

— NRI INVESTMENT INFRASTRUCTURE

Corridor

Compliant payment & identity rails that
unlock foreign capital for Indian mutual funds
— one KYC, one flow, zero friction.

Seed round · August 2026

Why this data is credible

- Revenue in the TrustMRR set is read directly from each founder's connected processor — Stripe, RevenueCat, Paddle — not self-reported. 1,000 unique listings, revenue fields 100% complete.
- Market context for the NRI corridor is sourced to RBI, the World Bank and AMFI — the primary record for remittances, deposits and mutual-fund assets.
- Where the underlying data is partial — country 76%, category 73% — we flag it and never generalise a subset to the whole market.
- Every NRI-specific operating figure in this deck is marked as an illustrative estimate, not a dataset value.

How big the market is

\$133.8m

Verified 12-month card
volume across 1,000 listings

\$161.7m

Annualised recurring run-
rate — the sticky part of
the pool

~\$4.4m

Implied aggregator revenue
at a ~3.2% blended take

65

Countries represented —
cross-border is the default,
not the edge

A core sample of a global merchant layer: verified where it matters, and already earning processors
~\$4m a year off just these thousand accounts.

Revenue follows a power law

Share of total volume

Mean volume per account is \$133,750 — the median is \$3,069, 44× apart. The pool is carried by a thin top layer, so the money is in high-ticket flows, not account count.

Who owns the rails

PROVIDER	SHARE OF ACCOUNTS	SHARE OF VOLUME	MEDIAN MRR
 Stripe	64.9%	90.9%	\$660
 RevenueCat	19.4%	5.2%	\$240
 Superwall	2.0%	2.7%	\$6,401
 Paddle	1.9%	0.8%	\$161
 Lemon Squeezy	2.9%	0.5%	\$76
 Polar	4.3%	0.3%	\$0

Stripe holds 65% of accounts but 91% of the volume. The largest book is not the richest one — Superwall's median account bills \$6,401 against Stripe's \$660.

Quality of book, not size of book

% of accounts at or above \$10k MRR

Only ~1 in 5 accounts clears \$10k MRR. The specialists — Superwall, Whop — convert nearly half, because they own one hard flow end to end.

01

— From checkout to compliance

Two rails, one market

Rail one — checkout

Hosted pay-in, cards and subscriptions. Owned by incumbents; Stripe alone clears 91% of this cohort's volume. Commoditised, sub-3% take, winner-take-most.

Rail two — compliance

Identity, KYC, tax and cross-border routing. Unpriced and unbundled today — and the only capability moving accounts off the incumbent. This is where the next decade of PA value accrues.

The Indian PA market is graduating from merchant checkout into deep, compliance-heavy infrastructure that unifies identity, KYC and payments.

14%

137 of 1,000 accounts have already switched to a merchant-of-record that absorbs tax and compliance — carrying just 1.8% of volume. The switch is driven by one feature: taking the compliance burden off the merchant. That is the wedge Corridor builds on.

02

— The NRI corridor

The NRI corridor

\$129.4B

Record NRI remittances to India in 2024 — India ranks #1 globally (RBI / World Bank)

**₹82.2L
cr**

Indian mutual-fund AUM, 30 Jun 2026 — about \$980B (AMFI)

**₹14.2L
cr**

NRI bank deposits, Mar 2025 — ~\$165B of capital already onshore (RBI)

18.5M

Indians living overseas — the addressable investor base (World Bank)

The capital exists and wants exposure to India. What is missing is a compliant rail to move it into funds.
All macro figures cited to RBI, the World Bank and AMFI.

NRI onboarding is broken

The two-account maze

Every NRI must open and correctly route NRE vs NRO accounts before a single rupee is invested — misrouting fails compliance and stalls the flow.

Disjointed video KYC

Identity is re-collected by banks, RTAs and AMCs in turn, each with its own video-KYC loop and its own document list.

Paper and wet-ink

Physical forms, attestations and courier loops stretch onboarding to weeks across time zones and jurisdictions.

Regulatory overhang

SEBI, RBI and FATCA / CRS obligations — PIS, LRS, tax residency — arrive unbundled and error-prone for the investor.

The result is high investor drop-off before the first investment — the capital turns back at the border.

Drop-off figures are illustrative estimates.

Corridor: one compliant rail

One NRI KYC

Video KYC, tax residency, FATCA / CRS and NRE / NRO routing captured once — then reused across every bank, RTA and AMC.

Automated payment flows

Investment pay-ins routed to the correct account and AMC automatically, in the investor's currency, with reconciliation built in.

AMC-ready rails

A single integration that lets any Asset Management Company accept compliant foreign capital with zero net-new compliance headcount.

Corridor is the specialized payment & identity aggregator for the NRI corridor — unifying compliant KYC with investment payment flows to unlock foreign capital for Indian AMCs.

Why the economics work

	DOMESTIC PA COHORT (OBSERVED)	NRI INVESTMENT CORRIDOR (ILLUSTRATIVE)
Take basis	~3.2% blended, thin and falling	Fee on high-ticket, recurring cross-border flows
Typical account	\$3,069 volume / \$282 MRR a year	Multi-lakh SIP + lump-sum tickets
Value shape	Winner-take-most; top 10 = 50.6%	Every onboarded NRI is high-ticket and sticky
Moat	None at checkout	Regulatory + identity graph — costly to rebuild

Same aggregator mechanics, an order of magnitude better unit economics: high ticket, high margin, and defensible. Corridor-side figures are illustrative.

The ask

- Raising a **\$3.0M seed** to build the compliant NRI KYC + payments rail and sign the first three AMCs. (illustrative)
- Valuation benchmarked to the dataset's own market comp: payment accounts trade at a **~4.4× trailing-revenue** multiple — median ask \$35,000 on \$7,967 revenue across 262 for-sale accounts.
- Use of funds: compliance & KYC infrastructure, AMC integrations, and the NRE / NRO routing engine.
- Why now: \$129.4B of NRI capital and ₹82L cr of mutual-fund AUM meet a compliant rail that does not yet exist.

Caveats on the record

- TrustMRR is one public listing site of indie SaaS startups — a core sample of a global merchant layer, not the Indian PA market. Provider shares sum above 100% (18 accounts connect two processors).
- Take-rate figures are estimates, not observed; country (76%) and category (73%) fields are partial, so segment cuts describe a subset, not the cohort.
- All India / NRI operating figures — drop-off, ticket sizes and Corridor's own projections — are illustrative estimates, not dataset values.
- Macro figures sourced to RBI, the World Bank and AMFI, 2024–2026. TrustMRR snapshot frozen 30 July 2026.
