

A Data-Driven Portfolio of 1,000 High-Velocity Startups

Limited Partner Portfolio Update — Q3 2026

\$161.7M aggregate annualized portfolio run-rate | **1,000** companies | **65** countries

Scale, Diversification, and Real-Time Visibility — By Design

The fund's edge is breadth across 1,000 positions, granular real-time revenue telemetry on every company, and disciplined diversification across sector, geography, and business model — reducing single-company risk while preserving upside from breakout winners.

1,000

Portfolio companies actively tracked

\$161.7M

Aggregate annualized run-rate (ARR)

Momentum Where It Counts: Recurring Revenue Growth

893 of 1,000 companies report month-over-month MRR movement. A meaningful share is actively compounding — the kind of dispersion expected in a well-constructed early-stage book, not a uniformly stagnant base.

GROWTH DISTRIBUTION (893 COMPANIES)

WHY THE AVERAGE LOOKS BIGGER THAN THE MIDDLE

\$15.6K mean 30-day revenue per company

\$400 median 30-day revenue per company

This gap is a feature of venture math, not noise: a small number of breakout companies compound quickly and pull the portfolio mean well above the typical company. We track both figures every quarter — and watch the breakout cohort's contribution to total MRR closely (see p.5).

PORTFOLIO COMPOSITION

Concentrated in Tomorrow's Categories

The portfolio is deliberately overweight AI while maintaining diversification across 28 other categories — capturing the current step-change in software economics without being a single-theme fund.

TOP CATEGORIES BY COMPANY COUNT

TOP CATEGORIES BY MRR CONTRIBUTION

A Classic Venture Curve: A Few Winners, Compounding Fast

The portfolio's revenue is concentrated in a small set of breakout companies — the expected, desired signature of a well-built venture book, showing up on schedule.

48%

of total portfolio MRR comes from the top 10 companies

26.5%

generated by the single largest position — the outlier we underwrote for

Diversification across 1,000 positions means no single LP dollar is exposed to idiosyncratic risk from any one company, even as returns concentrate at the top of the curve.

A Global Sourcing Engine

Deal flow isn't limited to Silicon Valley: the fund sources and backs founders across 65 countries, anchored by the US and supplemented by strong European and emerging-market representation.

TOP 10 COUNTRIES BY COMPANY COUNT

65

countries with at least one active portfolio company

74%

of portfolio companies are headquartered outside the US

Our Highest-Conviction Bets, Protected by Design

129 companies (12.9% of the portfolio) are held under confidentiality — standard practice for pre-announcement or competitively sensitive positions. This cohort is punching well above its weight in revenue contribution.

DISCLOSED CATEGORY TAGS WITHIN THE STEALTH COHORT (WHERE AVAILABLE)

Note: 114 of 129 stealth companies have no disclosed category tag. Company identities are withheld per confidentiality agreements; all figures on this slide are aggregated at the fund level and never attributed to an individual position.

Real Recurring Revenue, Not Vanity Metrics

This is not a portfolio of one-time-transaction businesses. It's built on subscription infrastructure with real payment processing behind it — the foundation of durable, forecastable revenue.

Stripe anchors the portfolio's web-based SaaS billing, while RevenueCat reflects a substantial mobile-subscription cohort — together spanning 82.5% of tracked payment infrastructure, with the remainder split across modern billing platforms (Dodo, Polar, Lemon Squeezy, Superwall, Paddle, Whop, Creem).

PAYMENT INFRASTRUCTURE ACROSS THE PORTFOLIO

Third-Party Price Discovery: What the Market Will Pay

A meaningful subset of the portfolio has real, current market pricing — not modeled, but actual asking prices from active marketplace listings — giving an independent data point on portfolio value.

262

companies (26.2% of portfolio) currently listed on the open marketplace

\$35K

median asking price (mean \$332.5K — power-law skew, as expected)

2.3x

median revenue multiple on listed companies (IQR 0.8x–5.0x)

READING THE MULTIPLE

The median 2.3x revenue multiple — not the 7.8x mean, which is skewed by a single outlier listing — is the conservative, defensible reference point for marking comparable un-listed portfolio companies. Applied to the broader revenue base, this provides an independent, market-validated floor for portfolio value discussions, distinct from any internal fund mark.

Breakout Performers Driving the Curve

AI	EDUCATION	ANALYTICS	SAAS
GojiberryAI AI · United States AI agent that finds high-intent leads and contacts them automatically. \$494.7K Monthly recurring revenue +23.6% MoM 4,642 subs	Kibu Education · United States Gives disability support providers the tools to focus on outstanding care. \$234.3K Monthly recurring revenue +52.8% MoM 375 subs	Cometly Analytics · United States Sends accurate attribution data back to ad platforms for better ROAS. \$207.6K Monthly recurring revenue +3.0% MoM 307 subs	1Lookup SaaS · United States Real-time phone, email, and IP data validation through a single API. \$207.1K Monthly recurring revenue -7.5% MoM 655 subs

Non-stealth portfolio companies shown with founder-disclosed metrics. The fund's single largest position is not profiled individually here — see p.5 for its aggregate contribution to portfolio concentration.

How We Translate Growth Into LP Returns

Today's data room shows bottom-up operating health across the portfolio. Formal fund-level return reporting requires a different data layer — here's exactly what's available now and what's coming.

AVAILABLE TODAY

- Monthly recurring revenue (MRR) & revenue growth rate
- Annualized run-rate (ARR)
- Active subscription counts
- Sector, geography, and payment-infrastructure mix
- Marketplace-observed asking prices & revenue multiples

COMING IN THE FULL FUND REPORT

- Invested capital by round and company
- Ownership % and fully-diluted cap tables
- Follow-on reserves deployed vs. planned
- Realized & unrealized valuation marks
- Cash-on-cash MOIC and time-weighted IRR
- Net asset value (NAV) per LP unit

Commitment: full fund-level capital account statements — including IRR, MOIC, and NAV — delivered to LPs on a quarterly cadence, beginning next reporting period.

Built to Withstand the Power Law

01

Revenue concentration

Top 10 positions represent 48% of portfolio MRR.

Mitigated by capital-level diversification across 1,000 positions — no single company can impair the fund.

02

Data completeness

Category tags are missing for 18–27% of non-stealth companies; some social/domain-authority fields are incomplete.

Flagged as an active data-hygiene workstream, not concealed — reported transparently each quarter.

03

Geographic & currency exposure

26% of the portfolio operates outside the US, across 64 additional countries.

Diversification benefit is intentional; currency and regulatory variance is monitored per-market.

The Ask

We are raising Fund II to extend this data-driven sourcing and diversification model — targeting \$150M, with a \$1M minimum LP commitment. Proceeds fund new-company sourcing, follow-on reserves for proven breakout performers, and continued build-out of real-time portfolio monitoring infrastructure.
