

The Verified Startup Index: Aggregate Alpha

Total Tracked Entities

16

Primary Sectors Tracked

Peak Vertical Growth

41.2%

(Games)

Peak Unit Economics

\$105.67

Rev / Subscription (Dev Tools)

While market sentiment overwhelmingly prices AI as the premier growth vector, underlying unit economics reveal that **capital efficiency** and **MRR quality** are currently **concentrated** in **contrarian**, low-hype sectors like Dev Tools and specialized E-commerce.

Index Composition by Volume

Dev Tools and Education Dominate the Quality Screen

The Chasers

Velocity Metrics Isolate Games and Marketplace as Breakout Verticals

Analytical Deduction

While Games and Marketplace are accelerating fastest, they are growing from lower median revenue bases (\$18,053 and \$15,965 respectively) compared to the mature cash-flow bases of Education or Dev Tools. This isolates them purely as momentum plays.

Top-of-Funnel Scale vs. High-Intent Subscription Pools

Monetization Efficiency: Isolating the True Cash-Flow Engines

The Alpha Cohort

Dev Tools: \$105.67 Rev/Sub | \$0.90 Rev/Visitor

Unparalleled pricing power and extraction efficiency. Every subscriber yields over \$100.

Enterprise Quality

SaaS: \$72.29 Rev/Sub | \$3.96 Rev/Visitor

Lower total subscriber volume is offset by premium B2B price points and exceptional per-visitor value.

Volume Dependent

Education (\$23.23) & Games (\$32.24) Rev/Sub

These sectors rely on massive scale to generate meaningful revenue, capping capital efficiency.

The Market Debate: Scale vs. Quality in AI and SaaS

Spotlight on Top 20% Outliers: Micro-Level Alpha

STAN

B2C Creator Monetization | Domain Rating: 89

30-Day Rev	MRR	Active Subs
\$2,844,652	\$3,569,654	101,590

Calculated Efficiency:
\$28.00 Rev/Sub | \$1.25 Rev/Visitor

Investment Thesis:

Unprecedented market penetration. Stan has successfully monopolized the link-in-bio monetization space, converting massive creator audiences into locked-in recurring revenue.

SUPLIFUL

B2B Infrastructure | Domain Rating: 71

30-Day Rev	MRR	Active Subs
\$984,522	\$187,459	3,631

Calculated Efficiency:
\$271.14 Rev/Sub | \$0.19 Rev/Visitor

Investment Thesis:

The ultimate picks-and-shovels play. By solving complex inventory logistics for brand builders, Supliful commands elite B2B pricing power and massive lifetime value per subscriber.

Capital Deployment Playbook: Strategic Recommendations

The Yield Play (Dev Tools & SaaS)

Action: Overweight capital allocation into developer infrastructure and B2B SaaS.

Data Justification: Optimize for capital efficiency. These sectors demonstrate peak MRR ratios (>0.90) and the highest Revenue per Subscription (up to \$105), ensuring fast payback periods and defensible cash flow.

The Growth Play (Games & Marketplaces)

Action: Target specific seed-stage viral platforms for momentum capture.

Data Justification: Deploy speculative capital here to capture the ~30-41% median revenue growth rates. Screen heavily for visitor-to-subscriber conversion infrastructure, as top-of-funnel traffic is abundant but retention is the core risk.

The Contrarian Play (Select AI Infrastructure)

Action: Avoid generic AI application layers; hunt for AI workflow automation.

Data Justification: The AI application layer is saturated (35 tracked entities) with poor pricing power (\$40 Rev/Sub). Capital should bypass the wrapper layer and target foundational tools that exhibit SaaS-like retention metrics.
