

Sector Positioning and Portfolio Exposure

Book of 1,000 revenue verified assets, frozen 30 July 2026. Converted at Rs 95.50 per USD, spot on freeze date. TTM is August 2025 to July 2026.

ASSETS	MRR	REVENUE TTM	ARR RUN-RATE	ASSETS GROWING	UNTAGGED MRR
1,000	Rs 129 cr	Rs 1,277 cr	Rs 1,544 cr	34%	56.5%
30 Jul 2026	Jul 2026	Aug 25 to Jul 26	Jul 2026 MRR x 12	30 days to 30 Jul 26	274 assets

One asset in a thousand carries a quarter of our recurring revenue

Cumulative share of book MRR by asset, ranked highest first. Jul 2026. Source: frozen 1,000 asset book, 30 July 2026. Figures in Rs crore at Rs 95.50 per USD.

WHAT IT SHOWS

Ten assets produce 48 percent of MRR and one hundred produce 82 percent. The curve is flat from roughly the four hundredth asset onward.

WHAT IS SURPRISING

The bottom 600 assets contribute Rs 0.83 cr between them, 0.6 percent of MRR, while carrying the full custody, compliance and reporting load of the other 400.

WHAT FOLLOWS

The book is not diversified, it is merely long. **Single-name exposure has no stated limit and one asset now sits at 26.5 percent.**

The 401 assets we own most of earn a sixth of what the 255 we own least of earn

Monthly revenue per active subscription by audience type. Jul 2026. Source: frozen 1,000 asset book, 30 July 2026. Figures in Rs crore at Rs 95.50 per USD.

WHAT IT SHOWS

B2B assets earn Rs 7,929 per subscription per month against Rs 1,243 for B2C, on a median domain rating of 17 against 7. B2C is 401 assets and Rs 19.5 cr of MRR.

WHAT IS SURPRISING

The book was assembled toward the low yield end. B2C carries 40 percent of the assets and 15 percent of MRR, and is listed for sale more often than B2B, 31 percent against 25 percent.

WHAT FOLLOWS

Acquisition has been chasing count rather than yield. **A 6.4x yield gap of this size is a selection rule, not a market condition.**

Where we are big, we are pale on everything that compounds

Sixteen sectors with twelve or more assets, ranked by MRR. Shading is by rank within these sectors. Jul 2026 unless stated. Source: frozen 1,000 asset book, 30 July 2026. Figures in Rs crore at Rs 95.50 per USD.

	Share of book MRR	Share of TTM revenue	Yield Rs/sub/mo	Net momentum pp, Jul 2026	Moat median DR	Recurring ARR / TTM	Sale pressure percent listed
AI (197)	13.4%	13.8%	3,736	-5	12	1.18x	27%
SaaS (66)	4.4%	4.9%	6,093	+6	12	1.08x	33%
Education (30)	3.9%	4.1%	3,008	+0	8	1.14x	33%
Marketing (42)	3.3%	10.9%	11,395	+10	18	0.36x	21%
E-comm (19)	2.9%	9.0%	5,476	+16	18	0.40x	32%
Analytics (19)	2.7%	2.8%	8,316	+32	20	1.15x	37%
Social Media (18)	2.3%	1.1%	2,016	+11	31	2.42x	28%
Mobile Apps (52)	1.5%	1.2%	782	-27	3	1.47x	56%
Content Creation (36)	1.5%	1.4%	3,153	-6	19	1.30x	31%
Health & Fitness (34)	1.3%	0.8%	396	+12	14	1.81x	29%
Dev Tools (37)	0.9%	0.9%	2,560	+32	17	1.26x	22%
Fintech (16)	0.5%	0.5%	2,433	-6	8	1.36x	31%
Productivity (49)	0.5%	0.5%	1,256	+2	3	1.21x	16%
Sales (13)	0.5%	0.4%	13,975	-8	3	1.62x	31%

Real Estate (12)	0.2%	0.2%	3,232	-17	2	1.23x	17%

Less favourable  More favourable

Sale pressure is inverted: heavier listing reads as less favourable. Asset count in brackets.

WHAT IT SHOWS

Our two largest tagged positions, AI and SaaS, shade dark only in the first two columns, which measure size. On yield, moat, momentum and recurring quality they sit at or below the middle of the table.

WHAT IS SURPRISING

The strongest columns belong to sectors we barely hold. Social media carries the highest moat at 31, analytics the second at 20, and developer tools the strongest momentum at plus 32, and together they are 4 percent of MRR.

WHAT FOLLOWS

Size has been mistaken for strength. **Marketing and E-comm are the exception worth protecting: high yield, real moat, and 20 percent of TTM revenue between them.**

Sixteen sectors, one clear place to add and one clear place to stop

Sector attractiveness against our relative strength, both scored 0 to 100 within the sixteen sectors. Bubble area is TTM revenue, Aug 2025 to Jul 2026, largest is AI at Rs 176 cr. Source: frozen 1,000 asset book, 30 July 2026. Figures in Rs crore at Rs 95.50 per USD.

WHAT IT SHOWS

Developer tools and analytics sit right of centre and below the diagonal: the market rewards them and we are light. AI sits at the top left, our heaviest position in a sector scoring 52 on attractiveness.

