Delivering Bharat's Dreams, Efficiently.

Our Journey Today

A clear path to reimagine last-mile for Bharat.

01

THE PROBLEM STATEMENT

Understanding the Core Challenge

Why the current last-mile model is unsustainable for Bharat.

02

THE UNIT ECONOMICS BREAKDOWN

Breaking Down the Numbers

The real cost drivers and leaks affecting profitability at scale.

03

THE VAANI NETWORK SOLUTION

Our Scalable, People-First Solution

The VAANI Network: a layered ecosystem designed for trust, density & efficiency.

Redesigning last-mile. Driving **profitable, inclusive commerce** for Bharat.

The Problem is Not Delivery. It is Misalignment.

PROBLEM REALITY

40-55%

Last-mile = 40-55%
of logistics cost

AOV $\approx$ ₹350 $\rightarrow$
cannot absorb
delivery cost

RTO = 20-30%
leakage

Pickup adoption
< 10%

India doesn't
need faster
delivery.

It needs
smarter delivery.

STRATEGIC SHIFT

FROM:

Fragmented Doorstep Delivery

TO:

Kirana Pickup Network
(Trust + Density)

Community Clusters
(Demand Aggregation)

Layered Logistics Architecture

Meesho must transition from a **delivery platform**
to a **distributed commerce ecosystem.**

Lower Costs
Sustainable
Unit Economics

Lower RTO
Higher Reliability
& Customer Trust

Higher AOV
Better Value,
More Orders

Lower Carbon Footprint
Greener, Smarter
Logistics

Data doesn't lie. Unit economics define scalability.

BEYOND DOORSTEP: TRANSIT-BASED ECONOMY TO SCALE PICKUP

Transit Hubs

Metro, bus & railway stations → Vending machines for small items

Office Clusters & SEZs

Large office buildings & industrial zones → Pickup points setup

Revenue Generating Points

Cloak rooms, EV charging stations, vending machines → Earn while you deliver

AI-Powered Pickup Matching

AI predicts buying behaviour → Routes order to the nearest pickup point

FROM DELIVERY COST CENTER TO DISTRIBUTED PROFIT NETWORK

COST COMPARISON PER ORDER

₹ per Order

Total Logistics Cost per Order (Est.): ₹78.2+

This is not a logistics problem.
This is a behavioural + density failure.

RTO CRISIS

- COD-heavy (~75%)
- Low intent orders

➤ 8-12% GMV LOSS

RTO Rate
20-30%

BEHAVIOUR GAP

India Pickup Adoption
 $<10\%$

VS

Global Benchmark
 30-60%

ONE MAN. HUNDREDS SAVED.

1 Meesho Hospitality Partner
 • Manages 100s of orders via pickup hub
 • Provides assistance, storage & experience

=

100s of Delivery Boys
 • High fuel cost
 • Lower efficiency
 • High failure & RTO

Lower cost. Higher reliability. Better experience.

THE SOLUTION: TRANSIT + COMMUNITY PICKUP NETWORK

Customer Places Order

AI Predicts Buying Behaviour

Routes to Nearest Pickup Point

Order Arrives at Pickup Hub

Customer Picks Up at Convenience

Smarter, Cheaper, Greener Delivery

WHY IT WORKS BETTER

Higher Pickup Adoption

↑ 35-45%

Lower Cost per Order

↓ 20-30%

Lower RTO Rate

↓ 30-40%

Better CX & Convenience

AOV ≈ ₹350
Cannot absorb high logistics cost

Low Margins
Thin contribution per order

High Cost Structure
Limits scalability & profitability

Unsustainable Model
Without structural realignment

Meesho doesn't just deliver.
Meesho redesigns commerce for Bharat.

The VAANI Network: From Cost Burden → Profit Engine

Delivering Bharat's
Dreams, Efficiently.

SOLUTION ENGINE

1. VALMO VERIFIED KIRANA POINTS

- 500m radius
- 12x density vs lockers
- ₹5 – ₹10 payout per order

→ Cost ↓ 25–30%

2. COMMUNITY CLUSTER COMMERCE

- WhatsApp / reseller-led group buying
- 5–10 orders bundled

→ AOV ↑ 20%

3. BEHAVIOURAL ENGINE ("THE SWITCH")

- Home Delivery ₹40 vs Pickup FREE + ₹15 OFF
- Default nudges + incentives

→ Adoption ↑ 35–45%

4. AI RISK INTELLIGENCE

- Predict high-RTO users
- OTP + prepaid enforcement

→ RTO ↓ 30–40%

THE VAANI NETWORK FLOW

Higher Density
3x more orders per drop

Trust + Proximity
Leverages Kirana network

SPECIAL NEEDS
Assisted Delivery

BEFORE VS AFTER TRANSFORMATION

BEFORE AFTER

LOGISTICS COST
(per order)

₹120

₹90

↓ 25–40%
REDUCTION

RTO RATE

25%

15%

↓ 30%
REDUCTION

AOV (Average Order Value)

₹300

₹360

↑ 20%
INCREASE

* Numbers are indicative and based on internal estimates

₹300 Cr+
ANNUAL SAVINGS
Direct bottom-line impact

CAPACITY ↑ 30%
WITHOUT FLEET EXPANSION
Handle 30% more orders with the same infrastructure

CARBON FOOTPRINT ↓ 60%
SUSTAINABLE. SCALABLE. BHARAT-FIRST.
Eliminates last-mile dispersal, reduces emissions dramatically

**Meesho doesn't optimize delivery.
It redesigns commerce for Bharat.**
