

INVESTOR SECTOR BRIEFING

Where Should Capital Go on TrustMRR?

A sector-by-sector read of the verified-revenue marketplace — sizing markets, reading growth, and pricing entry before capital moves.

What is TrustMRR?

“The database of verified startup revenues.”

TrustMRR is a marketplace where founders list SaaS products, mobile apps, and digital businesses — with revenue and MRR pulled directly from payment providers, not self-reported screenshots. For capital looking to deploy into small, cash-flowing software businesses, it functions as a live, sector-tagged deal-sourcing feed.

1,000+

startups tracked

29

sectors tagged

Hourly

data refresh

BUILT BY

Marc Lou

Solo founder • no VC funding, no committee. Also built ShipFast, DataFast, CodeFast — a known name in the indie-hacker / bootstrapped SaaS world.

WHY IT MATTERS TO CAPITAL

- Revenue verified through Stripe/RevenueCat, not self-reported
- 29 tagged sectors to compare across
- Public asking prices & multiples on for-sale listings
- Hourly-refreshed, so numbers stay current

A large enough market to matter

\$1.5B+

Verified revenue tracked across all listed startups

53M

Individual transactions verified through payment providers

200K

Monthly visitors — buyers actively browsing

20+

Acquisitions closing every month — real deal flow

23 days

Average time from listing to acquisition

3%

Flat platform fee keeps deal economics clean

Why source deals here at all

1

Diligence starts pre-verified

Revenue, MRR, growth, and active subscriptions are pulled from the payment provider itself — no chasing screenshots before an offer.

2

No NDA wall to get through

Core proof metrics are visible before the first call, which means faster screening across many targets at once.

3

Pricing is public and comparable

Asking price and revenue multiple sit next to every for-sale listing, so cross-sector price discovery is immediate.

4

Deals actually close

20+ acquisitions per month and a 23-day average close — this is a market with real, observable clearing activity, not just window shopping.

PART TWO

Where Should the Capital Go?

Sizing, growth, and pricing across 12 sectors · dataset frozen 30 Jul 2026

Twelve sectors, one deal-flow feed

\$133.8M

Total 12-month revenue tracked across all tagged startups

51.6%

of tracked revenue sits inside just these 12 sectors we benchmark next

726 startups across 29 tagged sectors; the 12 largest cover 460 of them.

12-MONTH REVENUE BY SECTOR (\$M)

THE BIG PICTURE

Growth vs. market size, by sector

MoM MRR growth (winsorized mean, %)

B2B mix as a stickiness proxy

B2B revenue tends to be stickier — longer contracts, higher switching costs, less impulse churn. Sectors skewing B2B carry a quality premium beyond their headline growth number.

READ

Marketing and Dev Tools pair strong B2B mix with strong growth — the combination that matters most for durable revenue.

AI, Mobile Apps and Health & Fitness stay consumer-heavy — expect more churn volatility per dollar of MRR.

What it costs to actually buy in

1.20x

Cheapest median entry multiple
— SaaS

3.95x

Most expensive median multiple
— Education

54

AI listings currently for sale —
deepest deal pool by far

56%

of all Mobile Apps listings are
for sale — an oversupply flag

GROWTH PER DOLLAR OF MULTIPLE

Dev Tools stands out: 17.2% mean MoM growth at a 1.35x median multiple — the cheapest pricing of any high-growth sector in this set. Analytics offers a similar combination (15.2% growth, 3.40x). By contrast, Education is expensive for its growth (3.95x for 8.4%), and Sales is priced high (6.4x, n=13) against negative growth — a combination worth avoiding.

THE VERDICT

Buy, watch, or avoid — by sector

BUY

Marketing

Analytics

Dev Tools

High growth (9–17% MoM), B2B-heavy (63–79%), and — for Dev Tools — priced cheaply at 1.35x. The combination that matters: durable revenue, growing fast, not overpaying to get in.

WATCH / SELECTIVE

AI

SaaS

E-comm

Education

Real markets with real deal flow, but each needs individual diligence: AI is crowded and commoditizing, SaaS is cheap but slow-growing, Education is priced rich for its B2B mix.

AVOID

Content Creation

Mobile Apps

Health & Fitness

Content Creation revenue is contracting (–2.6%). Mobile Apps growth is flat and 56% of listings are already for sale — a supply glut. Health & Fitness is weak-growth and almost entirely consumer-churn exposed.

One way to size the allocation

Not a precise optimization — a starting framework for splitting a deployable pool across conviction tiers, weighted toward the sectors with the best growth-to-price combination.

- BUY — Marketing, Analytics, Dev Tools
- WATCH — AI, SaaS, E-comm, Education (selective)
- DRY POWDER — held for opportunistic entries

Within 'Buy', Dev Tools offers the best entry economics (1.35x for 17.2% growth); within 'Watch', price each AI deal individually — the sector is large but increasingly commoditized.

Risks and caveats in this data

Small-sample sectors

Analytics (n=19) and Social Media (n=18) medians can swing hard on just one or two companies — treat their growth numbers as directional, not precise.

30-day growth is noisy

MoM MRR growth ranged from -100% to +12,983% in the full dataset — a single low base month can distort a sector average; we winsorized to reduce this, but it doesn't eliminate it.

Revenue $\neq$ profit

Multiples here are priced on revenue, not margin or EBITDA. A cheap revenue multiple can still be an expensive acquisition if the cost base is heavy.

Platform selection bias

TrustMRR skews bootstrapped and solo-founder. It's a real, active market — but not representative of VC-backed or enterprise-scale opportunities.

BOTTOM LINE

Chase B2B-heavy growth, priced fairly.

Marketing, Analytics, and Dev Tools combine the growth, stickiness, and entry pricing that a disciplined allocator wants. Treat AI as a volume market that needs per-deal selectivity, and steer around sectors showing contraction or oversupply — Content Creation and Mobile Apps chief among them.
