

TRUSTMRR DATASET · STRATEGIC INTELLIGENCE BRIEFING

What 1,000 tracked startups tell us about where to focus next

Scale, growth, concentration, segment mix, monetization, effort, whitespace, and risk — synthesized into a single prioritization view.

Prepared for senior management · Data frozen 30 Jul 2026

This briefing covers the full dataset, not one sector

Prior working sessions zoomed into individual sectors one at a time. This deck steps back to the full 1,000-company sample.

1

What we analyzed

All 1,000 companies tracked in TrustMRR — every category, every geography — not a single-sector cut.

2

Why it's different

Offers holistic, cross-sector view to support strategic planning

3

How to read it

Every chart in this deck is built from the full 1,000-row sample unless a slide explicitly says otherwise.

A NOTE ON THE SAMPLE

Figures are self-reported by founders on TrustMRR and frozen at a point in time. Treat this as directional market intelligence for internal planning — not audited financial data.

The market is large, top-heavy, and unevenly understood

\$13.5M

Total tracked MRR

Across 1,000 companies — but the median company earns just \$282/mo.

48%

Held by the top 10

One company (Stan) alone accounts for over a quarter of all tracked revenue.

31%

Growing month over month

43% are flat, 27% are shrinking — growth is the exception, not the norm.

29%

Missing audience data

288 of 1,000 companies have no B2B/B2C label — a real gap for segmentation work.

A handful of companies carry the dataset

Top 10 companies by monthly recurring revenue (USD)

TOTAL TRACKED MRR

\$13.47M

MEDIAN COMPANY MRR

\$282

vs. \$13,472 mean — heavily skewed

LARGEST SINGLE COMPANY

\$3.57M

Stan — 26.5% of all tracked MRR

Note: three of the top ten are anonymized “Stealth Company” listings — real names withheld in source data.

Growth is real, but it's a minority behavior

30-day MRR growth across all companies with reported data (n=893)

Share of companies growing, by category

Revenue is a power law, not a bell curve

Cumulative share of total MRR by company rank

TOP 10 COMPANIES

48.0%

of all tracked MRR

TOP 100 COMPANIES

81.8%

of all tracked MRR

BOTTOM 900 COMPANIES

18.2%

share the remaining fifth

The audience is mixed — and a third is unlabeled

Audience type (n=1,000)

Top categories by company count

Not all categories monetize the same way

Median MRR by category — the clearest proxy for willingness to pay

PAYMENT RAIL OF CHOICE

Stripe

63.6% of all companies use it

REVENUE / VISITOR (MEDIAN)

\$0.40

most funnels convert poorly

FOR-SALE ASKING VALUE

\$86.8M

262 companies, all categories

Where competing is easy vs. where it's expensive

Median domain rating by category — a proxy for the SEO/product moat you'd need to build to compete

HOW TO READ THIS

Low domain rating (green) = less established competition — easier to break into with modest engineering investment.

High domain rating (Social Media, Analytics) = incumbents have real SEO/product moats — expect a longer, costlier build to compete.

Education, Productivity, and Mobile Apps are the cheapest categories to enter on this proxy.

Where scale, growth, and real deal activity line up

Categories ranked by a composite of monetization, growth, and market validation

CATEGORY	MEDIAN MRR	% GROWING	FOR-SALE COMPS	READ
Marketing	\$1,586	47.6%	9	Best all-round: pays well, growing, liquid
Dev Tools	\$185	54.3%	8	Fastest growth, but low revenue per company
Education	\$2,142	—	10	Highest revenue, flat growth, deep deal flow
Analytics	\$1,294	—	7	Strong monetization, thin sample (n=19)
AI	\$446	25.8%	54	Massive deal volume, but weak median economics

“For-sale comps” = companies in that category currently listed with an asking price on TrustMRR.

The crowded category isn't the best-paying one

Company count vs. median MRR — categories in the upper-left are underbuilt relative to what they pay

Median MRR →

WHITESPACE READ

Analytics, Social Media, Content Creation, Marketing, and Education (gold dots) pay well and have relatively few competitors.

AI has the opposite profile: 197 companies chasing a median of just \$446 — the most crowded, least differentiated category in the sample.

The whitespace is in the categories everyone is ignoring in favor of AI.

What could make this analysis misleading

Extreme concentration

One company (Stan) is 26.5% of total MRR — category-level averages are easily distorted by single outliers.

Missing segment data

288 of 1,000 companies (29%) have no audience-type label — segment-mix conclusions are directional, not exact.

Anonymized top performers

3 of the top 10 companies by MRR are unnamed “Stealth Company” listings — limits due diligence on the biggest movers.

Sparse fields across the board

284 companies are missing a value proposition and 343 are missing a pricing model — gaps in the qualitative picture.

Self-reported, unaudited

All figures come from founders on TrustMRR and are frozen at 30 Jul 2026 — treat as directional, not financial-grade.

Domain rating is a proxy, not a moat

“Developer effort” here is inferred from SEO authority — real build cost may differ substantially by category.

Monetization potential vs. effort to compete

Plotting median MRR (pays well →) against median domain rating (harder to compete →)

High priority

Pays well, low effort — Education, Marketing

Invest selectively

Pays well but competitive — Analytics, Content, Social

Opportunistic

Crowded, weaker economics — AI, SaaS

Deprioritize

Low pay, low differentiation — Mobile, Productivity

Where to spend the next two quarters

NOW

- Prioritize Education & Marketing — best monetization-to-effort ratio in the dataset
- Fix the audience-type gap: 29% of records are unlabeled and blocking segmentation work

NEXT

- Selectively invest in Analytics, Content Creation, Social Media — strong pay, moderate competition
- Build a repeatable diligence checklist for anonymized “Stealth Company” listings

LATER

- Revisit AI opportunistically — largest deal volume but weakest median economics
- Deprioritize Mobile Apps and Productivity unless a specific high-MRR outlier justifies it

THANK YOU

Questions & discussion
