

# Sourcing Signal: The TrustMRR Pipeline

What 1,000 Verified Startups Reveal  
About Buying Indie SaaS.

An investor's read of the TrustMRR  
dataset — 1,000 companies, verified  
revenue, live acquisition listings.

Prepared by  
Devyani Mehta |  
5 August 2026 |  
Source: [trustmrr.com](https://trustmrr.com)

# The Brief: From Leaderboard to Deal Feed

TrustMRR began as a public leaderboard for verified startup revenue. Read differently, it's something more useful to an investor: a continuously updated feed of small, cash-flow-backed software businesses — a quarter of which are already for sale.

1,000

Tracked — Verified startups in this frozen snapshot.

262 (26%)

Listed — Actively for sale on the platform right now.

\$35K

Ask — Median asking price across all active listings.

# Why This Data Is Investable: The Verification Flow

Verified, not claimed.

Founders connect a read-only Stripe, RevenueCat, Polar, or Paddle key.

Traces back to real payment data, not self-reported numbers.

Fully de-duplicated.

All **1,000** rows trace to one canonical TrustMRR profile (trustmrr:<slug>).

No merged spreadsheets or conflicting versions.

Updated continuously.

This specific snapshot is frozen **30 Jul 2026**, but the live source refreshes hourly for re-verification up to an offer.

Live comps.

**262 companies** are listed with real asking prices and revenue multiples, not hypothetical valuation math.

# The Market Map: Where Revenue Actually Concentrates

## Reading the Map:

AI has the most companies (197) but among the lowest revenue per company.

Education, Marketing, and Analytics have far fewer entrants and much stronger per-company economics — a healthier hunting ground for a buyer.

Productivity is both crowded (49 companies) and weak (\$42 median).

# The Power-Law Reality of Indie SaaS

**Implication: Never benchmark a target against the dataset average. Screen every company on its own trailing numbers.**

# What Actually Predicts Value (Correlation with MRR)

Subscribers and recent revenue predict MRR; followers and SEO barely matter.

Score targets solely on active subscribers and recent revenue ( $r \geq 0.85$  with MRR) — not followers or domain rating ( $r \leq 0.22$ ).

# Scale vs. Momentum: Two Different Games

$r = 0.03$  (Correlation between company size and monthly growth rate).

|                                                                                                                                                                                                                                  |  | <div><div><b>Small ≠ Weak.</b></div><div>Some of the smallest companies are growing 100%+ in a single month. A modest MRR can still be the earliest, cheapest entry point into real momentum.</div></div> |  |
|                                                                                                                                                                                                                                  |  |                                                                                                                                                                                                           |  |

Momentum (Trailing Monthly Growth Rate)

# The Deal Pipeline: 262 Listings, Right Now

## Pricing Rulers Module

Typical revenue multiple: 1.7x – 6.0x, median 3.0x.

(Excluding listings priced at a 0.0x multiple — typically pre-revenue businesses sold for their audience, code, or domain rather than cash flow.)

**Directive: Use this range as your fair-price ruler when a target's ask looks out of line.**

# Algorithmic Sourcing: The 4-Part Framework

262 Active Listings

**Filter 1: Category Momentum.** Prioritize categories with real per-company economics (**Education, Marketing, Analytics, Sales**) over crowded, low-yield ones (**AI, Productivity**).

**Filter 2: Traction Quality.** Score strictly on active subscribers and recent revenue ( $r \geq 0.85$ ) — ignore followers/DR.

**Filter 3: Growth Persistence.** Require growth across  $>1$  trailing window (30-day AND 3-month) to filter out single-month spikes.

**Filter 4: Price Discipline.**  
Favor listings priced at or below the category-adjusted multiple ( $\sim 3.0x$  median) relative to growth.

Executable  
Shortlist

# Executable Pipeline: 7 Shortlisted Candidates

 **Applied Screen:** For sale · sub-2.5x multiple · >5% monthly MRR growth · \$3K+ MRR. *(Note: Screening criteria are illustrative — treat this as a starting shortlist for deeper diligence, not final valuations.)*

| Startup            | Category  | MRR      | 30-Day Growth | Ask         | Multiple |
|--------------------|-----------|----------|---------------|-------------|----------|
| Kickly – Pronos IA | Games     | \$10,236 | +384.5%       | \$100,000   | 0.7x     |
| SetSmart           | SaaS      | \$15,659 | +100.0%       | \$499,000   | 0.8x     |
| Leadbomb           | SaaS      | \$3,633  | +38.9%        | \$25,000    | 0.6x     |
| Stealth Company    | –         | \$36,627 | +22.7%        | \$1,000,000 | 2.4x     |
| Groups Watcher     | Marketing | \$21,423 | +19.7%        | \$500,000   | 2.2x     |
| Stealth Company    | –         | \$10,048 | +7.1%         | \$300,000   | 1.0x     |
| Backlinker AI      | Marketing | \$26,950 | +5.3%         | \$350,000   | 1.3x     |

# Risk Factors & Diligence Blindspots

## Stealth Obfuscation.

129 rows (13%) hide the website category entirely — expect meaningful extra diligence before you know what you're buying.

## Frozen Snapshots

No trend history is included in this static view. Re-pull the live, hourly-updated source to confirm growth is real and not a single good month.

## Self-Reported Descriptive Data.

Pricing, persona, and positioning text are free-form and inconsistently filled in — verify these claims independently, don't take them at face value.

## Geographic Sample Bias.

The sample reflects TrustMRR's community, not the global market. US (34%) and France (8%) are heavily overrepresented — this is not a random cross-section.

# Execution: Recommendations & Next Steps

1,000 companies. 262 for sale. Four filters get you from noise to a working shortlist.
