

A DATA STORY

Inside TrustMRR

What 1,000 Stripe-verified startups reveal about
the build-in-public economy

1,000-row TrustMRR dataset · Frozen 30 Jul 2026

What TrustMRR actually does

Launched by indie founder Marc Lou in late 2025, TrustMRR is a public database of software startups that connect a read-only API key from their payment provider to prove real revenue — replacing the era of screenshotted, unverifiable “MRR flexes.”

Verified revenue

MRR and revenue history are pulled directly from Stripe, RevenueCat, Polar, Lemon Squeezy and more — not self-reported.

Discovery & benchmarking

Founders, investors and analysts browse live categories, growth rates and rankings to study what's working.

Acquisition marketplace

Startups can list themselves for sale with an asking price and revenue multiple — turning the leaderboard into a deal-flow feed.

200K+ monthly visitors · Revenue verified hourly · Free to list

The metrics behind every listing

- **MRR**

Monthly Recurring Revenue — the subscription run-rate at a point in time.

- **Revenue 30d / 3m / 12m**

Actual revenue collected over the trailing period, not projected.

- **All-time revenue**

Lifetime revenue since the startup started tracking on TrustMRR.

- **Growth 30d %**

Month-over-month change in revenue or MRR.

- **Active subscriptions**

Count of currently paying, non-churned customers.

- **Revenue multiple**

Asking price ÷ annualized revenue, for startups listed for sale.

- **Domain rating**

Backlink-based authority score (0–100) for the startup's website.

- **Audience type**

Whether the customer base is B2B, B2C, or both.

AI leads every category — by a wide margin

197

AI startups on TrustMRR — nearly 1 in 5 of the whole dataset.

AI's \$2.36M in 30-day revenue is 79% higher than Marketing, the No. 2 category — and more than 6x Health & Fitness. Marketing and E-comm punch above their startup counts (42 and 19 startups), suggesting fewer but higher-revenue plays.

A US-anchored, globally distributed base

63%

of tracked 30-day revenue comes from US-based startups.

France and the UK form a clear second tier, each with far more listed startups than revenue share would suggest — a long tail of smaller, early-stage builders. Hong Kong and Singapore round out the top six despite small startup counts, hinting at a few large earners each.

Stripe is the backbone of “verified”

86.7%

of all 30-day revenue on the platform flows through Stripe alone.

RevenueCat is a distant second, concentrated among mobile-subscription apps. A small but growing slice of startups stack two providers (e.g. Polar + Stripe) — an early signal of founders diversifying payment infrastructure, not just verification.

Fewer B2B startups, far bigger checks

B2B startups make up just a quarter of listings but post a median MRR roughly 5.7x higher than B2C — fewer companies, but each with meaningfully deeper recurring revenue.

ACQUISITIONS

1 in 4 startups is already for sale

TrustMRR has quietly become an acquisition marketplace as much as a leaderboard — verified revenue doubles as a ready-made due-diligence packet for buyers.

262

Startups listed for sale (26.2%)

What the numbers say

1

Verification concentrates around one rail.

Stripe underwrites 87% of tracked revenue — “verified” today largely means “Stripe-verified.”

2

AI is the platform's center of gravity.

The single largest category by both startup count and revenue, well ahead of Marketing and E-comm.

3

B2B is smaller but richer.

A quarter of the base, yet median MRR nearly 6x that of B2C listings.

4

The leaderboard is becoming a marketplace.

26% of startups are actively for sale at a median 2.3x revenue multiple.
