

STARTUP ACQUISITION MARKET SCAN

TrustMRR 1,000-Startup Dataset: Where to Deploy Acquisition Capital

A board-level briefing on the 262 startups currently for sale, where valuations are most attractive, and which targets merit a closer look.

A Fragmented Market With Real Pricing Gaps

The dataset covers 1,000 startups; 262 are actively for sale. Pricing is inconsistent across the market — several categories and individual companies are listed well below what their revenue would normally command. That gap is the opportunity.

Recommendation

Prioritize SaaS and select AI listings. SaaS is undervalued at a 1.2x median revenue multiple, and several AI, health & fitness, and cross-category targets combine strong recurring revenue with sub-2x pricing. Recommend the Board authorize due diligence on the four premier targets identified in this deck.

262

Startups actively for sale, out of 1,000 tracked

\$86.78M

Combined asking price across all active listings

\$20.47M

Combined trailing-12-month revenue on sale

Highly Fragmented, Concentrated in Five Countries

Top Countries by Startup Count

Why it matters for the Board

US-based targets dominate deal flow, giving the strongest legal and diligence familiarity. France and India offer a meaningfully sized secondary pool worth screening for currency and structuring advantages.

Top 10 Categories of Startups on Sale by Count and Avg Multiple

Top 10 categories on sale, by count and average revenue multiple.

AI and Mobile Apps lead on volume; SaaS leads on financial maturity (next slide).

AI: Highest Deal Flow, Still Reasonably Priced

54

Startups on sale — the single largest category, 20%+ of all listings

3.15x

Median revenue multiple — grounded despite AI hype

\$11.49M

Combined asking price across the AI sector

Read for the Board

AI's high listing volume creates a genuine buyer's market: proprietary technology and technical talent are available without the inflated premiums the broader AI narrative might suggest. This is a sourcing category, not a bargain-bin category — multiples are fair, not distressed.

Deep Discount AI Target — PROSP

\$128,005 MRR (\$507K trailing 12-month revenue), listed at \$1,000,000 — a rock-bottom 0.8x revenue multiple. Worth immediate diligence.

0.8x

Revenue multiple

\$1.0M

Asking price

SaaS: The Most Undervalued Cash-Flow Opportunity

\$14.51M

Combined asking price — the largest total value on the market, across 22 listings

\$18,365

Average monthly recurring revenue — the highest of any category

1.2x

Median revenue multiple — a steep discount to typical SaaS pricing

Read for the Board

SaaS carries fewer listings than AI or Mobile Apps, but is the most financially mature segment for sale: high-margin, recurring revenue, priced at roughly a third of typical market multiples. This points to a motivated-seller environment rather than weak businesses.

The Ultimate Scale Target — 1Lookup

The largest, most robust asset on the market: \$207,064 MRR (\$3.12M trailing 12-month revenue), listed at \$10,000,000.

2.1x

Revenue multiple

\$10.0M

Asking price

Isolating the Standout, High-MRR Outliers

What the chart shows

- Most listings cluster tightly in the lower-left — small, fairly priced businesses.
- A handful of outliers combine very high MRR with asking prices that don't scale proportionally — these are the highest-leverage acquisition candidates.
- 1Lookup and PROSP (detailed on the prior slides) sit furthest from the pack, offering the clearest top-line expansion for the capital required.

Four Companies Merit Immediate Diligence

Company	Sector	Revenue	Ask	Multiple	Why it matters
1Lookup	SaaS	\$207,064 MRR (\$3.12M / 12mo)	\$10,000,000	2.1x	Scale anchor — largest, most mature asset on the market.
PROSP	AI	\$128,005 MRR (\$507K / 12mo)	\$1,000,000	0.8x	Deepest discount in the dataset; exceptional bargain.
GoTall	Health & Fitness	\$58,510 MRR	\$1,000,000	1.6x	Cash-flowing, low overhead, immediate integration.
Taller	Health & Fitness	\$44,209 MRR	\$750,000	1.4x	Complements GoTall; low-cost entry into the vertical.

Highest Revenue-to-Ask Ratios Among Priced Listings

Filtered to active listings asking \$10,000+, ranked by annual revenue divided by asking price — the more revenue per dollar of purchase price, the faster capital is recovered.

Company	Sector	Country	Asking Price	Annual Revenue	Multiple	Rev-to-Ask
BuildMyAgent.io	Unknown	US	\$289,000	\$541,806	1.1x	1.87x
Videotok	AI	IT	\$75,000	\$137,149	0.9x	1.83x
Stealth Company	No-Code	Unknown	\$160,000	\$278,273	0.8x	1.74x
divinetalk	Social Media	BR	\$14,000	\$19,975	1.5x	1.43x
ColdSire	SaaS	US	\$215,000	\$303,017	1.1x	1.41x

Also notable: PolyPick (Fintech) is asking \$22,700 against \$20,654 in current MRR — a 0.1x revenue multiple, the lowest in the dataset, though smaller in absolute scale.

What This Scan Does Not Tell Us

1 Data is a point-in-time listing snapshot

Asking prices are seller-set, not verified valuations. Multiples reflect ask, not agreed deal terms — real close prices are typically lower.

2 Several fields are unlabeled

A number of the highest-ROI candidates show "Unknown" sector or country, so legal, tax, and operational review is needed before any offer.

3 Revenue quality is unverified

MRR and 12-month revenue figures have not been through financial due diligence — churn, customer concentration, and margin need independent confirmation.

4 Low multiples can also signal risk

A steep discount may reflect a motivated seller — or a business with real operational, technical, or market problems. Diligence should test which explanation applies.

Bottom line: these figures point to where to look first, not what to pay — every recommended target still requires standard financial and legal diligence.

RECOMMENDATION

Authorize Due Diligence on Four Targets

SaaS and select AI listings currently offer the strongest combination of recurring revenue and below-market pricing in this dataset. We recommend the Board approve financial and legal diligence on 1Lookup, PROSP, GoTall, and Taller as first-priority targets, with a second pass through the top five Revenue-to-Ask opportunities if capital allows.

- 1 Approve budget for financial & legal diligence on the four priority targets
- 2 Verify revenue and churn data directly with each seller
- 3 Return to the Board with binding offer terms within 30 days

\$12.75M

Combined asking price of the four priority targets

1.5x

Average revenue multiple across the four priority targets

~\$4.86M

Combined trailing 12-month revenue of priority targets
