

INVESTMENT THESIS

AI MICRO-SAAS

## Distribution Over Code

In low-barrier AI markets, distribution is the only durable competitive advantage.

# Why Audience Moats Dictate Winners in the AI Micro-SaaS Era

# The Micro-SaaS Landscape

The AI micro-SaaS market is changing fast.

Global Expansion

Stealth Surge

Product Saturation

# The Feature Trap

The prevailing assumption — that a technically superior product wins — is structurally broken in the AI wrapper era.

Code is Cheap

High Churn Risk

CAC Death Spiral

# The Data Proof: X/Twitter as the Primary Moat

The dataset shows a clear link between audience size and sustainable revenue.

**The Follower Divide:** This chart shows how startup audiences cluster across follower bands. The right side of the distribution is thin, which is why outsized founder reach can create a meaningful advantage.

## The Growth Equation:

Organic founder reach directly and measurably correlates with sustainable MRR. Distribution is not a nice-to-have — it is the primary growth engine.

# Investor Screening Framework

Given the structural evidence, this framework reweights diligence toward distribution-first signals for AI micro-SaaS.

## Distribution

Screen for founder reach before product depth.

Check whether the founder can reliably create attention without paid spend. Strong reach often shortens the path to first customers.

## Community

Prefer founders launching into audiences they already own.

Look for an existing newsletter, social following, or niche user base. Owned communities reduce launch risk and improve early conversion.

## Geography

Look for capital-efficient teams outside high-cost hubs.

Lower operating costs can extend runway and improve resilience. Favor markets where talent and burn are naturally more efficient.

# Investment Thesis & Action Plan

Audience ownership is the only asset that cannot be copied overnight.

Allocate capital toward founders who already own attention and can convert it into durable distribution.

Audience ownership is the moat.
