

You have only \$10,000. One investment. One chance.

Which startup deserves it?

1,000

startups screened

\$13.5M

combined monthly revenue

262

actually buyable today

1

decision

The biggest number on the page is almost never the best investment.

Eight lenses. A startup must survive all of them — a single failure is disqualifying, not discountable.

Weighting applied later in this memo → Growth 22% · Valuation 22% · Scale 18% · Moat 13% · Durability 13% · Stickiness 12%

Ten companies own half the market. The other 990 are fighting for scraps.

48% of all monthly revenue in the dataset sits in the top 10 names. 591 startups earn under \$1,000/month.

REVENUE IS BRUTALLY CONCENTRATED

Top 10 startups \$6.5M MRR

48% of all revenue

Next 200 (>\$10k MRR) \$5.9M MRR

44% of all revenue

The remaining 790 \$1.1M MRR

8% of all revenue

CATEGORY ≠ OPPORTUNITY (MEDIAN MRR)

Education		\$2,141 (n=30)
Marketing		\$1,586 (n=42)
Analytics		\$1,294 (n=19)
Content Creation		\$1,254 (n=36)
Fintech		\$500 (n=16)
AI		\$446 (n=197)
SaaS		\$303 (n=66)
Productivity		\$42 (n=49)

The question this raises: AI is 20% of all companies but has a median MRR of just \$446 — and still asks 3.8x ARR versus 3.1x for everything else. Who is actually making money?

\$10,000 cannot buy 1,000 companies. It can buy a stake in 49.

Assumption (labelled): \$10k buys a pro-rata stake at the listed asking price — a fractional/SPV position, not a full acquisition.

startups in dataset

Everything TrustMRR verifies

262

listed for sale

The only ones you can actually buy into

194

with real revenue + a price

*Zero-MRR listings are stories,
not assets*

49

**priced under 6x ARR with
>\$5k MRR**

*Below-scale and over-priced
names removed*

Median asking price across the surviving 49: 3.2x ARR. The cheapest four sit below 1.2x — which is where the rest of this memo lives.

The cheapest company on the board is cheap for a reason we can measure.

\$128,005 MRR at a \$1.0M asking price — 0.65x annualised revenue, the lowest multiple of any credible listing.

\$128,005

MRR — largest of any listed company

0.65x

asking price / annualised MRR

\$507,250

revenue actually collected, 12 months

1,108

active subscriptions

WHAT EXCITES US

- Highest absolute MRR in the entire for-sale universe
- B2B pricing (\$29–\$79/mo) with 1,108 paying seats
- AI outbound sits in the one AI niche with budget attached: sales
- \$10k = 1.0% of the company at ask

WHAT CONCERNS US

- Trailing 12m cash (\$507k) is 33% of what the run-rate implies
- Growth field is blank — the single most important number is missing
- Domain rating 30: no organic moat, likely paid/outbound acquisition
- 197 AI competitors in this dataset alone

VS. PEERS

MRR vs listed peers		1st
Price multiple		1st
Growth evidence		n/a
Moat (DR 30)		mid

VERDICT — Advance, with a flag: the price is real, the run-rate is not yet proven by collected cash.

A \$790k run-rate that collected \$0 last month is not a business — it's a screenshot.

Speel.co scores second on our model and fails the only test that cannot be argued with: did money arrive?

\$65,843

reported MRR

\$0

revenue recorded, last 30 days

\$180,966

revenue collected, all time

46

domain rating — best-in-cohort

WHAT EXCITES US

- Strongest brand signals of any finalist: DR 46, 8,395 X followers
- Clean three-tier B2C-to-prosumer pricing (\$49 / \$109 / \$139)
- AI UGC video ads is the fastest-moving ad-creative niche
- At \$500k ask, \$10k buys 2.0% — the largest stake of the top three

WHAT CONCERNS US

- Reported MRR annualises to \$790k. Lifetime collected revenue is \$181k.
- \$0 recorded in the trailing 30 days and trailing 3 months
- Growth reported as exactly 0.0% — a static, not a rising, curve
- Entirely dependent on Meta/TikTok ad formats it does not control

VERDICT — Eliminate. We do not underwrite a run-rate that the cash ledger has never seen.

TRUSTMRR DATASET · 1,000 STARTUPS · FROZEN 30 JUL 2026

06

The least glamorous company in the dataset is the only one where every number agrees.

A height-tracking habit app. No AI in the name. 16,464 people paying for it, and the cash ledger backs every claim.

\$58,510

MRR

\$784,573

collected in 12 months — 100% of all-time

16,464

active subscriptions

+3.6%

MRR growth, last 30 days

WHAT EXCITES US

- Run-rate (\$702k) is below collected cash (\$785k) — conservatively stated
- \$51,353 landed in the last 30 days: the ledger is live
- 16,464 subscribers — 15x the subscriber base of PROSP or Speel
- Growing while priced at 1.27x trailing revenue

WHAT CONCERNS US

- Domain rating 21 and zero X following: no owned distribution
- \$47/subscriber/year — low ARPU, so scale must come from volume
- Consumer health habit apps churn; retention data is not in the dataset
- Single-product, single-outcome — no expansion revenue path visible

VS. PEERS

VERDICT — Advance as front-runner. The only finalist where MRR, 30-day cash, 12-month cash and subscriber count tell one story.

