

TrustMRR Executive Insights

1,000 startups analyzed on what actually predicts revenue — not vanity metrics.

1,000

Startups analyzed

344

Growing (34.4%)

337

Declining (33.7%)

5.7×

B2B vs B2C median MRR

What this dataset actually shows

The goal is to identify which choices (pricing model, audience type, category) separate higher-revenue startups from the rest. Three decisive patterns emerge from the 1,000-row sample:

Subscription pricing shows both higher median MRR and a healthier growth mix than one-time models. **B2B** outperforms B2C by 5.7× on median MRR with a stronger growing share (44% vs 34%). **Growing startups** (34% of count) capture 57% of all 30-day revenue.

MONETIZATION MODEL COMPARISON

Subscription wins on both revenue quality and growth health

Subscription

n=365 · med MRR \$481
39.7% growing — best volume + growth balance among large cohorts.

One-time

n=87 · med MRR \$124
Lowest median; 40% declining. Revenue is front-loaded and harder to compound.

Usage / Credits

n=21 · med MRR \$10k+
Highest median but tiny sample. High-intent buyers, not a mass model.

GROWTH DISTRIBUTION

Startups split three ways — revenue does not

Materiality insight

Growing startups (34% of count) generate 57% of revenue. Flat businesses contribute only 5.1% — low informational value for ranking or acquisition screens.

CATEGORY PERFORMANCE

AI leads on volume — not necessarily on revenue quality

Revenue leader in each category

Category	Revenue leader	30-day revenue
E-comm	Brand On Demand, Inc.	\$984,522
Marketing	Stack Influence	\$868,322
AI	Comp AI	\$575,343
SaaS	1Lookup	\$391,321
Analytics	Cometly	\$221,991
Education	Kibu	\$200,210
Social Media	Postiz	\$172,955
Mobile Apps	PropGPT: AI Props Analysis	\$83,818
Health & Fitness	GoTall	\$51,353
Dev Tools	Web3Forms	\$42,813

AI volume trap

197 startups (largest cohort) yet median MRR only ~\$503. High count does not equal high quality.

Marketing & E-comm

Strong absolute revenue with fewer players. Higher concentration of meaningful businesses.

Read the tails

Outlier-driven categories (single large winners) inflate totals. Always check median and growth mix together.

B2B wins decisively — act on the proven combination

B2B

Median MRR **\$1,036**

Growing share

44.3%

Declining share

32.9%

n = 255 startups

B2C

Median MRR **\$181**

Growing share

33.9%

Declining share

38.4%

n = 401 startups

Actionable takeaways from the dataset

- 1. Prioritize B2B + subscription** — the combination that simultaneously delivers higher median revenue and a healthier growth mix.
- 2. Weight growing businesses heavily** in any ranking or screen; they produce 1.7× the revenue share relative to their headcount.
- 3. Treat category volume with caution** — AI is crowded; look for concentration and median quality, not just total dollars or startup count.
