

Where to Build in Travel & Hospitality SaaS

A data-driven landscape study using TrustMRR

Compset & opportunity-mapping exercise · Frozen dataset (30 Jul 2026), cross-checked against the live marketplace

Two data sources, one method

Structured export

A frozen 1,000-row dataset from TrustMRR — revenue, MRR, growth, category, pricing, audience type, country. Cleaned and analyzed with formulas for market-wide, cross-category statistics.

Live re-check

The actual trustmrr.com site, fetched live, to verify the frozen sample and go deep on categories the random sample underrepresents — like Travel, which is only 8 of the 1,000 sampled rows but 133 real listings.

A random sample tells you the shape of the whole market. The live site tells you the truth about one slice of it. Use both.

The database of verified startup revenues

200K+

Monthly visitors

Verified

Stripe / RevenueCat-verified

revenue — not self-reported

29

Categories tracked

- Revenue, MRR, growth rate, and — for listings marked for sale — asking price and revenue multiple are all pulled directly from a connected payment provider.

636 of 1,000 sampled startups use Stripe, 189 use RevenueCat. 262 of 1,000 are listed for sale at a median ask of \$35,000 (roughly 2–3x trailing revenue).

Travel is one of the smallest categories on the platform

Bar length uses a square-root scale to keep the smallest categories legible. 8 of 1,000 sampled startups are Travel-tagged — smallest count, near-smallest revenue, of 29 categories.

— THE MARKET

Small ≠ weak

Median 30-day revenue

TRAVEL	\$378	\$400
		WHOLE DATASET

Average domain rating

TRAVEL	24.2	16.7
		WHOLE DATASET

- The travel startups that exist earn about what any typical indie SaaS earns, and rank higher on search authority. This category hasn't been tried and failed — it's mostly untried.

133 travel & hospitality startups, one clear pattern

STARTUP	WHAT IT DOES	30-DAY REVENUE
Jungle Bee	Tour & charter booking SaaS, Caribbean	\$517K
Vignette ID	EU toll payments	\$98K
BeamX	Caribbean rideshare	\$23K
Flight Award	Award-ticket finder	\$16K
Yadaphone	Cheap international calls	\$14K
Over The Planet	Custom holiday packages	\$12K
Ave Rides	FL local transport	\$12K
Guest-ops tool — for sale	Vacation-rental guest-ops automation	\$11K
JourneyFuse	Travel-agent CRM	\$11K

Jungle Bee's revenue likely includes processed booking volume, not just take-rate — read platform revenue as gross, not profit.

— THE OUTLIER

\$517,000 /mo

\$20M total revenue · SaaS booking platform (availability + payments) for tour & charter operators — purpose-built for the Caribbean market, not “travel businesses everywhere.”

| The lesson isn't “build booking software.” It's “pick one underserved region and go deep.”

Where the tools actually sit

Booking & reservations infrastructure

The core system of record for taking and managing bookings.

LOW — HOME TO THE BIGGEST OUTLIER

Direct-booking / OTA-independence marketing

Helping a host sell direct instead of paying OTA commission.

VERY LOW — BASICALLY ONE PLAYER

Guest experience & ops automation

Automating check-in, messaging, cleaning, and other guest-facing ops.

VERY LOW

Sales / CRM for hospitality pros

Pipeline, quoting, and client management for agents, caterers, tour operators.

VERY LOW

Consumer trip-planning & travel-utility apps

Helping individual travelers plan, track, or stay safe on trips.

HIGH — MOST OF THE 133 LISTINGS

Marketplaces (rentals, tours, catering)

Two-sided platforms connecting travelers to hosts and operators.

MODERATE

What the data says

- Travel is small but not underperforming. Median revenue per startup roughly matches the whole-dataset median.
- Revenue concentrates in B2B booking infrastructure, not consumer apps. Jungle Bee alone outearns most of the rest of the category.
- OTA-independence tools are nearly absent. A well-known hospitality pain point, barely touched by indie builders.
- Guest-ops automation is validated but tiny — and one comp is literally for sale.
- Niche geography beats generic global product. The strongest performers all won by picking one region, not “travel businesses everywhere.”
- Travel content and SEO authority run higher than average — a viable, underused acquisition channel.

Four ways in

A

Direct-booking / OTA-independence layer

For a specific property type — the domain with essentially one existing player.

B

Guest-ops automation, one property type, one region

A live comp is for sale at \$11K/mo — a buyable starting point, or a narrower build to beat it.

C

Vertical CRM/sales tooling for hospitality sellers

Agents, caterers, tour operators — a domain with almost no dedicated players.

D

Operations layer for restaurants/catering

An adjacent wedge with the same underlying insight, for an F&B background.

What to verify before committing

- The market-size constraint is real, not just a sampling artifact.
- Booking-platform revenue may be gross transaction volume, not take-rate.
- TrustMRR only captures startups that opted to list — enterprise and VC-backed players aren't here.
- Live-site figures are a snapshot and will have moved by presentation time.

Sources

- Spreadsheet: [TrustMRR_Cleaned_EDA.xlsx](#) (Data + EDA_Overview / EDA_Numeric / EDA_Categorical tabs)
- Live site: trustmrr.com, trustmrr.com/category/travel

The crowded part of travel SaaS is consumer apps. The opportunity is what hospitality businesses themselves would pay for.
