

Inside 1,000 Indie Startups

A data-driven exploration of revenue dynamics, category yield, geographic density, and exit multiples across verified bootstrap SaaS ventures.

 1,000 SaaS Startups

 29 Analytic Fields

 Verified Revenue

Dataset Architecture & Coverage

TrustMRR tracks real-time, financial-backed metrics from independent founders, detailing real revenue traction and strategic positioning.

1,000 Companies

Complete dataset covering real SaaS products from early-stage to scaled micro-giants.

29 Data Attributes

Metrics include 30-day/annual revenue, growth rates, subscribers, audience type, and DR.

26.2% On Sale

Over a quarter of all tracked ventures are actively listed on public acquisition markets.

19.7% Pre-Revenue

Nearly 1 in 5 startups report \$0 MRR, capturing the raw reality of early founder journeys.

50+ Countries

Global founder representation led by US, European, and emerging Asian tech ecosystems.

29 Categories

Diverse market segments spanning AI utilities, developer tools, and niche B2B SaaS.

Revenue Skew: Mean vs. Typical Startup

\$282

Median Monthly Revenue

The median reflects the true benchmark for a typical startup, far removed from top-tier outlier hype.

\$13,472

Mean Monthly Revenue

Mean MRR is ~48x higher than median due to massive outlier platforms pulling up the dataset average.

Category Dynamics: Headcount vs. Value

High Headcount: AI Tools

Artificial Intelligence represents the single largest startup category by headcount, boasting **3× more companies** than any other segment.

However, intense saturation and low barriers to entry have diluted average earnings per enterprise.

High Yield: E-Commerce & Analytics

While maintaining significantly lower startup counts, niche categories like **E-Commerce Tools** and **Analytics Platforms** lead in unit revenue.

Strong enterprise willingness-to-pay results in substantially higher mean monthly recurring revenue per venture.

Global Hubs: Volume, Share & Earnings

Country	Startup Count	Market Share (%)	Mean Monthly MRR	Strategic Ecosystem Insight
United States	430+	43.0%	\$18,400	Dominates global founder density and highest revenue scaling potential
United Kingdom	80+	8.0%	\$11,200	Leading European hub with high recurring subscription stability
Canada	45+	4.5%	\$9,800	High conversion rates with strong integration into US tech markets
Germany	40+	4.0%	\$8,500	Strong B2B productivity ecosystem with solid engineering foundations
India	38+	3.8%	\$5,100	Fastest-growing founder network delivering cost-effective global SaaS
France	30+	3.0%	\$7,200	Thriving micro-SaaS cluster focused on design, media & creator tools

Target Audience: B2B Monetization Advantage

\$1,036

B2B Model

255 Startups Tracked

Business-focused SaaS achieves nearly **6x higher median MRR** than consumer tools, driven by higher contract values and stickier retention.

\$352

Hybrid Model

56 Startups Tracked

Ventures serving both consumers and SMBs balance broader volume reach with moderate pricing power.

\$181

B2C Model

401 Startups Tracked

Consumer SaaS benefits from rapid user acquisition but faces low willingness-to-pay and high churn rates.

Startup Marketplace: Acquisition Dynamics

26.2%

Startups Listed

262 ventures currently seeking acquirers.

\$35K

Median Asking Price

Accessible liquidity range for micro-PE.

3.9x

Revenue Multiple

Median valuation asking multiple.

\$1,055

Listed Median MRR

vs. \$187 for non-listed startups.

Key Marketplace Insight

Marketplace listings cluster tightly around established mid-tier ventures seeking cash-outs.

The largest revenue whales (e.g. Stan, Brand On Demand) remain private and unlisted, keeping top-market earnings out of public marketplaces.

Strategic Key Takeaways

1. Benchmarks

Always evaluate median MRR (\$282) rather than average MRR (\$13.4k) to establish realistic indie expectations.

2. Headcount $\neq$ Yield

AI tools face high market saturation, while specialized Analytics and E-Commerce offer superior unit revenue.

3. Global Gravity

The US market leads both startup volume (43.0%) and average monthly revenue density (\$18,400).

4. B2B Premium

B2B SaaS models generate ~6x higher median monthly earnings compared to consumer-facing products.

5. Followers $\neq$ Revenue

Social follower counts show near-zero correlation ($r \approx 0.02$) with actual recurring MRR growth.

6. Mid-Market Exit

Acquisition listings concentrate in established \$1k+ MRR ventures at an average ~3.9x valuation multiple.
