

A DATA STORY · CUSTOMER ECONOMICS

# Not All Customers Are Worth the Same

Revenue per customer swings 25x by category. Some businesses print money per user — others need volume just to survive.

# Pricing power isn't evenly spread

Median monthly revenue per active subscriber

**Sales tools earn \$103 per user a month. Health & Fitness apps earn \$4.** Same dataset, 25x apart.

# Charge more, or find more people

## THE VALUE PLAY

Sales tools

**\$103**

PER USER / MO

**23**

MEDIAN USERS

*A handful of customers who each pay a lot. Sell depth, not reach.*

## THE VOLUME PLAY

Health & Fitness apps

**\$4**

PER USER / MO

**90**

MEDIAN USERS

*A crowd who each pay a little. Sell reach, not depth — and it takes 4x the users to compete.*

## It mostly comes down to who's paying

### B2B CUSTOMERS

\$48.89

MEDIAN REVENUE PER USER / MO

### B2C CUSTOMERS

\$9.34

MEDIAN REVENUE PER USER / MO

**A B2B customer is worth 5.2x a B2C one.** The categories with pricing power (Sales, Marketing, SaaS) sell to businesses. The volume plays (Health & Fitness, Social Media) sell to individuals.

# Two honest paths, pick one on purpose

## 1 Selling to businesses buys pricing power

B2B customers pay 5x more. If margin matters more than reach, build for a business buyer.

## 2 Selling to consumers means winning on scale

Low ARPU categories only work with a plan to reach hundreds of users, not dozens.

## 3 The mistake is drifting between the two

Sales tools priced like a consumer app, or fitness apps priced like enterprise software, both underperform their category.
