02 SOUNDBOOST.AI

TURKIYE

03 TEXTBEE

ETHIOPIA

What survives nine filters

The listed market is mostly noise. Median asking price of a developing-market company that is actually for sale: \$3,000. Median MRR of that same set: \$0. Which is why this is an investment mandate, not an acquisition one.

WHERE GROWTH ACTUALLY LIVES

Biggest is not fastest

Current run-rate divided by trailing-year revenue, for every company with 9+ months of history. Above 1.00 means the sector is running ahead of its own past year.

THE AI TRAP

364

AI companies in the file with 9+ months of revenue history — the largest category by far.

46% shrinking MRR

23% growing MRR

The category grows because entrants keep pouring in — not because the companies inside it compound. Buying "AI" here is buying churn.

Three of these ten sectors are home to the three picks. The largest sector of all, by company count, is the one I would not put a rupee into.

Supergrow

LinkedIn growth platform for creators, ghostwriters and teams — writing, engagement and analytics in one place, at \$34 a head.

MRR	MRR GROWTH 30D	ANNUAL RUN-RATE	TRAILING 12 MONTHS	MOMENTUM	PAYING SUBSCRIBERS
\$79,479	+24.9%	\$386,592	\$192,683	2.01x	2,315

THE CASE

The largest and fastest-compounding developing-market company that clears every gate. Run-rate is double its own trailing year, on 2,315 paying subscribers rather than a handful of whales. Domain rating 59 and 5,957 followers mean acquisition is earned, not rented. Global expansion needs no new product: LinkedIn is one market, English-first, and Stripe already collects everywhere.

WHAT COULD BREAK IT

Reported MRR of \$79,479 sits against only \$32,216 actually collected in the last thirty days, and the three-month revenue field is blank. That gap is either annual billing recognised oddly or an overstated MRR — reconcile the payment-provider data before you price the round. Platform risk is real: the entire business is a permission granted by LinkedIn.

SoundBoost.ai

AI music mastering driven by natural-language prompts — for bedroom producers through to mastering engineers.

RUN-RATE / TRAILING YEAR

3.77x

The steepest curve in the entire developing-market cohort. Revenue more than doubled in thirty days.

MRR

\$14,869

+39.9% in 30 days

REVENUE, LAST 30 DAYS

\$41,931

+107.8% in 30 days

ANNUAL RUN-RATE

\$503,172

against \$133,355 trailing

PAYING SUBSCRIBERS

2,027

ARPU \$7.34

THE CASE

Distribution is already global: RevenueCat and Stripe mean the App Store is the go-to-market, and music mastering needs no localisation. Entertainment is the one sector in the file where growing companies outnumber shrinking ones two to one.

WHAT COULD BREAK IT

ARPU of \$7.34 on weekly and monthly consumer plans is churn-heavy by construction, and a domain rating of 12 means there is no organic moat underneath the spike. LANDR and iZotope sit directly above it. Underwrite the cohort retention curve, not the headline.

textbee

The open-source Twilio alternative: send and receive SMS through an Android phone you already own.

“No gateway fees. No per-message charges.
Live in minutes.”

Its economics are strongest exactly where Twilio's per-message pricing is unaffordable — which is most of the world. This is the only pick whose global thesis is the product itself.

THE CASE

The only company in the cohort growing on both MRR and revenue while sitting in the healthiest large sector. Global-portability score of 1.00 — the highest in the file. 18,498 monthly visits on a modest domain is organic developer pull, not paid acquisition. And it is the one pick also available outright, at \$60,000 — roughly 1.5x forward revenue.

WHAT COULD BREAK IT

A \$40,836 run-rate is seed-scale: this is an option, not a position. Only about a third of revenue is contracted, the rest is usage. A single Ethiopian entity brings FX and repatriation friction. And the moat is a price gap — a Twilio cut or an Android messaging-policy change is existential.

MRR

\$1,074 +15.8% in 30 days

REVENUE, LAST 30 DAYS

\$3,403 +44.6% in 30 days

ANNUAL RUN-RATE

\$40,836 against \$21,395 trailing

How I would size it — and what I refused

55%

Supergrow

The compounder. Scale, 2,315 paying customers and a sector at 1.90x. Core position.

30%

SoundBoost.ai

The momentum trade. Highest velocity in the file, shortest half-life. Size it to be wrong.

15%

textbee

The asymmetric option. Smallest cheque, strongest structural global thesis, buyable outright.

READ THE DATA WITH ONE HAND ON THE BRAKE

51% of the file reports exactly 0% MRR growth — unreported, not flat. Supergrow's 3-month revenue field is empty. Every figure is self-reported through payment-provider API keys and unaudited.

WHAT I LEFT ON THE TABLE

Hirevire · IN

\$13,043 MRR, 161 customers at \$81, domain rating 60 — the safest business here, and third on my model. Cut because both 30-day lines are flat and Recruiting & HR clears the growth line by only six points.

SEOBOT · TR

\$1.01m trailing revenue, the largest in the cohort. Run-rate is 0.61x that; MRR down 10.2%. Size is not momentum.

Web3Forms · IN

Domain rating 81, 2,408 subscribers, MRR up 20.6%. Fails the 9-month gate outright — all-time revenue equals trailing-12m, and 59% of it landed last quarter.
