founders on the
ledger

\$13,471 a month, for every
single startup
That's the average. A solid,
comfortable business, for
everyone.

Nobody actually gets that. Here's what they get instead.

The real floor

That's the median monthly revenue across all 1,000 startups we tracked, the exact middle of the pack, ranked by revenue.

Not the average. Not the outliers. Just the typical outcome: enough to cover a coffee habit, not enough to quit a job. And some earn nothing at all.

\$282

the median startup

Ranked dead center among 1,000 startups by monthly revenue.

One in five earns nothing

197 of 1,000 startups on this leaderboard bring in \$0 a month right now. That's not necessarily failure. Some are brand new, others between pivots.

But it means one-fifth of everyone here is standing at zero. Of the rest, how many are actually growing?

19.7%

197 of 1,000 tracked startups earn \$0 a month right now.

Based on 1,000 startups tracked on the leaderboard.

Stuck in neutral

Measured month-over-month among startups with growth history, 42.7% stay flat. Only 30.7% grow and 26.7% shrink. Most startups, most months, simply sit still. So who breaks out of neutral? It starts with which door they walked through.

Where startups land each month

AI is the most crowded category but not the most lucrative

AI holds 197 of 1,000 startups, nearly 1 in 5. Its average revenue (\$9,167) looks strong, but a few breakout companies skew that number. The median is just \$446/month. Crowded doesn't mean lucrative.

B2B customers pay 5.7x more than B2C

\$181

Median MRR selling to individual consumers
B2C startups

\$352

Median MRR selling to both audiences
Blended startups

\$1,036

Median MRR selling to businesses
B2B startups

Here's a second lever nobody talks about as much.

Being loud

Social followers barely move revenue
Correlation to revenue: 0.29 — weak
Attention isn't intent

- 1 . Followers show reach, not buying signal
- 2 . Loud doesn't mean chosen

Being findable

Domain Rating strongly tracks revenue
Correlation to revenue: 0.51 — nearly double
Findability compounds, loudness fades

- 1 . Search trust converts intent into revenue
- 2 . Being found beats being seen

\$3.57M/month. Stan alone earns
26.5% of all revenue across 1,000
startups.

● Stan ○ Other 999 ...

What happens when founders decide to sell?

Right now

The exit door

262 of 1,000 startups are listed for sale

\$35K median ask, 2.3x revenue

0 link between growth speed and price

The recap

- Median founder earns \$282/month
- 1 in 5 startups earn \$0
- 70% are flat or shrinking
- AI is the most crowded category, not the best-paying

- B2B earns 5.7x B2C at the median
- Findability beats social following
- Stan alone is 26.5% of all revenue
- 1 in 4 startups is for sale, near 2.3x revenue

This is a **power law**: not everyone wins, but winners share visible traits.
