

SEED ROUND · 2026

TractionIQ

The intelligence layer for the \$B+ bootstrapped SaaS economy

We track 1,000 real companies' revenue, growth, and deals – in real time. While the rest of the market watches VC-backed startups, we've built the only structured, verified data source for the bootstrapped long tail.

What We Track

Revenue, MRR, growth rates, pricing, payment stack – live, verified, structured.

Who We Serve

Bootstrapped founders benchmarking peers. Investors sourcing deals. Researchers licensing trend data.

THE PROBLEM

Bootstrapped SaaS is a \$B+ market with zero visibility

Thousands of profitable, growing SaaS businesses operate entirely outside the traditional data ecosystem. The tools investors and founders rely on weren't built for this market.

No Structured Data Source

There is no public, verified database of small and indie SaaS companies generating real, recurring revenue. The data simply doesn't exist in structured form.

Founders Can't Benchmark

Without peer-comparable data, bootstrapped founders make pricing, growth, and exit decisions in the dark – against anecdotes, not numbers.

Investors Fly Blind

Investors sourcing bootstrapped deals rely on scattered marketplace listings with no verified financials, no growth history, no benchmarking context.

Crunchbase & PitchBook Miss the Tail

Both platforms index VC-funded companies almost exclusively. The bootstrapped long tail – thousands of profitable businesses – is structurally invisible to them.

THE SOLUTION

We built the dataset the market is missing

TractionIQ is a continuously updated, structured intelligence platform covering real bootstrapped SaaS companies – their revenue, growth, deals, and market position. Three distinct use cases, one proprietary dataset.

Core Dataset

Structured revenue data across **30-day, 3-month, 12-month, and all-time** windows. MRR, growth %, active subscriptions, pricing tiers, and payment stack – all verified.

Benchmarking

Founders filter by category, geography, and company stage. Compare MRR, growth rate, and pricing against real peers – not surveys, not self-reported forms.

Deal Sourcing

Investors filter for high-growth companies or active acquisition targets. Full financial history included. No cold outreach required – the data is already there.

Market Intelligence

Category-level trend reports and raw data API access for funds, research firms, and media organizations tracking the bootstrapped SaaS economy.

PROOF OF CONCEPT

1,000 companies. Real numbers. Already tracked.

This is not a concept. The dataset is live, growing, and generating signal today.

1,000

Companies Tracked

Bootstrapped SaaS businesses with verified revenue data – live and continuously updated.

\$15.6M

Combined 30-Day Revenue

Aggregate monthly revenue across all tracked companies in the last 30 days.

\$334M

Combined All-Time Revenue

Total verified lifetime revenue generated across the full company dataset.

\$13.5M

Combined MRR

Monthly recurring revenue in aggregate – the backbone of the benchmarking and deal-sourcing products.

AI dominates — but the long tail is where the volume is

AI leads in both company count (197) and raw revenue (\$2.36M/month), but **Marketing and E-commerce punch above their weight** on a per-company basis. SaaS, Dev Tools, and Content Creation represent the long tail – high volume, significant unmonetized data density.

US-led, but genuinely global — 15+ countries represented

Companies

Monthly Revenue (\$K)

US Dominance

258 companies generating **\$9.84M/month** – the single largest market by a wide margin, and the core of the initial product-market fit.

Emerging Opportunity: India

India has 59 tracked companies but only \$141K/month – the **lowest revenue-per-company ratio** in the dataset. This signals a high-volume, under-monetized market with significant upside as the ecosystem matures.

We catch hypergrowth before anyone else does

The value of TractionIQ isn't just the breadth of the dataset – it's the **speed and specificity of the signal**. These are real companies, tracked continuously, surfacing growth events no marketplace or database would catch.

Stealth US Company

+12,983% MRR growth in 30 days. Undisclosed category. Zero public footprint. Already in our dataset.

Hidden Jobs · HR, US

+1,357% MRR growth. A bootstrapped HR tool with no VC backing and no press coverage – invisible to every competitor.

