trustmrr.com

Founded by indie hacker Marc Lou to power the “build-in-public” movement.

1

A verified revenue database. Every MRR and revenue figure listed is authenticated directly through a connected payment provider (Stripe, RevenueCat, Polar, Lemon Squeezy and others) — not a self-reported screenshot.

2

An acquisition marketplace. Founders list their startups to prove traction publicly; investors and acquirers browse the same listings to find profitable, revenue-verified startups that are actively for sale.

3

A benchmarking tool. Because figures are payment-provider-backed, investors can use the data as a credible first-pass signal before deeper financial due diligence.

4

Our source for this proposal. We pulled a frozen snapshot of 1,000 listed startups (30 Jul 2026) and screened it end-to-end to surface the strongest investment candidates.

X (Twitter) Followers

Reach is heavily skewed: a handful of breakout accounts pull the average ($\approx 4,070$) far above the typical startup (median ≈ 66 followers), so raw follower count should be read alongside revenue — not as a stand-alone signal.

Top 3 Payment Providers

Stripe	644 startups · 64%
RevenueCat	191 startups · 19%
Dodo Payments	50 startups · 5%

Reading the Split

Stripe verification covers 64% of all listed startups — the clear default rail for solo founders and small SaaS teams. RevenueCat, used mainly for mobile subscription apps, is a distant second. The long tail (Dodo Payments, Polar, Lemon Squeezy, Superwall, Paddle, Whop, Creem) reflects niche billing needs — mobile paywalls, EU-friendly merchants of record, and indie-hacker-first checkouts.

How the ranking was built: Companies are ranked by all-time revenue (the fullest measure of cumulative traction). The 30-day, 3-month and 12-month figures alongside it show whether that revenue is recent and consistent rather than a one-off spike, while MRR and its 30-day growth rate indicate current momentum — together giving a rounded view of scale, durability and trajectory.

Active Subscriptions

As with followers, active subscriptions are top-heavy: a small number of startups (led by Stan) carry six-figure subscriber bases while the typical listed startup runs a lean, early-stage subscriber count.

Top 5 At a Glance

Audience Type & Category

Among startups that disclose an audience, consumer-facing (B2C) products edge out B2B — typical of the low-friction, self-serve SaaS and app tools that dominate build-in-public listings.

Top 3 Categories by Startup Count

AI	197 startups
SaaS	66 startups
Mobile Apps	52 startups

AI-labelled startups alone account for more listings than any other single category, followed by general SaaS and mobile apps — a reflection of how quickly AI-wrapped tools are being built and monetised on TrustMRR.

Asking Price & Revenue Multiple

Median sits well below the average — most listed startups price modestly (2–3x revenue), while a handful of high-growth outliers command double-digit multiples and pull the average up.

Top 3 Startups by Asking Price

Startup	Asking Price	Revenue Multiple
1Lookup	\$10M	2.1x
Project A	\$5M	4.9x
POST BRIDGE	\$4.21M	8.2x

Why This Matters

Revenue multiple is the fastest gut-check on whether an asking price is fair: a low multiple on real, verified revenue signals an under-priced, cash-generative business, while a very high multiple usually reflects a bet on future growth rather than current earnings.
