

Where Should the Next Founder Build?

A data-driven playbook for choosing the right market, product, and business model.

INSIGHTS FROM 1,000 BOOTSTRAPPED STARTUPS

Every founder faces the same existential question: what should I build?

You are drowning in anecdotal advice and infinite possibilities. There are thousands of potential startup ideas, but only a fraction evolve into sustainable, cash-flowing businesses.

THE NOISE OF INFINITE IDEAS

Instead of opinion, we found the signal in the data of 1,000 global startups.

The dataset tracks markets, pricing models, payment infrastructure, and granular revenue distribution.

(United States)

AI dominates founder attention — but the crowd doesn't guarantee cash flow.

SaaS and AI alone attract more founders than the other three categories combined.

But does following the crowd guarantee cash flow?

High market volume does not translate to high revenue per startup.

THE CROWDED MAINSTREAM

AI

Productivity

THE UNDERSERVED GOLDMINES

Marketplace

Security

The best opportunities live in underserved, high-value niches.

Markets like Sales, Security, and Marketplaces are vastly underserved yet highly lucrative — generating 4x to 6x more revenue per startup than AI.

Subscription models completely dominate the capture of recurring revenue.

The data overwhelmingly supports building B2B software that charges monthly. One-time purchases and fragmented consumer apps struggle to compound value.

Monetisation infrastructure reveals the supremacy of web-based B2B businesses.

If you have to start building tomorrow, this is the data-backed recommendation.

THE THESIS

**Build a B2B SaaS tool
in Sales or Security.**

THE PARAMETERS

Market: Sales & Security (highest revenue per startup: ~\$43k–\$59k).

Customer: Small to Medium Enterprises (B2B).

Model: Recurring SaaS via Stripe.

THE “WHY”

- ✓ Highest revenue ceilings per founder.
- ✓ Significantly lower competition than AI or Productivity.
- ✓ Benefits from structural, recurring demand.

**Great startups do not begin with technology.
They begin with a market that is willing to pay**
