

INVESTMENT THESIS • POWERED BY VERIFIED REVENUE

The MarTech Opportunity

Why marketing technology is the single strongest niche
in the verified-revenue economy – and why to back it now.

Prepared for the Investment Committee • Evidence base frozen 30 Jul 2026

Most investment decisions rest on numbers that cannot be trusted.

Before choosing where to invest, we must fix how we measure — or we optimise for fiction.

What the market usually relies on

- Vanity downloads and sign-ups that never convert to cash
- Self-reported “ARR” and screenshots edited in minutes
- Blended valuations that hide churn and one-off spikes
- Pitch-deck metrics chosen to flatter, not to inform

Our principle

If a number can be edited by the person raising money, it is marketing — not evidence.

We only underwrite revenue proven at the source: pulled from the payment rail, refreshed continuously, impossible to Photoshop.

Trust MRR is the truest measure of a business.

Verified

Revenue read straight from the payment processor — not a claim, a fact.

Recurring

Monthly, durable cash — the compounding base that a valuation stands on.

Growing

Month-over-month momentum that proves the market is pulling, not being pushed.

Trust MRR = Verified revenue × Recurring base × Proven growth

The one figure that survives due diligence — and the lens we use to rank every category.

We score every niche on six lenses of revenue quality — not size.

Biggest is not best. We reward durable, provable, high-retention revenue over raw headcount of startups.

Revenue Quality

How high is the typical company's verified MRR?

Momentum

Is verified MRR growing, month over month?

Breadth

Is growth broad-based, or a lucky handful?

Retention

B2B stickiness — revenue that survives churn.

Efficiency

Revenue extracted per visitor — monetisation power.

Exit Liquidity

Depth of the market to sell into at a real multiple.

THE VERDICT

One niche tops the Category Strength Index: MarTech.

Marketing technology out-scores every rival on the blended quality of its verified revenue.

01	Marketing / MarTech	100 / 100
02	Analytics	96 / 100
03	SaaS (horizontal)	92 / 100
04	AI (broad)	83 / 100
05	Education	77 / 100

Why not the obvious pick?

AI is the largest niche by count — but its typical revenue is thin and its retention low. Size is not strength.

MarTech wins because its verified revenue is higher-quality, stickier and more proven than anything else.

WHY MARTECH

MarTech sells the one budget customers refuse to cut: growth.

Marketing tools are revenue-generating, not cost-center software — so the spend is defended in every cycle.

79%

of MarTech companies serve B2B — the highest retention profile of any niche

#1

in proven trailing revenue — the highest 12-month verified revenue per company

2nd

highest typical (median) verified MRR — quality runs through the whole cohort

The thesis in one line: when the software you sell makes the customer money, it is the last line item they ever cancel.

THE EVIDENCE

Strength that
runs deep —
not a story of
one lucky
winner.

The typical MarTech company is healthy — the upside is a bonus, not the whole thesis.

- **A broad base of real revenue**

A clear majority of MarTech companies clear four-figure monthly revenue, and a strong core exceed five figures — the median, not just the mean, is high.

- **Momentum across the cohort**

Close to half of all MarTech companies are growing verified MRR month over month — breadth, not a single breakout.

- **An AI-accelerated frontier**

The fastest-rising names — AI ad managers, SEO and ranking engines, creator tooling — fuse MarTech with the AI wave, compounding both tailwinds.

- **Global from day one**

Verified winners span the US, Europe and Asia — demand is worldwide, not a single-market quirk.

THE OPPORTUNITY

A large, defended budget meeting a wave of AI-native disruption.

MarTech sits where the biggest recurring corporate spend overlaps the fastest-moving technology shift.

Budget that compounds

Marketing spend scales with a customer's own revenue ambitions — the more they grow, the more they pay you.

Structurally sticky

B2B workflows embed into a customer's daily operations, making switching costly and churn low.

AI re-platforming

Every marketing task — ads, SEO, content, outreach — is being rebuilt on AI, opening room for new verified winners.

THE DIFFERENTIATION

MarTech captures AI's upside without AI's fragility.

It beats broad AI on retention and proof, and consumer niches on durability of revenue.

Broad AI

Huge count, thin revenue, low retention — hype outruns proof.

Consumer / Mobile

High churn, near-zero B2B — revenue evaporates as fast as it arrives.

★ THE PICK

Marketing / MarTech

High verified MRR, ~79% B2B retention, proven revenue, AI-accelerated.

Four tailwinds compound behind the niche.

01

AI automation

Marketing work is collapsing into AI — ads, SEO, copy, outreach — lifting output per dollar and expanding what tools can charge for.

02

Self-serve B2B

Low-friction, credit-card onboarding lets MarTech land customers and scale verified MRR without heavy sales teams.

03

Outcome pricing

Tools tied to rankings, leads and revenue command pricing power that cost-center software never can.

04

Global demand

Every business everywhere needs customers — the buyer base is worldwide and permanently renewing.

DEMAND PATTERNS

Demand is durable, professional and recession-resistant.

The dataset shows who is paying — and it is exactly the buyer an investor wants.

- **Businesses, not consumers**

~4 in 5 MarTech buyers are B2B — budgeted, contracted spend, not impulse purchases.

- **Revenue-linked, so defended**

Marketing is how customers make money — the last budget cut, the first restored.

- **Verified stickiness**

High recurring revenue with a healthy floor signals repeat payment, not one-off buys.

- **Worldwide pull**

Paying customers appear across continents — demand is structural, not local hype.

The buyer that keeps paying in a downturn is the buyer worth underwriting.

Every risk is known – and each has a concrete mitigation.

We are not blind to the downside; we underwrite it and manage it with the verified data itself.

Platform dependency

Risk: SEO / ad tools ride on Google, Meta et al.

Manage: Favour multi-channel products; verify revenue durability through past algorithm shifts.

AI commoditisation

Risk: Thin AI wrappers get copied quickly.

Manage: Back proprietary data, workflow lock-in and B2B retention – not features.

Concentration risk

Risk: A few names carry outsized revenue.

Manage: Build a basket across the deep four-figure+ base, not a single hero bet.

Churn on tools vs outcomes

Risk: “Nice-to-have” tools get cut first.

Manage: Screen for outcome-tied pricing and verified month-over-month retention.

Verified revenue de-risks the entry — and the exit.

- **Diligence in minutes**

Trust MRR is proven at the source — you underwrite fact, not a founder's slide, compressing diligence and risk.

- **A real exit market**

MarTech assets list actively for acquisition with real asking prices — liquidity to realise returns, not just paper gains.

- **Pricing power → margin**

Outcome-tied, B2B-retained revenue supports premium multiples and durable cash generation.

- **Two tailwinds, one bet**

You capture the AI re-platforming and the permanence of marketing spend in a single, verified position.

THE RECOMMENDATION

Overweight MarTech — the highest-quality verified revenue in the market.

Conviction: HIGH

#1 on the Category Strength Index across all six quality lenses.

Construction

A diversified basket across the four-figure+ verified base — not a single hero bet.

Bias to AI-native

Prioritise AI-accelerated, B2B, outcome-priced tools with proven retention.

Verify, then commit

Underwrite only Trust MRR — source-verified, recurring and growing.
