

THE QUESTION BEFORE ANY OFFER

Can I Trust *These Numbers?*

Reading the TrustMRR dataset — **1,000 revenue-verified digital products**, each connected to a live payment processor. This is a buyer's read of how far that verification actually goes.

1,000

startups in the dataset

\$13.5M

combined monthly recurring revenue

\$133.8M

trailing 12-month revenue

The revenue is *read from the processor*, not self-reported.

100%

1,000 of 1,000 listings connect a live payment provider. The dollar figures come straight from the billing system.

This is the strong foundation: you are looking at booked revenue, not a founder's claim.

WHO PROCESSES THE MONEY · SHARE OF 1,000

Superwall 19 · Paddle 16 · Whop 7 · Creem 6, grouped as "Others."

Verified *is not the same as* complete.

FIELD COMPLETENESS · % OF 1,000 LISTINGS

The dollars are solid.
Everything you'd use to
judge the business is patchy.

Trust the revenue TrustMRR reports.
Traffic, pricing, positioning and asking
price you'll have to source and verify
yourself before you can value anything.

03 · READ THE DISTRIBUTION, NOT THE AVERAGE

The "average" startup here *does not exist.*

48%

of all MRR sits in just the **top 10** companies

26%

Stan alone — \$3.57M MRR — is a quarter of the market

\$284

median MRR — and 197 listings earn \$0

MONTHLY RECURRING REVENUE · HOW THE 1,000 SPLIT

Four things to check *before you believe a listing.*

32

Revenue windows that don't reconcile

Listings whose 3-month revenue is *lower* than their own 30-day revenue — impossible for a trailing window.

129

"Stealth" or unnamed companies

Real revenue, no identity. You can't diligence a brand, a domain or a founder you can't see.

0 / 1,000

Revenue multiples provided

The valuation column is empty for every row. Any multiple you use, you compute and defend yourself.

10 / 100

Median domain rating

Most of these products have almost no organic SEO moat — revenue is bought, not earned by ranking.

A quarter are on the market — *and mostly small.*

262

on sale of 1,000

\$35k

median asking
price

3.2×

median annual-
revenue multiple

THE HEADLINE LISTING

1Lookup — asking \$10.0M on \$207k MRR
(≈4× annual)

30 listings ask \$1M or more; the top of the market is priced
like the top of the market.

ASKING PRICE · 262 LISTINGS FOR SALE

143 listings sit under \$50k — the realistic hunting ground for a solo
acquirer.

THE BUYER'S THESIS

Trust the revenue. *Verify the rest.*

01

Trust the verified revenue

100% of listings bill through a live processor.
The dollar figures are the real asset of this dataset — treat them as fact.

02

Discount everything soft

Traffic, pricing, positioning and asking price are sparse or absent. Source and verify them yourself before you value anything.

03

Hunt the sub-\$50k tail

Ignore the top-10 mirage. 143 listings under \$50k, at a ~3.2× median — reconcile each one, then make the offer.

Verified revenue is the asset. Diligence is still yours to do.