Two listings would hand you 20% of a company for \$10,000. Both are traps.

The only names where \$10k buys real ownership rather than a token stake — and the only ones priced that low for a reason.

Notionlytics

Analytics · Notion add-on

\$48,000	\$36,457	\$12,694	63	-2.9%
Ask	Reported MRR	12m cash	Subs	Growth

20.8% for \$10k

Reported MRR of \$36k against \$12,694 collected in 12 months and 63 subscribers. $63 \times \$30/\text{mo} \approx \$1,890/\text{mo}$. The MRR field is not survivable arithmetic.

DropPop

SaaS · E-comm automation

\$55,000	\$27,797	\$56,929	1,335	-0.3%
Ask	Reported MRR	12m cash	Subs	Growth

18.2% for \$10k

\$4.99 first-month pricing with 1,335 subs. Lifetime revenue \$57,350 — essentially all of it in the last 12 months, and \$0 in the last 30 days. A promo cohort, not a subscription base.

The pattern: every listing where \$10k buys meaningful ownership has a reported MRR that its own cash ledger contradicts. Ownership percentage is the cheapest thing to sell.

Forty-six ways to be almost right.

Each cut removes a company that is excellent at one thing and fatally average at another.

Plutio (Super Work AI)

+ Best moat on the board — DR 68, \$1.44M lifetime revenue.

— Priced at 5.5x ARR with \$19.6k MRR. Great asset, wrong price.

Atlas

+ \$390k collected in 12 months, 2,913 subscribers, DR 46.

— MRR shrinking -5.8% at a 3.9x multiple. Paying a premium for decline.

Lunchbreak

+ \$1.37M lifetime revenue — real, durable demand.

— -9.1% monthly and an AI-detection product whose moat expires with each model release.

Conductor

+ Fastest grower of the finalists at +9.6%, real B2B API product.

— 190 customers at a \$1.25M ask. 3.4x price for a pre-scale customer base.

Taller

+ 12,971 subscribers and \$43k collected last month.

— Same thesis as GoTall, half the collected cash, 750k ask. Strictly dominated.

Backlinker AI

+ +5.3% growth at 1.08x ARR — genuinely cheap.

— 66 subscribers at \$300/mo. One churned logo removes 1.5% of revenue.

49 → 3. What survives is not the best product, the best brand, or the best story. It is the company whose numbers cannot be argued with.

Three companies. One is priced on evidence, two are priced on assertion.

Head-to-head on the eight lenses. Confidence = composite of scale, growth, price, moat and stickiness.

Speel and PROSP win on price. GoTall wins on proof. In a market where 262 sellers write their own MRR field, proof is the scarcer asset.

THE DECISION

If I had \$10,000 today, I would put it into GoTall.

1.0% of a \$1.0M asset generating \$784,573 of collected revenue and growing — bought at 1.27x trailing revenue.

Every number reconciles

\$58,510 MRR · \$51,353 collected in 30 days · \$784,573 in 12 months. No finalist else survives this test.

Priced below its own cash

\$1.0M ask against \$784,573 of trailing revenue = 1.27x. The median listing asks 3.2x.

The base is real, not reported

16,464 active subscriptions — 15x PROSP and Speel combined-adjacent. Revenue spread across thousands, not concentrated in 63 accounts.

Growing at the moment of sale

+3.6% MRR in the last 30 days. Every eliminated peer was flat or shrinking.

Asymmetric on the downside

At 1.27x trailing revenue, roughly 15 months of current cash returns the entire purchase price. The downside is bounded by revenue already banked; the upside is unbounded.

Assumption, labelled: a \$10k position is fractional and assumes pro-rata economics at the listed ask. Retention data is not in the dataset — churn is the single risk this analysis cannot price.

The right answer changes the moment your appetite for risk does.

Same dataset. Four different investors. Four different cheques.

IF YOU ARE RISK-AVERSE

GoTall

\$1.0M ask · 1.27x trailing revenue · 16,464 subs · +3.6%

Bought below the cash it has already collected.

IF YOU ARE BETTING ON AI

PROSP

\$128,005 MRR · 0.65x run-rate · 1,108 B2B seats

The only AI listing where the multiple is lower than the risk.

IF YOU WANT STEADY RETURNS

ColdSire

\$18,887 MRR · 0.95x ARR · \$1.0M lifetime revenue · 1,048 subs

Six figures of lifetime cash, boring B2B SaaS, near-yield pricing.

IF YOU ARE CHASING 100x

Conductor

+9.6% monthly · QuickBooks API infrastructure · 190 customers

Smallest customer base, deepest technical moat, highest ceiling.

**In a market of 1,000 startups, the edge was never in finding the biggest number:
It was in finding the one company whose numbers agreed with each other:**
