
1,000 startups. One brutal power law.

What the **TrustMRR** dataset actually tells us — a data story in three acts.

1,000 startups

29 signals each

\$13.4M total MRR

Meet the cast

TrustMRR is a marketplace where founders list their business for the world to browse — revenue verified live through Stripe, RevenueCat and friends. Every company here chose to show up. That's the world we're reading.

Read this as a self-selected slush pile — the mix of founders willing to list publicly — not a random sample of all startups.

The five most crowded categories

This is a power-law story, not a bell curve

Sort every company by revenue and a handful of protagonists carry the entire plot. The rest barely get a line.

1	Stan	\$3.57M / mo
2	Stealth Company	\$747K / mo
3	GojiberryAI	\$495K / mo

48% of every dollar in this dataset goes to just 10 companies out of 1,000.

The “average startup” doesn’t exist

MEDIAN MRR

\$282

what half of these startups make in a month — less than a decent phone bill.

MEAN MRR

\$13,472

what the average looks like once a few outliers walk into the room.

47x gap between mean and median — the single clearest sign this is a skewed, winner-heavy dataset, not a normal distribution.

Clout isn't cash

Not every metric that looks impressive on a profile actually predicts revenue. Here's what really moves the needle — and what's just noise.

0.90 — real customers paying real money. No surprise here.

0.49 — earned search authority tracks with revenue.

0.17 — a big following barely moves the needle.

Businesses pay. Consumers browse.

The median B2B company out-earns the median B2C company nearly 6 to 1 — even inside a dataset full of scrappy indie products.

5.7x

more median revenue for B2B vs. B2C

Median MRR by audience type (\$)

Less traffic, more money per click

Revenue-per-visitor and total visitor volume move in opposite directions (-0.46). The sites converting best per person aren't the ones going viral — they're the ones going deep.

-0.46

correlation between traffic and revenue-per-visitor — focus beats reach, dollar for dollar.

BROAD REACH

High traffic, low intent — revenue per visitor thins out.

NARROW FOCUS

Smaller, targeted audience — revenue per visitor climbs.

It's the steady ones that go up for sale

262 companies are listed for sale — and they aren't the flops or the superstars. They're the solid mid-list: proven enough to trust, not growing so fast that holding on beats selling.

\$1,055

median MRR of on-sale companies

\$187

median MRR of companies not for sale

~3.2x

typical asking price, as a multiple of
annual revenue

The billion-dollar outliers from Act I? Not one of them is listed. They're still writing their story.

```
~/trustmrr $ echo $MORAL_OF_THE_STORY
```

The moral of the story

- Build for a few, not the crowd — the top 10 out-earn the bottom 900 combined.
- Businesses pay more than consumers, every time this data was cut.
- Followers are a vanity metric. Subscribers and search authority are the real ones.
- Depth beats reach — niche products monetize their visitors better.

Caveat, in the spirit of full disclosure: this is a self-selected sample of founders willing to list publicly, with real gaps in traffic and pricing data. Treat it as one story TrustMRR tells — not the whole truth about startups everywhere.