HotelHero.ai · AI, US

+1,227% MRR growth. AI vertical SaaS for hospitality – the kind of niche hypergrowth story that defines the bootstrapped wave.

LLM Gateway · AI, US

+240% MRR growth with \$47K MRR already. A scaled, profitable AI infrastructure play – verifiable in real time.

Kickly · Games, France

+385% MRR growth. European bootstrapped gaming – a category and geography most investors would never think to look.

📄 **This is the signal VCs and acquirers pay for.** No other platform surfaces it continuously, at this granularity, across bootstrapped companies.

Three revenue lines, one dataset

TractionIQ monetizes the same proprietary dataset across three distinct buyer types – founders, investors, and institutional data consumers – at different price points and access levels.

1

Subscription Tiers

Founders and investors access live benchmarking, growth filters, and deal flow via tiered monthly subscriptions. Self-serve, recurring, scalable.

2

Deal-Sourcing Marketplace

262 companies actively listed for sale. Median asking price: **\$35K**. Average asking price: **\$332K**. Transaction fees and premium listing revenue on every deal closed through the platform.

3

Data Licensing & API

Category-level trend data and raw API access for VC funds, M&A researchers, financial media, and accelerators. Institutional pricing. Annualized contracts.

The bootstrapped SaaS wave is only getting bigger

The infrastructure enabling solo and small-team SaaS has reached a tipping point. The cost of building, distributing, and monetizing software has collapsed – and the number of bootstrapped companies entering the market is accelerating every year.

9+ Payment Rails Now Live

Stripe · RevenueCat · Paddle · Lemon Squeezy · Polar · Dodo – and growing. Each new payment integration is a new data source. Each new data source expands the TractionIQ dataset automatically.

No Intelligence Layer Exists Yet

Despite the explosion of bootstrapped SaaS, **no incumbent has built the aggregation and intelligence layer** on top of this structural shift. The category is wide open.

First-Mover Positioning

TractionIQ is positioned to become the **category-defining data source** before consolidation occurs. The window to establish data network effects is now.

Payment Rail Expansion

Faster rails increase transaction and event volume.

Category Intelligence

Insights layer becomes the market standard.

TractionIQ Aggregation

Collects, normalizes, and structures payment data.

Nobody else is tracking this layer of the market

The competitive landscape is not crowded – it is structurally absent. Existing tools serve adjacent needs but leave the bootstrapped intelligence layer entirely uncovered.

Dimension	Crunchbase / PitchBook	Flippa / Acquire	TractionIQ
Coverage	VC-funded only	Listed sellers only	All bootstrapped SaaS
Revenue Data	Self-reported, static	Listing-only snapshot	Verified, continuous
Growth Tracking	None	None	30d / 3m / 12m / all-time
Benchmarking	None	None	Category + geography filters
Deal Sourcing	None	Marketplace only	Deal flow + financial history
Data Licensing	Enterprise API (VC focus)	None	Bootstrapped-native API

❏ Crunchbase and PitchBook are not competitors – they serve a different market. Flippa and Acquire are not intelligence platforms – they are listing boards. TractionIQ is the only continuous, verified, benchmarkable dataset for bootstrapped SaaS.

Raising \$750K to scale from 1K to 50K+ companies

The Terms

\$750,000 SAFE note

8% equity at \$9.375M post-money valuation

18-month runway to milestones

Use of Funds

- Data engineering & pipeline infrastructure
- Payment rail integrations (expanding tracked companies)
- Product build (benchmarking, deal flow, API)
- Go-to-market: founders, VCs, M&A advisors

18-Month Milestones

01

50,000+ Companies Tracked

From 1K to 50K – 50x data scale via new payment rail integrations and automated ingestion pipelines.

02

500 Paying Subscribers

Founders and investors on monthly subscription tiers accessing live benchmarking and deal flow.

03

20 Marketplace Deals Closed

Verified acquisition transactions through the TractionIQ deal-sourcing marketplace.

04

3 Licensing Partnerships

Data licensing agreements with VC funds, research institutions, or financial media organizations.
