

ACQUISITION CASE

Speel.co

AI-generated UGC video ads | Should we acquire this listing?

Sourced from TrustMRR's verified-revenue marketplace. This deck evaluates the listing on its own numbers — growth, price, comparables, and the diligence flags an investor should raise before offering.

COMPANY SNAPSHOT

A 12-month-old AI video tool, already at a \$790K run-rate

Speel.co generates lifelike, influencer-style AI avatar videos that hold and talk about a product — built for brands, agencies, and solo creators who need TikTok/Reels/Meta-ready UGC ads without a shoot.

Founded	August 2025, France
Founder	Yann (solo) — 1.0/5 trust score, 1 review on file
Category	AI · SaaS · Content Creation · Marketing
Pricing	Starter \$49/mo · Growth \$109/mo · Pro \$139/mo
Revenue verification	Stripe API — live-verified, not self-reported

The headline number: 253% month-over-month growth

\$180,966

all-time revenue since Aug 2025 launch

\$790K

implied ARR run-rate at current MRR

30%

reported profit margin

Illustrative MRR trajectory implied by reported growth rate

Read this carefully

253% MoM off a small base is common for month-3-4 products and mathematically can't continue — the question for an acquirer isn't the growth rate, it's what happens once the base gets large enough that the rate has to normalize.

A crowded, fast-moving category with low switching costs

AI UGC-style ad video generation exploded through 2025-26 as Meta/TikTok ad creative costs rose and AI avatar quality crossed a believability threshold. The category now has many close substitutes — CreateUGC, UGCVideo.ai, and others offer nearly identical avatar-video workflows.

What differentiates Speel

Product-holding AI avatars, 100+ licensed actors, 35+ language voiceover, script/hook generation built in — a fuller workflow than single-feature competitors.

What doesn't

The core capability — avatar talks about a product on camera — is now table stakes across at least 3-4 well-funded competitors, with no visible patent or proprietary model moat.

Distribution signal

Ahrefs Domain Rating of 29/100 is low for a product at this revenue — growth likely leans on paid ads and creator/influencer promotion rather than durable organic search traffic.

Subscription tiers, gated by a credit system

Starter

\$49/mo

Entry tier — limited credits, single-video testing

Growth

\$109/mo

Mid-tier — likely the median paying-customer plan

Pro

\$139/mo

Top tier — agencies/teams running volume

\$65,843 MRR ÷ 1,115 active subscriptions = ~\$59 average revenue per subscriber — consistent with a customer base clustered near the Starter/Growth tiers, not the Pro tier.

Known friction point

Public reviews describe trial credits (10) as insufficient to generate even one full video (~100 credits needed), with credits expiring in 24 hours and no goodwill top-ups from support. This is a top-of-funnel conversion risk worth pricing into any retention/churn assumption.

VALUATION

Priced at 0.6x ARR — cheap for the growth rate, or a red flag?

\$500,000

Asking price

0.63x

Price ÷ ARR run-rate (\$790K)

~7.6x

Price ÷ monthly MRR (common micro-SaaS shorthand)

How that compares to other TrustMRR listings (price ÷ ARR)

Post Bridge	Social media scheduler, mature	9.1x
Fiddl.art	AI images/video, usage-based	4.7x
Atlas	AI study tool for students	6.7x
Groups Watcher	Lead-alert tool	2.0x
Speel.co (this deal)	AI UGC video, 253% MoM growth	0.63x
AI Website Builder	Mature no-code, flagged as slowing	0.7x

The insight: a product growing this fast would normally command a premium multiple. Instead it's priced near the two comps flagged for durability concerns — the market may already be discounting for churn/quality risk.

DILIGENCE FLAGS

Four things to verify before wiring any money

Founder track record is unproven

Solo founder with a 1.0/5 trust rating from just 1 review — too thin a sample to judge, but worth direct reference checks before closing.

Growth may not be organic or durable

Domain Rating of 29/100 suggests weak organic/SEO footing; a 253% MoM run in month 3-4 is typical of a paid-acquisition or virality spike, not necessarily a repeatable channel.

Documented customer trust complaints

Trial-credit and refund complaints on Trustpilot point to funnel and support-quality issues that could show up as elevated churn once early-adopter enthusiasm fades.

Revenue history is short

\$180,966 all-time revenue since an August 2025 launch means there's under 12 months of data — no full seasonal cycle, no proof the growth rate survives a slowdown.

Bull case vs. bear case

BULL CASE

- Verified Stripe revenue, not self-reported — real diligence starting point
- 30% profit margin already, pre-scale — the unit economics work today
- 1,115 paying subscribers is real product-market signal, not just traffic
- Priced at 0.63x ARR is a steep discount if the growth rate is even partly durable
- Full workflow (avatars + script + multilingual voice) is stickier than single-feature tools

BEAR CASE

- Low domain authority (29/100) means growth likely rents attention via paid/creator channels — costly to sustain post-acquisition
- Category has multiple close substitutes with similar avatar-video workflows — thin moat
- Solo founder, sub-12-month track record, minimal reputation data on file
- Credit-model complaints suggest funnel friction that could suppress future conversion and inflate churn
- 253% MoM cannot continue — next 2-3 months of actual (not extrapolated) numbers matter more than the headline

Conditional yes — structure the deal around the risk, not the headline

1 Request 3 months of raw Stripe cohort data

Verify the 253% MoM figure isn't a single spike; check month-2 retention of month-1 cohorts specifically.

2 Negotiate an earn-out structure

e.g. \$300K upfront + \$200K contingent on 6-month MRR retention above a set floor — shifts durability risk back to the seller.

3 Independent founder reference check

1 review is not enough signal — talk to past collaborators or customers directly before wiring funds.

4 Budget for a paid-acquisition dependency

Plan post-acquisition spend assuming growth is largely paid/creator-driven, not organic, until proven otherwise.
