\$13.5M

TRACKED MRR

About the dataset

What TrustMRR tracks, and how we treated it

Source

TrustMRR is a public leaderboard where founders self-report live revenue via connected payment providers (Stripe, RevenueCat, Paddle, and others). This snapshot captures 1,000 listed startups as they stood on 30 Jul 2026.

Fields we drew on

- Financials — revenue_30d / 3m / 12m / all-time, mrr_usd, mrr_growth_30d_pct
- Firmographics — category, country, audience_type (B2B / B2C), payment_provider
- Positioning — value_proposition, problem_solved, pricing_model, target_persona
- Signals — active_subscriptions, domain_rating, x_followers, on_sale / asking_price

Read this with care

- Self-reported. Founders opt in and connect their own payment API — figures are not independently audited.
- Positioning fields are sparse. Value proposition, problem solved, and pricing model are 28–36% blank.
- 274 rows carry no category tag — 114 of those are explicitly listed as “Stealth Company,” i.e. deliberately anonymized, not missing data.
- Revenue is heavily right-skewed. A handful of startups carry a large share of total MRR — medians, not means, drive our category comparisons.

Executive summary

The headline read on 1,000 tracked startups

\$13.47M

total tracked MRR

\$133.75M

total 12-month revenue

\$282

median MRR per startup

25.5%

of startups are B2B—yet earn 62% of
B2B+B2C MRR

197

startups tagged AI—the single largest
category

74%

of tracked MRR sits in US-based startups

Category landscape: volume vs. revenue diverge

AI leads on startup count, but Education and Marketing earn more per company

Startups by category (count)

Total MRR by category (USD)

Revenue is geographically concentrated

The US holds 26% of startups but roughly 74% of all tracked MRR

Reading the gap

- France is the clear #2 by startup count (79) but its total MRR (\$894K) is a fraction of the US figure.
- Revenue per startup swings by market: Singapore's 9 startups post a \$2,126 median MRR, while India's 59 sit near \$6 — mostly pre-traction.
- 65 countries appear in total, but the top 4 alone (US, FR, CA, GB) account for over 90% of tracked MRR.

B2B is rarer, but monetizes far harder

255 B2B startups out-earn 401 B2C startups in total MRR, with 5.7x the median

Who’s fastest to revenue: the top earners

Ranked by 12-month revenue, tracked against the last 30 days and 3 months

#	Startup	Category	Country	Rev. 30d	Rev. 3m	Rev. 12m
1	Stan	Creator tools*	US	\$2.84M	\$0	\$25.02M
2	Brand On Demand, Inc.	E-comm	US	\$0.98M	\$2.99M	\$10.64M
3	Stack Influence	Marketing	US	\$0.87M	\$2.37M	\$10.52M
4	Stealth Company (anonymized)	—	—	\$0.86M	\$1.10M	\$4.92M
5	Comp AI	AI	US	\$0.58M	\$1.65M	\$3.94M

**value_proposition / problem_solved not populated for this record. “Stealth Company” is a real, anonymized listing (114 rows share this label).*

Takeaway: the same three named startups (Stan, Brand On Demand, Stack Influence) top every revenue window — US-based, and none are pure “AI” category.

Fastest-growing MRR in the last 30 days

Named startups with MRR above \$1,000, ranked by mrr_growth_30d_pct

One unnamed “Stealth Company” record shows +12,983% growth off a low base and is excluded here to keep the chart legible — flagged separately as a data outlier, not a trend.

How these startups position and price themselves

Based on the ~65% of records with stated pricing and positioning text

● **52.7%**

mention a free tier or free trial

● **44.9%**

bill on a monthly or yearly cycle

● **12.5%**

offer one-time / lifetime pricing

Recurring language in value propositions

“AI-powered,” “real-time,” “transform,” “instantly,” and “generate” dominate — most pitches are automation and content/video generation stories, not new-category creation.

Who they say they're built for

Target personas cluster around creators, teams, agencies, developers, and founders — B2B-flavored language even in nominally B2C listings, reinforcing the B2B revenue premium seen earlier.

Key takeaways

1

Revenue is winner-take-most: a handful of named startups (Stan, Brand On Demand, Stack Influence) anchor the top of every revenue window, 30-day through 12-month.

2

Category size and category earnings are different stories — AI has the most startups (197) but Education and Marketing carry higher median MRR.

3

Geography is lopsided: the US alone holds roughly three-quarters of all tracked MRR despite being a quarter of the listings.

4

B2B is the smaller but stronger segment — fewer startups (255 vs. 401 B2C), yet a 5.7x higher median MRR.

5

Freemium is the default motion (53% of stated pricing models), and positioning language is dominated by AI-powered automation and content-generation framing.

6

Treat this as a self-reported, partially-populated leaderboard, not a census — roughly a third of positioning fields are blank, and 274 rows are unclassified or intentionally anonymized.
