

TrustMRR: What 1,000 Startups Reveal

A data-driven analysis of verified startup revenue, growth, pricing, and exit signals — with clear conclusions, not open questions.

Startup Analytics

What Is TrustMRR?

1,000 Startups

Verified, real-world data — no estimates

4 Core Fields

Revenue · Growth · Pricing · Exit signals

Why It Matters

Rare benchmark-grade startup dataset

AI Dominates — and It's Not Close

AI / ML leads with 280 startups

AI captures **28% of the dataset** — nearly double E-Commerce. Capital and founder attention are overwhelmingly concentrated here.

Conclusion: AI is the dominant category — by a wide margin.

Most Startups Earn Under \$50K MRR

72% sit below \$50K MRR

MRR (Monthly Recurring Revenue) is the predictable income a subscription business earns each month. The vast majority are pre-scale — a massive growth gap separates early-stage from mature.

📌 **Conclusion:** Scale is the exception, not the norm.

High Growth Doesn't Mean High Revenue

Fastest-Growing Category

AI / ML — highest median growth rate across all segments

Highest-Revenue Category

SaaS — leads in absolute MRR despite slower growth

The Takeaway

Growth and revenue are not the same — invest accordingly

Fintech Commands the Highest Valuations

A **revenue multiple** shows how many times annual revenue a buyer pays at exit.

Fintech exits at **9× revenue** — more than double E-Commerce. Buyers pay a clear premium for regulated, high-margin models.

📌 **Conclusion:** Category choice directly shapes exit value.

Only 1 in 8 Startups Has Exit Signals

88% show no exit activity

Only **12%** display signals like M&A interest or investor outreach. Exit readiness is rare — and likely concentrated in the highest-revenue tier.

Conclusion: Most startups are not preparing for an exit.

The One Takeaway

AI Leads — But Scale Is Rare

AI dominates by volume; most startups stay small

Category Shapes Exit Value

Fintech earns 9× — category choice is strategic

Exit Readiness Is the Exception

Only 12% show exit signals — most are not preparing

📌 **Bottom line:** In TrustMRR, category, scale, and exit readiness separate leaders from the rest.
