

The market pays more for businesses that are *dying.*

1,000 listings scanned. 262 on the market. **One mispricing.**

Two numbers. Sellers show you the wrong one.

WHAT SELLERS LIST ON

MRR

A peak headline number. Easy to inflate, slow to update, and often months stale.

WHAT ACTUALLY MATTERS

Last 30 days

Live revenue. What the business actually earned while it sat on the market.

When these two disagree, the price should follow the live number. It doesn't.

Decline commands a *38% premium*.

44 listings earned nothing last month.

*They are still asking **\$4.43M.***

Based Labs AI

+ 39 more

still listed

The edge is one underwriting rule.

THE GENERALIST BUYER

Reads the headline MRR. Overpays for revenue that is already leaving.

3.3x

GRAYLINE

Underwrites on trailing 30-day revenue. Buys the mispriced survivors.

2.4x

Same market. Same listings. One discipline separates the overpay from the bargain.

A market that misprices risk
is a market you can buy *cheap*.

GRAYLINE MICRO-ACQUISITIONS

Raising a \$5M Fund I to acquire profitable micro-SaaS the market has mispriced.
