The US leads, but the market is global

Country known for 759 of 1,000 listings — the US accounts for 34% of those

Country data is missing for the remaining 241 listings.

Fewer B2B businesses — but they earn far more

B2C listings outnumber B2B, yet median B2B MRR is 5.7x higher

B2C median MRR

\$181 / mo

B2B median MRR

\$1,036 / mo

Consistent with typical differences in per-customer pricing between business and consumer software.

A near-perfect long tail

Only 16 listings (1.6%) clear \$100K/month — they skew every average in this dataset

Read the data with these caveats

Data quality notes worth keeping in mind

● **Sparse traffic data**

visitors_30d and revenue_per_visitor_usd are missing for 82% and 86% of rows — treat revenue-per-visitor comparisons as directional only.

● **Self-reported fields**

Category, pricing model, target persona, and audience type are missing for 27–36% of listings; category totals are shares of the full dataset, not of known-category listings.

● **“Stealth Company” placeholders**

A repeated placeholder name for founders who haven't disclosed a public startup name — several are among the highest earners.

● **Self-reported revenue**

MRR figures come from connected Stripe/RevenueCat accounts and were not independently verified for this summary.

● **Frozen snapshot**

Data is frozen as of 30 July 2026 and does not reflect any changes since that date.

The takeaway

**A small AI-heavy long tail is
quietly generating \$133.8M a year**

1,000 listings. 16 outliers driving the averages. A quarter of the market already for sale at a median 2.3x multiple.