WHAT IS SURPRISING

The largest bubble on the chart, AI at Rs 176 cr of TTM revenue, is the one furthest from where it should be. Marketing and E-comm, at Rs 140 cr and Rs 115 cr, are the only large bubbles correctly placed.

WHAT FOLLOWS

The reallocation is small in count and large in effect. **Two sectors to build, one to reduce, and four already correctly held.**

Revenue is up thirty percent on the year and almost none of it is broad

Monthly revenue indexed to the TTM monthly average. 747 assets reporting all three windows, 76 percent of book TTM revenue. Source: frozen 1,000 asset book, 30 July 2026. Figures in Rs crore at Rs 95.50 per USD.

WHAT IT SHOWS

Monthly revenue rose from Rs 81 cr on the TTM average to Rs 106 cr in July 2026. AI led the largest sectors at 153 on the index, against SaaS at 131, analytics at 118 and education at 96.

WHAT IS SURPRISING

AI's rise is five assets. They produced 64 percent of the sector's July revenue while 40 percent of the other 192 shrank. The sector grew without most of it growing.

WHAT FOLLOWS

The trend line flatters us. **Growth in the book is a small number of names, and the index will turn the month any one of them stops.**

Only a third of the book grew in the month to 30 July 2026

Share of assets growing, flat, and shrinking on 30 day revenue. Sectors ranked by share growing. Source: frozen 1,000 asset book, 30 July 2026. Figures in Rs crore at Rs 95.50 per USD.

WHAT IT SHOWS

34 percent of assets grew, 30 percent were flat and 34 percent shrank. Developer tools and analytics lead on breadth at 57 and 53 percent growing.

WHAT IS SURPRISING

Design tools recorded no growing asset at all, and half of mobile apps shrank. Both sectors are still carried at full weight.

WHAT FOLLOWS

Breadth, not level, is the honest measure here. **The two sectors we are lightest in are the two where most assets are moving the right way.**

Developer tools and analytics are the only sectors where the market is ahead of us

Our relative strength (dot) against sector attractiveness (arrow head), both 0 to 100, ranked by gap. An arrow pointing right means the market scores better than our position. Jul 2026. Source: frozen 1,000 asset book, 30 July 2026. Figures in Rs crore at Rs 95.50 per USD.

WHAT IT SHOWS

Twelve of sixteen arrows point left, meaning we hold more weight than the sector merits. AI is the longest at minus 39, then mobile apps at minus 33 and education at minus 31.

WHAT IS SURPRISING

Only two sectors clear both tests of being genuinely attractive and genuinely underheld: developer tools at plus 26 and analytics at plus 18. Real estate and design tools show positive gaps too, but that is weakness against weakness, not opportunity.

WHAT FOLLOWS

The whitespace is narrow and specific. **Developer tools costs a median 1.35x, the cheapest entry in the book, and grew in 57 percent of its assets last month.**

Education at minus 31 is a different case from AI: Rs 5.0 cr of MRR on a median domain rating of 7.5 and a 4.0x median multiple, which is a reasonable position acquired at an unreasonable price. It should be harvested rather than exited.

Our own asking prices are highest where growth has already stopped

Median revenue multiple on our listings against net momentum, by sector. Bubble area is MRR. 30 Jul 2026. Source: frozen 1,000 asset book, 30 July 2026. Figures in Rs crore at Rs 95.50 per USD.

WHAT IT SHOWS

Sales is listed at 6.4x with momentum of minus 8, education at 4.0x with momentum of zero, and AI at 3.15x with momentum of minus 5. Developer tools, the fastest growing sector in the book, is listed at 1.35x.

WHAT IS SURPRISING

We are asking a premium for the assets the data says are slowing, and discounting the ones it says are working. Of Rs 829 cr of listed asks across 262 assets, ten listings carry 42 percent.

WHAT FOLLOWS

Pricing is being set by hope rather than by performance. **The listed book will not clear at these levels and should not be carried at them.**

What we are asking the Board to do

TO NOTICE

- Single-name concentration.** One asset is 26.5 percent of MRR and there is no stated limit on single-asset exposure.
- The tail is not free.** 599 assets earn under Rs 1 lakh a month each, Rs 0.82 cr in aggregate, on the same overhead as the rest.
- Half the revenue is outside the sector view.** 274 untagged assets hold 56.5 percent of MRR. Every judgement on these pages is taken against the remainder.

TO DECIDE

- Whether to keep adding AI at 3.15x.** 19.7 percent of the book by count, 13.4 percent of MRR, and growth concentrated in five names. The same capital buys developer tools at 1.35x with 57 percent of assets growing.
- Whether MRR remains the basis of carrying value.** At a median 1.42x ARR to TTM, an MRR based mark overstates realised earnings on nearly half the book.

TO APPROVE

- A disposal programme covering mobile apps and the zero revenue tail,** 96 assets with no MRR and no revenue in twelve months plus the 29 listed mobile app assets, cleared at market rather than held for the quoted 8.0x.
- An acquisition mandate in developer tools and analytics with a 2.0x TTM discipline,** funded from disposals, with authority to approach owners who are not listed given that listed supply is eight and seven assets respectively.
- A data remediation deadline before the next capital cycle:** sector tags on 274 assets, country of record on 168, and a decision on the three payment rails where up to half of assets report nothing.
