation Frontier

From individual farmers to contractors and fleet operators — global TAM expands as farms adopt digitized operations.

Farmers

Small and mid-sized operators seeking labor alternatives.

Contractors

Fleet-first buyers maximizing utilization.

Global Scale

Deploy across geographies with similar labor dynamics.

The Operating System for Agriculture

Remote Control

Immediate labor relief; rapid ROI.

Connected Fleets

Telematics, scheduling, utilization.

AI Optimization

Yield, cost, and timing improvements.

Autonomous Farming

Full-stack autonomy and platform economics.

Join Us in Building the Future of Farming

Funding required: Seed → Series A
(details at meeting)

- Product development
- Pilot deployments
- Manufacturing scale
- AI platform

📄 The next automation revolution will happen on farms.

We are building the platform that turns tractors into intelligent, revenue-generating fleets.
